BIRMINGHAM, ALA.—Under the name of the Birmingham Florist and Horticultural Society, the florists of this city have organized and will give two semi-annual shows. The organization has been perfected with Hugh Seals, president; G. B. McVay, vice-president; Andrew Hague, treasurer; Alex. Sawyer, secretary.

The membership of the society will be composed of florists, landscape gardeners and park gardeners, and its objects will be to encourage greater efforts among amateur growers as well as providing for an interchange of ideas among professional growers. The society will meet on the first Tuesday in each month.

250 of any one variety at 1000 rate.

NOVELTIES FOR 1908

HARVARD. Glowing crimson (the real Harvard color). This variety will take the place of all other crimsons as it is very free and the blooms are of the finest as to size and quality. It is a very rapid grower and the habit is ideal. Rooted Cuttings, \$12.00 per 100, \$100.00 per 1000. January Delivery.

FAUST. A brilliant scarlet. This variety will replace all of the commercial varieties of this color owing to its extreme productiveness, many plants last December having 20 buds and blooms to the plant. A fine one for the Xmas trade. Rooted Cuttings, \$6.00 per 100, \$50.00 per 1000. January Delivery.

REMEMBER WE GUARANTEE SATISFACTION.

FARNAM P. CAIRD

271 River St. TROY, N. Y.

WE HAVE A NICE, CLEAN LOT OF STRONG PLANTS OVER AFTER PLANTING, WHICH WE OFFER AS LONG AS THEY LAST, AS FOLLOWS:

Mrs. M. A. Patten, Crimson Glow, Enchantress

at \$8.00 per 100.

We have also some extra strong plants of Welcome at \$12.00 per 100. This variety is decidedly the best sport of Mrs. Lawson; it is rose pink in color and far superior to the parent. The New York Florists' Club award committee who saw it growing, scored Welcome over 90 points.

REVIEW OF THE MARKET

NEW YORK.—Monday was one of the worst days seen in years; it rained almost continuously all day, and at times the downpour was so heavy that it almost resembled a cloud burst. Little or no business was doing on that day, and stock that came in was simply stored away for future use.

Business in general is almost equal to the average for the time of the year. Some good roses are now being received, of American Beauty, Bride, Bridesmaid, Mme. Abel Chatenay and Richmond, for which fairly good prices are being obtained. There is also quite a supply of mildew and otherwise inferior roses coming in, for which but a nominal figure is asked, and not all of them can be disposed of.

Carnations are much more plentiful, but are, for the most part, short in stem; the fancy grades have not appeared as yet.

Chrysanthemums of such varieties as Mme. Gastellier, Marquis de Montmort and Monrovia, are coming in regularly.

Violets are in daily supply; they are rather light in color, and the odor is somewhat weak, yet they are violets, and range in value from 10c. to 30c. per 100.

Asters will no doubt have been damaged by the heavy rains, in many localities. There are plenty of them on the market, but few are of a grade that will fetch more than \$1 per 100; a great many will probably not realize half that price.

Cattleyas are getting a little more plentiful every day; the demand during

PHILADELPHIA.—There has been considerable more activity in the flower market this week, but stock is such that one has to move a lot of it to make any showing as to dollars. We are deluged with dahlias now; there are five large growers shipping to this market, and while some choice cactus and decorative varieties have sold at from \$3 to \$4, such sales are few. Really no reasonable offer is refused as the flowers are so plentiful.

For American Beauty roses, \$3 per dozen is asked for the best. Tea roses are improving in quality; Killarney, Bridesmaid and Kaiserin Augusta Victoria have sold this week at \$6 to \$8 per 100; the first named has been in good demand.

Of carnations such varieties as Winsor, Enchantress and Beacon have brought \$3 per 100 for the choicest flowers. Cattleyas, at 75c. each, are more plentiful, but not sufficiently so to fill demands as yet. Asters are getting poorer every day. John McIntyre had the first chrysanthemums of the season; the variety was Monrovia.

Asparagus and smilax have been in better demand. DAVID RUST.

INDIANAPOLIS, IND.—Market reports from various quarters indicate that trade is not keeping apace with the first part of the month. Counter business and decorating are fairly good but little funeral work is required. Stock, particularly the poorer grades, has accumulated in such quantities that prices are suffering. A variety of high grade flowers is not available as roses.

Group of Washingtonians at the Vincent Onting.

the last few days has been quite slow.

The best lilies are still bringing 8c. and from that down to 4c. each, according to the quality. Dahlias do not seem to be taking as well as in former years, through some cause or other; there are plenty of good flowers coming in, too, but they are selling at quite low figures.

Gardenias and lily of the valley are in regular supply, with no change in values. Cosmos is being received in quantity daily, as are tuberose.

CHICAGO.—The sudden change to cold weather which followed the extreme heat of the preceding week has made a remarkable change in market conditions. In the suburbs of Chicago on Sunday in the early morning still water was well coated with ice and frosts have been reported from all sections.

Although the call is not heavy, the practical elimination of outside stock has helped to strengthen the prices on greenhouse products.

Roses are of better quality and selling well though at only medium prices. Carnations are getting so much more plentiful that the demand has hardly equaled the supply; and the rough weather has hit the asters so hard that the receipts are hardly salable.

CUT ROSES

AMERICAN BEAUTIES, BRIDESMAIDS, BRIDES and METEORS. SPRENGERII, 25c. per bunch.

Good stock. Send for price list.

BRANT BROS., Utica, N. Y.

The growers are busy potting up field chrysanthemums, and all look to be nice, large clean plants. Among those who have fine stock are Felter, Windler, Beyer, Schray and Sanders. Roses are looking very well, having good color. American Beauty have a great call, and it seems that all grades sell out clean, but of the smaller sorts, such as Bride, Richmond, Killarney and Bridesmaid, there are too many coming in for the demand. Long American Beauty bring from \$2 to \$4 per dozen; others \$1 to \$1.50 per dozen; the smaller sorts from \$1 to \$4 per 100.

Carnations are having a good call, but not over \$2 per 100 is obtained for the best, owing to short stems; bloom and color are good.

Lily of the valley sold well last week at \$3 and \$4 per 100. From the outside quite a lot of stock is being cut, such as dahlias, tuberose, cosmos and asters, which have quite a call. Among the green stock, smilax is in plenty and sells well. Ferns, asparagus and galax, too, have a good demand. Quite a lot of wild smilax has to be ordered for next week's decorations.

ST. PATRICK.

BOSTON.—Business has been slow this week. Flowers of all kinds are plentiful, especially roses and asters; of the former there is a glut of small sized blooms. American Beauty roses are good. White carnations sell well, while there is little call for colored ones. Lily of the valley is going slow. Lilies are not so plentiful. Gladioli are still abundant. Violets have made their appearance, but there is no demand for them as yet. J. W. D.

St. Louis, Mo.

News Notes

Arnold Ringier, traveler for the W. W. Barnard Company of Chicago, is in the city interesting the trade in seeds, bulbs and supplies of all kinds. J. J. Karins, a representative of Henry A. Dreer, Philadelphia, was also with us in the past week, and reports a big trade in decorative stock and other plants. A. C. Canfield of Springfield, Ill., was likewise making friendly calls on the trade. The Canfield Company are sending to Kuehn a fine lot of roses, asters and other seasonable flowers.

The St. Clair Floral Company at Belleville, Ill., made a fine display of plants, both decorative and blooming, also cut flowers, at the County Fair, held at this place last week. According to reports it was the most attractive booth at the fair. A. S. Halstead and his son Kester attended each day. C. A. Kuehn recently paid a visit to J. F. Ammann at Edwardsville, Ill., and says that Mr. Ammann's Killarney, Bride, Bridesmaid, Ivory and Mme. Abel Chatenay roses are in fine condition to produce a lot of first-class stock this season. His carnations, too, are very fine. All this stock is handled by Mr. Kuehn.

Robert Thompson is putting in a new boiler for C. C. Sanders and remodeling his show house on Clark avenue. In time this will be the best retail stand in the city to catch the better class of trade.

W. J. Pilcher at Kirkwood has about finished his new houses and will soon be in shape to supply the market with some good carnations and violets. He will also have sweet peas for Christmas. This year he has planted heavily of the new lavender sweet pea,

Mrs. Alexander Wallace, for which there should be a big demand.

George Waldbart, who has been traveling in Europe a good part of the Summer, returned home on Saturday, September 21.

J. W. Schuette & Company, who operate the South St. Louis Nurseries at 5600 Gravois avenue, have just issued their Fall catalogue which is full of good things for the local trade. They report a very busy season in tree planting, also hardy shrubs.

Adolph Brix, the North St. Louis florist, has written a German play in two acts, which he will present at one of the social entertainments to be given by the trustees of the Florists' Club this Winter.

W. C. Smith & Company's place looks neat and clean this week. A coat of paint and new wall paper give it a fine appearance. They received last week, a large shipment of flower pots and pans in all sizes, also a new lot of supplies.

The downtown florists made up a number of large funeral designs last Saturday for the funeral of the noted horseman, J. S. Bratton, at East St. Louis. Riessen Floral Company and Foster Floral Company had the bulk of the work. Alex. Siegel had a horse, life size, to make, which took a night's work. ST. PATRICK.

Cincinnati.

News Notes.

Business remains fair considering the hot spell and all good stock sells; no change in prices. Asters are not very good property now, but good late ones, with long stems, will fetch 2c. and 3c. Chrysanthemums will not reach this market yet for a couple of weeks; the flowers are developing slowly.

Superintendent Rodgers has recovered from a severe attack from eating "broiled lobster" while in Philadelphia; \$65 is a pretty good price to pay for one lobster.

President Witterstaetter of the Cincinnati Florists' Society says that Afterglow carnation is looking fine at all the distributing points. Aristocrat is good also, and both sorts are hard to beat. Still he says his new seedlings are extra fine; he has some now with stems two feet long and fine flowers.

R. A. Betz & Company is now the style of our firm of wireworkers. They certainly do good work and are prepared to turn it out quickly.

Samuel Batson of Kalamazoo, Mich., writes me that Mrs. Batson and the boys sail on September 28 from Glasgow for America, and that they have had a delightful trip through Scotland and England.

J. A. Peterson and wife will arrive home in about three weeks; when last heard of they were in Paris.

E. G. G.

FIRMS WHO ARE BUILDING.

HICKSVILLE, I. I.—Jantzen & Hoebel, florists and nurserymen are building a greenhouse to be used for pot plants.

ELDORADO, KAN.—Wm. Noble, who has taken sole charge of the Noble greenhouses, is enlarging and adding to both space and plants.

Detroit, Mich.
Trade Notes.
While there was not as much funeral work to keep the craft busy as in the last few weeks, there is a healthy increase in counter trade. Carnations are slowly appearing in larger numbers and of better quality. Some very heavy showers are putting asters out of business and we are looking forward to a great scarcity of flowers. A few violets are seen around some stores.
Robert Klage has his extensive alterations about completed; these include two new Atlas boilers, two greenhouses, each 40x150 feet, and smaller changes.
A. E. Lutey and Brother, owners of the Lakeside Floral Company, of Houghton, Mich., were in the city looking for good things in carnation plants.

Club News.
September 18, the regular meeting night of the Detroit Florists' Club, witnessed a good attendance principally on account of election of officers. The result was: President, J. E. Scribner; vice-president, Thomas Brown; secretary, J. F. Sullivan; treasurer, Walter Taepke; librarian, Albert Sylvester.
F. D.

ROCHESTER, N. Y.—William C. Barry is president of a recently formed organization of business men here for the purpose of advancing the interests of the city toward a Greater Rochester.

New Orleans, La.

News Notes

At the September meeting of the Horticultural Society, held at the residence of P. A. Chopin, it was decided to abandon the idea of holding a chrysanthemum show this Fall on account of the members showing a lack of interest in same and not growing chrysanthemums in pots, etc.; instead it is proposed to rent a store in the business portion of the city and have the members place on exhibition there the best of their products. Mr. Papworth generously offered the store of the Metairie Nursery Company, for a day and evening in case the society should see fit to use it.

C. W. Eichling, recently returned from the State fair at Jeanerette, stated that he was astonished at the magnificent specimen ferns grown and shown by the ladies of that parish; some of the plants were immense specimens and perfect in every way.

On motion the society unanimously endorsed the projected Panama Bi-Oceanic Exposition to be held in New Orleans in 1915, and it is intended that the society get in close touch with the prominent workers connected with the project.

President Eble said that New Orleans should obtain the next convention of the S. A. F. if possible, since the local society had become so much stronger in recent months; Chicago had promised its support.

Upon adjournment the members were invited to the dining room where Mr. and Mrs. Chopin had provided an elaborate spread; an enjoyable time was spent until midnight.

CRESCENT CITY.

Buffalo, N. Y.

News Items.

W. J. H. Palmer has been in New York and Philadelphia looking up stock for the Schoellkopf-Vom Berge wedding, which will have the biggest decoration Buffalo ever had.

W. J. Palmer & Son have been making extensive alterations in their large show store at Main and Genesee streets.

W. H. Grever has secured his new design patent on his pot cover called the "Ever Ready."

The large department stores had their Fall openings last week, which called for many thousands of gladioli and all the palms that could be got together in Buffalo. The work was divided between Palmer and Reichert.

It is about time the Florists' Club called a meeting. W. H. G.

SOUTH BOSTON, MASS.—On his return from a trip abroad Martin E. Tuohy, florist, and two other gentlemen, were tendered a reception and banquet by about 100 of their friends in South Boston, where Mr. Tuohy is very popular.

Chicago.
The Week's News.
Frank Ben, at his Fortieth avenue range, is preparing for an expansion next Spring by the erection of a large house, 250x50 feet, for the cultivation of Summer roses, Kaiserin Augusta Victoria preferred. This will make an important addition to his ten houses, which now embrace about 32,000 square feet of glass.
Charles Schultz has started out with two houses of single violets at 2795 Forty-ninth avenue, Mayfair, with every prospect of success. He is confining his product for the present to single sorts, California and Princess of Wales, but looks forward to the possibility of helping the local market out on doubles. His stock at present is in excellent shape.
James G. Hancock, well known to the trade as an efficient member of the Vaughan's Seed Store floor staff, has severed his connection with that house and has taken charge of the books and office of Frank Oechslein's Adams street establishment.
J. P. Kidwell has purchased two hundred and twenty-two acres at Belmont on the C. B. & Q. close to the station and is at present erecting five 200-foot houses and a commodious shed. The stack which is towering skyward is an indication that this is only the beginning; in fact, there is glass enough on the premises to largely increase the plans that are in sight. At the Wentworth avenue range Mr. Kidwell has one of the best lines of ferns in Chicago. The various forms of nephrolepis are cultivated to perfection and thousands upon thousands of small ferns, including the hardier varieties, may be seen in all stages from the seed box to 4-inch stock. Grandfather: P. J. Hauswirth says he

is delighted and yet not sufficiently elated to neglect the important fact that if you are not already a life member of the S. A. F., it is time that you should be. It is a hobby of his, and he would be pleased at any time to credit you with the contribution necessary to place you on the life list.
Edward Amerpohl, proprietor of the Janesville Floral Company of Janesville, Wis., was in the city last week and reports that the call for his favorite nephrolepis doesn't let up long enough to get a fair stock ahead.
D. J. Murphy of Manistee, Mich., spent a few days in the city last week.
L. J. Stuppy of the Stuppy Floral Company of St. Joseph, Mo., made his annual visit to Chicago last week.
L. W. Wheeler, formerly manager of Vaughan's Seed Store in New York, accompanied by Mrs. Wheeler, passed through Chicago last Friday on his way to Los Angeles, Cal. While in the city Mr. Wheeler was entertained at dinner by a party of his old associates.
Winter's Seed Store staff have been busily engaged for the past few days handling their invoice of Holland bulbs, which have arrived in good shape.
It is a treat to anyone interested to take a run through the Lincoln Park preparatory houses and see the excellent growth Superintendent Frey has on the orchids, particularly the cattleyas, which give promise of a wonderful inflorescence the coming season. The exhibition houses have been reglazed this Summer and the prospects for a successful exhibition were never better.
Among last week's visitors was C. E. Frank, Superintendent of the City Parks of Oklahoma City, who was making purchases for the parks.
Vaughan's Seed Store had an exhibition of gladioli in the window last week, including a fine vase of the new variety Mrs. Francis King.
W. S. Van Doren of Post Falls, Idaho, was a recent visitor.
Edgar Sanders' condition shows no improvement; he is now very low, and the only food he is able to take is given to him in liquid form.
WM. K. WOOD.

Rochester, N. Y.
News Notes.
The annual ceremony of blessing the graves indulged in by the Catholics of this city is an event worthy of notice from a floral viewpoint, and last Sunday being the day set apart for this, thousands of people thronged their way to the several cemeteries to pay respect to their lost ones. It is an occasion when every Catholic family turns out, and as each grave is decorated with flowers, one can easily imagine the vast amount of cut material used for this purpose. Asters being about the only available flower in quantity, thousands and thousands were disposed of. Where quality was poor, quantity made up, and about every store doing any kind of business had hundreds for sale. Never before in the history of Rochester were so many asters seen offered for sale; hucksters hied from door to door, school children sold the flowers from their gardens, even newsboys temporarily departed from their usual vocation, to sell them at "fi" cents er bunch. One grower cut and wholesaled 55,000 alone, and seemingly every farmer came into market with some variety of flower for sale. Dahlias, gladioli, etc., received their share of patronage, while roses and carnations were a back number except for ordinary business.
Prices of asters, 5 cents per bunch; of other stock, according to quality, carnations, \$1 per 100; roses, \$2.50 to \$5, much of which is small and hard to dispose of even at low figure.
Autumn weather prevails here, and frosts are anticipated shortly, so that growers are hustling to get perishable stock inside.
COCKNEY.

NORWICH, CONN.—Edward Weiss, the florist, of Cedar street, arrived at his 36th birthday on Monday, September 16, 1907, and in honor of the occasion entertained his fellow members of the Gesangverein Froehlichkeit at their rooms on Water street. The hospitality of Mr. Weiss was thoroughly enjoyed by his friends, who extended wishes for many more of the anniversaries. Mr. Weiss is a native of Germany and has lived in this country nearly three years.

New York.

News of the Week.

The annual dahlia, fruit and vegetable show of the American Institute was held this week at the Berkeley Lyceum building, West Forty-fourth street. A good exhibition of dahlias was staged, and the classes for fruits and vegetables were also fairly well filled. Among the exhibitors were F. R. Pierson Company, Tarrytown, N. Y.; John Lewis Childs, Floral Park, N. Y.; Scott Brothers, Elmford, N. Y.; J. T. Lovett, Little Silver, N. J.; L. M. Noe, Madison, N. J.; and H. F. Burt, Taunton, Mass. Ellwanger & Barry of Rochester, N. Y., made an extensive showing of fruit.

Patrick O'Mara would esteem it a great favor if any reader who has a spare copy of the pamphlet on Luther Burbank, written by Mr. O'Mara some time ago, would forward the same to his address, care of Peter Henderson & Company, 35 Cortlandt street, New York.

In the violet growing district of Rhinebeck and Red Hook there are about twelve new growers who will be cutting this season for the first time. The violet crop in general is well up to its usual average, and shipments are already being made daily to both New York and Chicago as well as other smaller cities. It is thought by many that the violets received in New York on the afternoon train—and probably 90 per cent. of the crop that reaches this city comes on that train—are flowers that have been picked that morning, but we are informed that this is not so. Every flower that reaches New York in the afternoon has been picked the day before, as there would not be time to gather them in the morning and ship them in time to reach New York on the same day. The question arises in many minds whether it would not be better to ship the flowers at night, and have them reach the market early the next morning, the same as is done with roses, carnations and other flowers. It would certainly be much better for wholesalers who have a shipping trade to get their flowers early in the morning rather than late in the afternoon, provided, of course, that the pickings are made in the afternoon of each day, as we are informed. With the new men who have started in business and the many additions to the glass area of the growers already established in the district, it is evident that there is to be an unusually heavy crop of violets for the coming Winter. A feature noticed in the violet district is, that the commission men of New York are not making so many trips among the growers, nor are they so anxious as formerly, to secure all the shippers they can get hold of. Whatever the cause of this change of mind on the part of the commission men, it is a fact nevertheless. One grower remarked recently that the time was past when the commission man was looking anxiously for the violet grower, and that now the grower who wants to place his flowers to the best advantage must go to the city and hunt up the commission man.

On Wednesday, September 18, Harry O. May of Summit, N. J., was married to Miss Charlotte M. Jenkinson at the home of the bride's parents, 678 High street, Newark, N. J. The ceremony was performed under an arch of ferns and palms, finished with white roses. Mr. and Mrs. May left for Rangeley, Me., where they have taken a cottage for the month, and will there spend their honeymoon. After their return they will live at 41 Pine Grove avenue, Summit, N. J., in a house which has been built expressly for the newly married couple by Mr. May's father.

Hicks & Crawbuck, the florist supply dealers of Brooklyn, have secured the sole right to sell in this territory a flexible metal hose that would seem to be a good thing for florists' uses. The hose is guaranteed not to burst or break.

F. L. Moore, the well-known rose grower of Chatham, N. J., is placing a

hose pipe on the market called the "Sunnywoods brand." Mr. Moore has been using hose pipe for twenty years, but has never before found any brand equal to what he is now offering to the trade.

G. V. Nash, of the New York Botanical Garden, will give an illustrated lecture on "Water Lilies" before the members of the New York Florists' Club at the next meeting, which is to be held on October 14 in the rooms in the Murray Hill Lyceum, 160 East Thirty-fourth street.

Samuel Parsons, Jr., landscape architect for the park department of this city, has been appointed by Mayor McClellan acting park commissioner, in place of Moses Herrman, who has been appointed a city magistrate. The landscape architect's salary is \$4,000 per year; that of commissioner is \$5,000 per year. The former, however, is a life job, while the latter generally lasts as long as the mayor's term of office.

The Brooklyn (N. Y.) Eagle of Saturday last, accompanying an article on Business Men's Clubs on Long Island, printed a fine portrait of James Dean, who since 1900 has been president of the Freeport club, which, under his guidance, has made most gratifying progress.

The death of Samuel Sloan, which occurred on Sunday, September 22, 1907, at his home near Garrettsons, New York, removes an ardent patron of horticulture in this locality. Mr. Sloan was at one time president of the old New York Horticultural Society, and at the time of his death was a member of the Corporation of the New York Botanical Garden.

In the newly issued prospectus of the Brooklyn (N. Y.) Institute of Arts and Sciences, it is announced that C. W. Ward of Queens, N. Y., will, during the season, deliver an illustrated lecture on "Carnations," and John K. M. L. Farquhar of Boston one upon "The Flora of Japan," under the auspices of the botanical section of the Institute.

Joseph Fleischman, the well-known retailer of Broadway and Fifth avenue, has opened an immense bath house in the Bryant Park building, corner of Forty-second street and Sixth avenue. These baths are said to be the most extensive and luxurious that have been known in modern times. The daily press in describing the baths one day this week said that "Mr. Fleischman drew his inspiration largely from history. He conceived the idea that as the famous baths of Rome were the playgrounds of the nation, so the Fleischman baths should be the ideal resort of pleasure where the remedial features of bathing would be but an important incident."

The Stumpp & Walter Company, seedsmen of 50 Barclay street, New York, will have been ten years in business on Tuesday, October 1. This bustling firm has made progressive strides each year, until now it is occupying the whole of the building in which it is located. The concern has just completed very extensive alterations which include an entire new store front and new elevator, giving one of the nicest and most up-to-date stores in the city.

A. M. Rennie, manager of Vaughan's Seed Store, was taken suddenly ill at his home in Providence, R. I., on Sunday night last, and has been removed to the Rhode Island hospital for an immediate operation for gall stones and abscess of the bladder.

Paul and Henry Dailedouze, retired florists of Flatbush, N. Y., are home from a tour in Canada.

William J. Palmer of Buffalo, N. Y., was a visitor this week.

Philadelphia.

Trade Notes.

We notice more activity in the retail stores this week, and the windows are brightening up, more flowers being used for store decorations, etc.

The William Graham Co. had two good dinner decorations resulting from the international cricket match; the same firm had a large wedding decoration on Tuesday at the Aldine hotel.

J. J. Habermehl's Sons report an increased business at the Bellevue-Stratford hotel; dinner decorations are becoming more numerous.

H. Bayersdorfer & Company have their new catalogue out; it is now quite a large book and contains everything in the supply line, being full of new cuts of all up-to-date goods.

Baltimore.

The Vincent Train Wreck.

The combined dahlia show and harvest festival at the farms of Richard Vincent, Jr. & Sons Company, White Marsh, came very near being a harvest of death. The New York Washington express came suddenly upon the florists' train on the return trip. Six coaches of our train were occupied; every seat was taken and dozens of persons were standing in each coach. Our train arrived at Cowenton 28 minutes late. At Bay View Junction we were backed into a siding to give the right of way to the express; the passenger coaches had but half a minute to get into safety when the express, going at least 40 miles an hour, struck our engine, tender and baggage car, all of which were demolished by the frightful collision and thrown into a heap down a 20-foot embankment right in front of our eyes. I was seated in the front coach immediately behind the baggage car, with my wife. The great blow snapped the coupling and left our coaches standing in safety upon the track—a miraculously close shave. A heavy electrical and thunderstorm was raging at the time. The scene before us, combined with the elements, made an awe-inspiring spectacle, which was quite romantic and exciting in its many details.

After 1½ hours' delay the passengers of both trains were gathered up and brought to Baltimore, some of us drenched from the rain, but none the worse for our experience, and all thanked their Creator for their safe deliverance.

Some Hospitalities.

The Gardeners' Club and the bowlers, with their visiting friends and their ladies, however, carried out the program of the evening. A bowling match resulted in both Philadelphia and Washington downing the two teams put up against them by Baltimore.

The ladies of Washington and Baltimore, after supper, also bowled several games. About 60 men sat down to a little repast after the men's bowling match. The trophies won at the Philadelphia S. A. F. convention played a conspicuous part and Captain Moss fulfilled his promise by fulfilling the great Philadelphia cup, which, however, was so heavy that none could lift it up gracefully without getting an involuntary shampoo from its foamy contents, evoking much merriment at the expense of the would-be indulger. We were delighted to have our good friend, Commodore John Westcott, with us; he made one of his happy and characteristic speeches and he did not forget to urge a strong attendance at Niagara Falls at the next S. A. F. convention. I, H. Moss was toastmaster, and among others who spoke were George Cooke, C. L. Seybold, William Graham and P. Inghman. A number of visitors stayed over for a few days looking over the various parks and florists' establishments in and around Baltimore.

John Cook, Baltimore's pioneer rosarian, was surprised by a visit of seven or eight Philadelphians, who took occasion to congratulate him on his great new pink rose (yet unnamed). Mr. Cook claims it to be much better than Killarney. He has several houses of this new rose and it certainly looks fine. Mr. Lantenschlager, of Chicago, who was in the party, took a photograph of Mr. Cook with a bunch of his new roses.

Messrs. Vincent, Jr. & Sons Company are building six new houses of large size; 16 dwellings have recently been completed for the use of their employees. They have nearly five acres under glass. The size of their place is now 350 acres, 40 of which are in dahlias; these, however, will be better in one or two weeks, as a large number of varieties are not in bloom as yet. So far this year they have shipped, as per extract from their books: 2,269,123 plants of cabbage, 182,285 of celery, 111,000 egg plants, 266,875 pepper plants, and 2,363,831 tomato plants, with sweet potato, lettuce, etc., in proportion.

2 to 8 DUANE STREET, NEW YORK

Washington, D. C.

Visit to the Vincent Place at
White Marsh, Md.

About forty Washington florists, with their families and friends, left the Capitol city at 11 o'clock on the 17th for the trip to R. Vincent, Jr. & Sons Company's establishment at White Marsh, Md. The train was met by about 100 of the Baltimore florists and Mr. Vincent himself, who conducted the entire party to Cowenton, where farm wagons were waiting to convey them to the farms. Upon arrival a fine dinner was served under the auspices of two churches, by young ladies. After dinner small parties formed and viewed the place. The dahlias were divided into lots of from one-half to five acres, and some were not yet in bloom. The large potting sheds, in which the guests were received, were decorated with a magnificent display of dahlias and oak leaves tastefully arranged. Only the newer and more valuable sorts of dahlias are grown. In an interesting way Mr. Vincent explained to his guests, the various methods of cultivation employed in his 40 acre dahlia field. Six new houses, each 30x200 feet, are in course of erection and some six others of about the same size are filled with geraniums.

Upon completion of the inspection tour it was time for the train returning. This train was an hour late, and upon arrival at Cowenton a heavy rain and electrical storm came on. Near Baltimore the train was run into by the New York express, throwing the engine from the rails some 20 feet down an embankment; and had it not been for the timely breaking of a coupling pin the entire set of coaches would have gone down with their mass of human freight. This delayed all for two hours. Upon arrival in Baltimore, about 8 o'clock, some of the local club took the ladies to supper, while others took the men of Washington and Philadelphia to the

What Does This Mean To You?

holes for screws instead of four. The real significance of galvanizing a hinge is to prevent its rusting. But they will rust where the wear of the pin comes, if that pin is not made of brass—and H. & Co.'s hinges not only have six screw holes, but are also made with a brass pin. All this hinge talk just to show you that we go a step farther and find out exactly where the wear out, rust out place is and make it right. For the same reason we long ago discarded the short-lived, wooden eave plate and made one of steel with sash bar brackets attached. We not only sell material, but build our houses—and that is why we are in a position to know how greenhouses should be built. Write us.

HITCHINGS & COMPANY

GREENHOUSE DESIGNERS AND BUILDERS

Manufacturers of Heating and Ventilating Apparatus

1170 Broadway, New York

Monarch House Bowling Alleys, where in two games of ten pins Washington came out victorious. A fine supper was served by the Baltimore Club at the conclusion of which they brought forth the cup they had won at the S. A. F. bowling contest in Philadelphia, filled to the brim. The captain of the Baltimore team made a pleasant address of welcome, and the health and prosperity of all was drunk. The ladies of Washington vs. Baltimore also bowled two games, Washington being victor over the Monumental City. Mrs. Cooke, Mrs. McCauley, Mrs. Shaffer and Mrs. Simmons were among the victorious ladies from this city.

It was 1:30 a. m. when the party reached home, with no little gratitude for so narrowly escaping death, and the highest appreciation of the hospitality extended by the sons of Old Maryland.

A glut of dahlias has been upon the market during the past week; many of the country people sought sales about the various markets, and as an inducement offered large bunches of vari-colored flowers for any price obtainable, while some of the florist stands inside disposed of liberal bunches, somewhat tastefully arranged, for five cents each. Considering the season, Saturday was an unusually dull day; the excessive heat caused the flowers to droop badly, and kept many prospective purchasers indoors.

The chief topic of the week among the trade was the very narrow escape from death of the Washington and Baltimore florists on September 17 while returning from Vincent's dahlia farm. Among others who were in the wreck were Mr. and Mrs. William F. Gude and children, George C. Shaffer and wife, Mr. and Mrs. Simmons, Mr. and Mrs. McCauley, Mr. and Mrs. George Field, George Clarke and wife, George Cooke, wife and daughter, Harry Ley and wife, Chris. Shellhorn and wife, John Robertson, Messrs. Mayberry and Hoover, Theo. Deitrich, Peter Bisset, Mr. Berry, N. L. Hammer, Otto Bower, Edw. S. Schmid, Robert McClellan and Robert McLaughlan.

Peter Bisset has about completed three magnificent new greenhouses at Twin Oaks, the handsome estate of Mrs. Gardiner Hubbard, over which he presides. The houses were designed and built by Mr. Bisset, and form a fitting adjunct to the place, in addition to demonstrating his skill not only as a horticultural architect but as a skilled mechanic. The features of permanency immediately appeal to the visitor, and a wealth of useful information in the arrangement of many details may be gathered by the prospective builder. The houses are used for roses, carnations and palms, respectively, and under one of the cement floors is neatly arranged an up-to-date mushroom cellar.

Edgar B. Hodgman, formerly of the District of Columbia, has removed to Prince George County, Md., near Berwyn, where he has erected a modern carnation house which is filled with choice stock. On the outside he is growing hardy roses and peonies of the better class.

JAS. L. CARBERRY.

Twenty one years spent in running greenhouses will not make a rubber manufacturer out of a florist.

But twenty one years experience enables a florist to select a hose unexcelled for lightness, strength and wear as no manufacturer could.

These are what have been secured at the

Sunnywoods Greenhouses

both the experience and the hose.

Sunnywoods' hose is nice to handle, because it is both light and flexible. It is cheap, because of its great strength and proven durability.

It is seven ply, made of the best materials. For 500 lbs. pressure. Its size is 3/4 inch. In lengths of 30 and 50 feet: with couplings.

Price : Sixteen cents per foot.

Special Offer.—A trial lot at only fifteen cents per foot if cash accompanies your order.

The proof is in the using.

THE LOWEST PRICE

is not always seen in the total figures on an estimate—much depends on the material included in the bid. It is an actual fact that our material is made different and better than any other, for which reason our price is often more than the prices of some other firms. Even on the hinges ours are better, as they are made for six screws in place of four, and are a heavier pattern with better galvanizing. It's these small things all the way through that means a saving on repairs after a-while. Why not buy the best in the beginning? Write now for our 96-page catalogue.

Seed Trade Report.

AMERICAN SEED TRADE ASSOCIATION

George S. Green, Chicago, Ill., president; M. H. Duryea, New York, first vice-president; F. W. Bolgiano, Washington, D. C., second vice-president; C. E. Kendel, Cleveland, O., secretary and treasurer; Leonard H. Vaughan, Chicago, assistant secretary.

ROCHELLE, ILL.—The new seed store being erected by Frank Evans and J. E. Barber is almost completed.

Reports show that the Ohio onion crop this year is somewhat heavier than that of last year, and that the quality, as a general rule, is also better.

It is estimated that the sweet corn crop of Maine will be between 75 and 80 per cent. of the normal yield. This estimate depends considerably upon a continuance of favorable weather conditions during the next few days.

SEED AND ROSE CATALOGUES.—An American consulate in the West Indies writes to the Bureau of Manufactures, Washington, D. C., that it would be very glad to receive catalogues of vegetable and flower seeds and catalogues of American roses.

BEAN SHORTAGE IN VERMONT.—There is a shortage in the bean crop of northern Vermont, says the New England Farmer. Ordinarily, North Hero and South Hero Islands in Lake Champlain produce about 30,000 bushels of beans, practically all of which go to the Boston market. This is the season of pulling the plants, and the farmers have been enabled to estimate that they will have about 33 1-3 per cent. less than usual to dispose of.

CALIFORNIA BEANS.—Stockton, (Cal.) bean buyers agree that 6,000 acres are in beans in that county this season and that the yield will be over 150,000 bags. Last season there were 9,000 acres in beans in the county and the total yield was 138,000 bags. The average yield per acre throughout the country was about fifteen bags. Much of the island will yield from 35 to 40 bags to the acre this season.—Market Growers' Journal.

A Monster Mushroom.

We are sending you a photograph (herewith reproduced) of a large mushroom of the puff ball style, which has been brought to us by one of our market gardeners. It is an exceptionally large specimen, and may interest your many readers. It weighed 6½ pounds, and the largest mushrooms standing beside it are rather of a large commercial size, while the smaller ones are of good commercial size as sold on the market; the comparison shows the immense size of the large one.

R. VINCENT, Jr. & SONS CO., White Marsh, Md.

BELGIAN IMPROVEMENT OF THE POTATO PLANT.—Consul W. P. Atwell, of Ghent, advises that experiments of a very interesting nature have recently been made at the Belgian State Agricultural Institution, with a view to improve plants grown especially on farms. As a result of these experiments it has been found that the use of "manganic" manure has a very energetic stimulative action upon the potato plant, rendering its culture very profitable. Similar experiments made with the beet root tend to show that the effect of manganic salts when applied to this plant is quite different. It may therefore be said that the beet root plant would be considered as an exception to the rule.

CANADIAN CROP REPORT.—A recent bulletin issued by the Ontario Department of Agriculture says the pea crop this year has been remarkably free from the weevil, and notwithstanding the drouth, the yield will be large. Early beans will give a light crop, late planted, a fair one. Should favorable growing weather continue, and corn escape early Autumn frosts, there will be a good general yield. Opinions differ very much as to the prospects of roots, although correspondents were unanimous

WHOLESALE LIST

now ready, send for it. Glad to give special prices on nursery stock in large quantities.

The Elizabeth Nursery Co.

ELIZABETH, N. J.

Though it was almost midseason before they got underway, E. F. Winterson of the Winterson Seed Store expresses himself as well satisfied with the prospects after the first six months' experience of the new venture. W. K. W.

NEW YORK.—G. W. West, Shelly Bay, Bermuda, the well-known lily grower and exporter, was in the city last week. Mr. West speaks optimistically of the future of the Islands, horticulturally and agriculturally, especially when the proposed deepening of the waterway to St. George's has been accomplished, permitting of easy ingress and egress of steamers both day and night. There is, however, considerable

Mushroom of Puff Ball Type; weight 6½ Pounds.

Courtesy H. E. Fiske Seed Co., Boston, Mass.

as to the backwardness of their growth compared with the average season. Rain was greatly needed as correspondents wrote. Mangels were doing much better than turnips, and the prospects of yield are from fair to good. Turnips are said to be very small, and have suffered from the fly and grasshoppers; but it is believed that timely rains would bring the crop into good form. Sugar beets have done well where grown. Practically nothing is said about carrots, which appear to be falling off as a field crop.

CHICAGO.—Knud Gundestrup, who recently returned from Europe, has been slightly under the weather since his arrival in Chicago, but not sufficiently so but that he is able to attend to business. While abroad he had good success in his arrangements for his two foreign specialties—English mushroom spawn and Danish cauliflower seed—and his American crop of onion sets has turned out very satisfactorily, in fact, rather above the average.

At Vaughan's Seed Store the bulb season is flourishing, the assortment being now practically complete, an invoice of Japanese longiflorum having been received last week.

Seed corn is one of the most prominent features in the National Corn Exposition which opens in the Coliseum, Saturday, October 5. There are about 20,000 entries; the prizes aggregate \$70,000 and it is expected that there will be 200,000 interested visitors from the fourteen great corn growing States. President E. S. Conway of the Exposition said last week that it was an assured fact that this would be the greatest corn exposition ever held in the world.

opposition to this project by some of the steamship companies, which may take some time to remove. Mr. West says the Bermudians are now going in for strawberry culture, which has proven remunerative as a domestic product, and with more frequent steamer communication with the mainland, could be made a valuable export. Strawberries can be grown there five months in the year, he says. He mentioned a case where \$50 a bushel had been obtained for them in New York, when out of season here. The Canary Island banana is likewise being extensively cultivated, and is proving a profitable crop. The fruit is now largely shipped to England.

As regards the lily business, Mr. West says it is being rejuvenated, so to speak, and that in two or three years more, very little complaint of mixed bulbs from Bermuda will be heard. This will be brought about by the careful selection and use for stock of only the true Harrisii bulbs, all others being discarded; in fact some of the best growers, Mr. West among them, have already sacrificed a large portion of a year's harvest to bring about this condition, beginning all over again, as it were. Heretofore, also, all the best bulbs were shipped from the Islands, and the poorer grades retained for planting as stock, reversing the procedure in the matter of improvement by selection and tending to deterioration in every respect. This, as said, is now being changed and more common sense, up-to-date methods adopted. Mr. West speaks highly of the excellent service rendered by Mr. Harris of the Government experiment station in Bermuda, in regard to the improvement of the lily crop, and otherwise.

Healthy stock, true to type, would certainly be a great desideratum, and no doubt the trade will be glad to learn of the efforts of the Bermuda growers to secure these conditions.

Prices Advertised in these Columns are for THE TRADE ONLY—When Writing Please Mention THE FLORISTS' EXCHANGE.

Seed Trade Notes.

For many years the prices at which grass seeds and clovers have been supplied to consumers have caused very little comment by either buyer or seller, for the values of the standard grades have from season to season changed but little, comparatively speaking. But the present rates at which timothy (*Phleum pratense*), and medium red clover (*Trifolium pratense*), as well as red top (*Agrostis vulgaris*), and Kentucky blue grass (*Poa pratensis*), must be sold is the cause of much surprise and, in many cases, real arguments with customers. This applies in more or less degree to all grass seeds and clovers, as all varieties are in a steadily advancing market. I noticed last week that one of your contemporaries reported that Pres. George S. Green, of the American Seed Trade Association, says, that red clover seed was never so high in the history of the modern trade. Yes, it is a great many years since red clover sold at retail for twenty cents or more a pound, as it is now doing. In regard to timothy seed, I call to mind distinctly that in the early eighties it went to \$4 per bushel of forty-five pounds; and in connection with this high rate, I remember that several of the larger seedsmen of those days took occasion to unload large quantities which they had purchased two seasons previously as low as \$1 per bushel. Timothy is very different from clover seed, as regards not deteriorating by being kept over a season. Clover seeds lose their color badly, which materially reduces their value. It does most surely seem to be a year when high prices and a continually advancing market applies to everything in seeds.

This week reports from Aroostook County (Maine), confirm our fears for some time past in regard to the potato crop, the best judges in that section placing the yield as not likely to be over fifty per cent. of the average crop, and almost worse than that is the fact that many growers are complaining of blight and rot.

The first frosts of the season, the early part of last week, while very general all over the country were not very heavy and did little damage to the flower gardens, which owing to the late season and the especially good growing weather so late in the season, are in such excellent condition that until a hard and killing freeze spoils their beauty will prevent a very heavy over-the-counter trade for bulbs. The first heavy wholesale orders for Dutch bulbs have been mostly filled by the larger seedsmen, and this branch of the business will be a little quiet until active retail trade makes filling in orders by the dealers necessary. As regards the mail orders for bulbs the past week, an especially active business has been done, which just as soon as cold weather does come will turn into a rush.

There never has been a Summer and Autumn when seeds of the hardy perennial flowers have sold better than they have this season; especially does this apply to pansies, hollyhocks, larkspurs, Canterbury bells and a few other standards.

Speaking of flower seeds it now looks

as if sweet peas and pansies particularly would be considerably higher in price, as both these crops are showing shortages. Advices from the growers of nasturtiums have been so far quite conflicting, some claiming a radical shortage and others a full crop. Be this as it may, it would seem to be the part of wisdom to secure our needs in the line of all flower seeds the earlier the better.

Apropos of sweet peas, there is already being much interest shown in the "Burpee's New Spencer sweet peas," but as these were so fully described in these columns so recently (see page 359, issue of September 14, 1907). I will simply here call attention to them.

BLACK-EYED PEAS.—In the matter of the protest of the Wallerstein Produce Company against the assessment of duty by the collector of customs at the port of Richmond, Va., the following opinion has been handed down by Waite, General Appraiser:

"The importation in question in this case consists of 1,000 bags of 'black-eyed beans,' as described in the invoice. The testimony shows that the commodity is known as cowpeas or black-eyed peas. The importation was assessed for duty at 45 cents per bushel as beans under paragraph 240, tariff act of 1897. It is claimed by the importers to be dutiable at 30 cents per bushel as 'pease dried, not specially provided for,' under paragraph 250. The paragraphs involved read as follows:

240. Beans, forty-five cents per bushel of sixty pounds.
250. Pease, green, in bulk or in barrels, sacks, or similar packages, and seed pease, forty cents per bushel of sixty pounds; pease, dried, not specially provided for, thirty cents per bushel; split pease, forty cents per bushel of sixty pounds; pease in cartons, papers, or other small packages, one cent per pound.

"A portion of the importation was submitted to the Secretary of Agriculture for identification, and in his report he describes the article in the following language:

"These seeds are cowpeas, *Vigna unguiculata*, and consist of two varieties, the so-called black eye and the so-called brown eye. Botanically speaking cowpeas are neither true beans nor true peas, though most closely relating to the former.

"He further says:
"The use of cowpeas as a crop is, however, totally different from that of either the true beans or the true peas. A very large proportion of the cowpea crop growing in this country is for use as hay, though a considerable part is plowed in under as green manure. * * * These two varieties, namely, the black eye and the brown eye, are used more or less as human food, though none of the other varieties of cowpeas are so employed.

"If the testimony with regard to this commodity ended here we should be inclined, upon inspection of the sample, to classify it as beans. It appears, however, from the record that it occupies a sort of intermediate position between the bean and the pea; and as we can not conclude that this particular commodity is well known by the common and universally accepted name of bean or pea, we think it is a case where, for duty purposes, we should rely upon commercial designation, if there is one. The testimony of three witnesses on the behalf of the importers is found in the record. They are men of integrity and good standing, apparently, and have had long experience

in handling peas and beans—one of them at least both here and in the South, where, we learn, the commodity in question is extensively grown. We think the testimony clearly shows that they are known—and were at the time of the passage of the act—in the trade and commerce of this country as peas, either cowpeas or black-eyed peas. We do not think the evidence would warrant us in finding that they are seed peas, as there appears to be just as much proof that they are for table consumption as that they are imported for seed purposes.

"The protest is therefore sustained and the collector's decision reversed."

European Notes.

"Having been so busy during these fine sunny days I could not find time to answer your kind letter." The foregoing extract of a letter from one of the most highly respected seed merchants in Germany fitly expresses the position of affairs all over Europe at the present time. A full 15 days of bright sunshine has helped things forward in splendid style. Our crops of peas come tumbling in in the best possible condition, and while, owing to blight and vermin, there is a considerable percentage of pickings, things are nothing like so bad as we feared.

Owing to the enhanced values of all kinds of grain and feeding stuffs, even the of all our peas becomes a valuable asset, so we feel easier all round.

The early varieties of radish, which became badly blighted at the beginning of the month, are all out and safely stacked, and while the crop will not be very heavy, the quality will be good. The stems of the later varieties are now too hard and woody for the aphids to affect them, and should present conditions continue for another week the crop will be safe and reasonably abundant.

Sweet peas in cool and moist situations are bursting into bloom once more. Of course, no one expects these flowers to produce any seed, but many pods that we did not expect to harvest are filling out in good style and are now practically safe.

The one crop that puzzles us is parsley. It is reported that Lord Chesterfield apologized to his friends for being "such an unconscionable long time in dying." We wish the same spirit to enter into our parsley plants, for although they have been dying this month past they are not yet ready for the sickle, and we want the seed.

Samples of new crop alfalfa just to hand from Provence are fairly bright; prices, as compared with last year, are in buyers' favor. EUROPEAN SEEDS.

Vegetable Novelties for 1908.

These might be more numerous, but they can hardly be more select. Up to the present none of the leading houses has shown its hand; we can therefore conclude that they have very little up their sleeve.

Taking peas as a most important line you have already referred to the Laxtonian, which Laxton Brothers will offer to the trade through the wholesale houses. It is a very fine variety, and is sure to make its way.

Barr & Sons will offer through the

same channels a variety named Mars, which bears a strong resemblance to Sutton's Peerless Marrow in every respect except color. This is also worthy of a place in every catalogue that caters to a high class trade.

Cooper, Taber & Company will offer a wonderfully early round blue, which, true to the racing instincts of a house in which J. G. Waite was a moving spirit, has been named Velocity, in honor of the winner of the Doncaster cup. It is 14 days and 5 minutes ahead of anything at present on the market, and is highly commended (after test) by some of the best judges on your side.

Both Sutton and Carter will doubtless in due season offer us something that will prevent our being "quite content" with what we already possess.

Beet Witham Fireball should command a ready sale on your side. It is as early as the earliest Egyptian and in addition it is fit to eat at a time when the Egyptian would be as hard as a Connecticut nutmeg. The color is a fiery red, very vivid and pleasing.

The rage for radishes with a large white tip (à gros bout blanc), particularly in France, has led to the development of this characteristic in the French breakfast, and pale rose turnip with white tip, and now in Cooper's Sparkler we have the same character fixed in the brilliant scarlet forcing turnip-shaped variety.

Mett's Triumph spinach has proved itself in very severe tests to be the most reliable "all the year round" variety now in commerce. It should quickly displace the old prickly seeded variety for Winter use.

Of new tomatoes there appears to be no end, but for extra early and main crop work Cooper's First and Lawrenson's No. 3 are hard to beat.

New frame cucumbers and melons will hardly interest your readers. The supply, like Tennyson's brook, "goes on forever."

Of beans, both pole and broad, we have sorts enough, but the cry is "still they come." It is a pity that our good friends in the land of the free are lacking in appreciation of their many good qualities.

As a revival is manifested in the potato industry we shall soon be inundated with a flood of novelties of more or less value.

TWO NEW "SPENCERS" FOR 1908

BURPEE'S WHITE

BURPEE'S PRIMROSE

New Sweet Pea

Burpee's White Spencer and Burpee's Primrose Spencer should be included in every "up-to-date" catalogue of Sweet Peas.

A Spray of
Burpee's White Spencer
Exactly Natural Size
Electrotypes of this and the
other blocks will be furnished for
catalogue use.

An Expert Opinion

While in England during July the writer received a letter from Mr. Lester L. Morse, the well-known grower and sweet pea specialist, of California, in which he spoke most enthusiastically of these two New Spencers. Mr. Morse had kindly traveled several hundred miles with our Mr. Earl to see the crops which were being grown for us in San Luis Obispo County, California, by Rev. L. C. Routzahn, on whose grounds both varieties had originated.

When preparing this circular it occurred to us that it would be well to give the opinion of such a recognized expert as Mr. Morse, who had no financial interest whatever in either variety. Instead of asking, therefore, merely for permission to quote from his personal letter we wired that we were now preparing circular for the English trade and would like him to telegraph us his impartial opinion of the Two New Spencers. His telegram reads as follows:

San Francisco, California, August 26, 1907.

W. ATLEE BURPEE & CO., Philadelphia:—

As seen Routzahn's both unquestionably finest of their class. Immense size, wavy; long stems; fragrant. White especially excels all other whites. LESTER L. MORSE.

Burpee's White Spencer

BURPEE'S WHITE SPENCER produces in the greatest profusion flowers of enormous size that are *absolutely pure white*. It is white-seeded and comes true to the Countess Spencer type. The standard is *decidedly waved*, crinkled and fluted! the wavy wings are so folded, that the keel is almost hidden. The standard measures from one and three-quarters to two inches across by one and three-eighths to one and five-eighths inches in depth. The wings are fully an inch wide and nearly as deep as the standard. The flowers are borne three and four to the stem and are uniformly well placed. The stems are extra strong and measure from twelve to fifteen inches in length.

The vines are most vigorous in growth, with heavy foliage, and attain a height of from ten to twelve feet. They are nearly covered with bloom, while the flowers retain their enormous size throughout the season. Of fine substance the magnificent flowers are unsurpassed for cutting and for keeping after being cut.

In sealed packets containing ten seeds each: Per pkt. 15 cts.; 2 pkts. for 25 cts.; \$1.00 per doz. pkts.; \$7.00 per 100 pkts.

In sealed packets containing 25 seeds each: Per pkt. 25 cts.; 5 pkts. for \$1.00; \$2.00 per doz. pkts.; \$13.75 per 100 pkts.

New Sweet Pea

Burpee's Primrose Spencer

This is a fitting companion to *Burpee's White Spencer*. The vine is equally as thrifty and free flowering, but slightly shorter in growth, attaining a height of eight to nine feet. The flowers are well placed on strong, thick stems, ten to twelve inches long, and are borne never less than three flowers, and sometimes four flowers, to the stem. The standard measures one and three-quarters inches to nearly (if not quite) two inches across by about one and one-quarter inches deep; the wings are an inch across by one and one-eighth inches deep. The texture is fully as substantial as in *Burpee's White Spencer*.

The color is a *pronounced primrose* or creamy-yellow throughout both standard and wings. It is equal in depth and richness of color to *The Hon. Mrs. E. Kenyon*, which, of course, it outranks in form and size. Both standard and wings are thoroughly crinkled or "waved." **Burpee's Primrose Spencer** will hold its own with any of the so-called "Yellow" Sweet Peas in color, while it *surpasses all others of this color* in size of flower, length of stem and vigor of growth. A decided acquisition to the Spencer type and the first of its color to be introduced.

In sealed packets containing ten seeds each: Per pkt. 15 cts.; 2 pkts. 25 cts., \$1.00 per doz. pkts.; \$7.00 per 100 pkts.

In sealed packets containing 25 seeds each: Per pkt. 25 cts.; 5 pkts. for \$1.00; \$2.00 per doz. pkts.; \$13.75 per 100 pkts. In lots of 500 packets.

Planting Tulip Poplars.

It may do very well to plant the tulip tree, *liriodendron*, in the South in the Autumn, but it assuredly will not answer to set it out at that season in the North. There is something in the cold ground and dry, cold air of Winter that is death to the tree. This is well known to most nurserymen and to those who have had to do with the planting of this tree, but there are many who do not know it, for nurserymen say many in order for the *liriodendron* comes to them for Fall delivery. Even when planted in Spring these trees are known to require care in handling, planting and pruning. In fact, the lack of success in transplanting large trees of it has led one big nursery concern to make a practice of cutting back to the ground all good sized tulip poplars when transplanted, and then the loss of trees is small. A shoot of more or less length follows, and in time a better tree results than when even had the tree lived, with no cutting back.

The fact that trees cut back almost to the ground will sprout from the base almost invariably has led to the belief that it is not perhaps so much the cold soil as the cold dry air above ground that is responsible for the ill-doing of Fall planted tulip trees. At any rate, be the cause what it may, the facts remain that this tree cannot be too severely pruned when transplanted, and that Spring only is the time to do the planting.

Bag Worms.

At this season of the year the destruction caused by the bag worm is often noticeable among collections of trees, particularly those of a coniferous nature. The bag worm is oftener found on *Arbor vitæ* than on any other tree, having a preference for the foliage of this evergreen. If attacked in force, as it often is, the tree will be killed, as the worm consumes every bit of live foliage upon it, feeding on it from branch to branch until not a living piece is left. This worm carries its home around with it, a cocoon-looking bag, from the top of which the upper part of its body emerges to feed on the leaves of the tree it is attached to. Deciduous trees are attacked as well as evergreens, but of all kinds it prefers the *Arbor vitæ*. Whole hedges of this tree will often be destroyed before the owner of them knows what is doing the damage, for if unacquainted with the pest a general observation of it often fails to reveal what it is doing. When the trees attacked by it is because of the total loss of foliage; all trees are injured by such a loss, but evergreen ones especially so, for they will not make fresh foliage as readily as deciduous ones would under like conditions. *Vines* are often attacked as are *Arbor vitæ*, but only as a second choice.

Spraying bushes containing the bag worms will kill the pests, using some of the arsenical compounds; but where bushes are of medium size only and easily reached, it is better to hand-pick the "cocoon." These should be gathered and burned in any case, as the eggs or the ensuing crop of insects are laid in them, and will hatch out in the following Spring.

Sowing Seeds in Autumn.

The growing interest in trees and shrubs and in trees for forestry purposes evidenced on every hand should lead to an increased demand for seedlings of all kinds, great as is the call for them to-day. A few years ago, when the prosperity of the country called for large numbers of trees and shrubs, quite a few nurserymen thought it but a transient affair and failed to set out more than their usual supply of seedlings. Those who thought differently and planted acres of small stock are the ones who are making money to-day. Much the same conditions exist at the present time as in the years spoken of, and those who are wise will continue to plant large numbers of all sorts of desirable stock.

Seeds of many kinds of trees and shrubs are ripening now, and October brings the time for saving them. Many defer the operation until Spring, and it is true many sorts do very well sown then. On the other hand, Nature sows such seeds in Autumn, and there are many reasons why the nurseryman would do well

to follow her example. Coniferous seeds do very well in Spring when kept in a dry state, but many deciduous trees must have their seeds kept in a moist state if to be remain unsown over Winter.

What seeds require to grow well is moisture, shade and warmth. After sowing it is therefore proper to shade the ground in some way. Placing a covering of forest leaves over it is best, the leaves kept in position by lath sash or its equivalent placed over them. This will make all secure until Spring. The leaves both shade the ground and promote moisture; then when the heat is furnished in Spring, growth starts.

When seeds have to be purchased they are sometimes a long time in reaching the purchaser's hand, sometimes too late to be got into the ground before it freezes. When seeds are expected, prepare the ground for them, and have a heap of light, sandy soil under cover for spreading over the seeds, then sow them even if the ground is frozen.

Popularity of Small Fruit Trees.

Nurserymen have noticed of late more demand for dwarf fruit trees than usual, mostly coming from the vicinity of large cities. Dwellings are being erected in the suburbs of all the cities in the country, dwellings to which small gardens are attached, gardens not fitted to contain large growing, standard trees, but large enough to admit of growing dwarf apples, dwarf pears, peaches and plums. Many years ago such fruit trees were common in gardens, but as orchards of standard trees grew up and came into bearing, fruit became so

When in exposed places, even about Philadelphia, hard Wintes will hurt it, but they do not when it is planted along the sea coast. The plant delights in the sandy soil and the damp air, and that the air is salty evidently makes no difference to it; in fact, it helps it, no doubt. Whether as a single specimen or as a hedge there is not another evergreen that could take its place. The moist air in Winter is what makes it thrive, regardless of a low temperature. It is well understood that it is the dryness of the air inland that destroys so many trees. Along the coast, no matter how low the mercury is, the air is moist, and thus injury is prevented. Further than this, there is the light, sandy soil of the coast to consider; it does not force a rank growth that does not ripen up early, but a short one, which ripens well long before the severity of Winter is felt.

No doubt, *Euonymus Sieboldianus*, the newer one, would thrive well along the coast and there prove a true evergreen. It is evergreen here in mild Wintes, and when in sheltered spots; and florists would hardly go astray in recommending it for planting there. The foliage of this one is a handsome green, but it is not of the thick, shining nature of that of *E. japonicus*. It is hardier inland than the last named, but, as said, it sheds its leaves when Wintes are severe—something it would not do along the coast, without doubt.

Ilex Cornuta.

To call the *Ilex cornuta*, Japanese holly, as some do, does not make clear what it is, as another species, *I. crenata*, is now in collections under this name, and

I. cornuta is from North China. But having in mind hollies as they are commonly known, the one of our illustration, *I. cornuta*, is much more worthy of the name than is *I. crenata*, for it has the true holly foliage, such as is seen on *I. opaca* and *I. aquifolium*. The beautiful one of our picture is growing on the grounds of O. E. Warren, Greenville, N. C. This tree is about 20 years old; and Mr. Warren gives its height as 18 feet, and a width of the same dimensions. The sprig with berries which Mr. Warren kindly sent us bears out all he says of its great beauty. He states "its leaves are extremely large, very dark green, berries extremely large and in full clusters of shining red. Without doubt it is the most gorgeous lawn or specimen tree I ever saw. The shape you see it in is its natural one. It has had no pruning." Mr. Warren goes on to say that efforts to raise it from cuttings are almost a failure, not more than one in five hundred rooting.

This is a holly unfortunately not sufficiently hardy for general cultivation in the North. It has stood the Wintes of Philadelphia when in sheltered places and when on elevated ground, where its growth became well ripened by the time Winter came.

Some botanical authorities still mention hollies as being dioecious, and while some are, it is not the case

with all. The one of our notes stands entirely alone, and is loaded with berries; and in the writer's own grounds is an English holly entirely removed from any other holly and it produces berries. Hollies are of all kinds, some perfect, some pistillate and others staminate.

We congratulate Mr. Warren on having a perfect flowering one, for *Ilex cornuta* is so scarce we do not know where another plant could be had without importing it. It is such a beautiful species that it would grace any collection when the situation was south of Baltimore.

As Mr. Warren mentions a difficulty in propagating it, let him try the seeds. Gather them in Winter when fully ripe, mix them with soil in a box for the Winter. When Spring comes wash the seeds clean of pulp and sow them. Even after this they will lie a full season before germinating. Because of this some nurserymen hold them in the box of soil until the Autumn, sowing them then.

JOSEPH MEEHAN.

PIERRE, S. D.—The provision of the nursery law of last Winter requiring a bond on the part of dealers is to be attacked in the federal court, and preparatory to such action an opinion was asked of Attorney General Clark as to his holding under the law, in which he has announced his belief that the provision would stand a constitutional test and is valid.

TROY, O.—The Peters Nursery Company, has gone into the hands of a receiver. Capital, \$200,000. They cannot raise enough to continue. Debts have accumulated to the amount of \$160,000.

Ilex Cornuta

On Grounds of Othen E. Warren, Greenville, N. C.

common and cheap that the growing of the dwarfs became less practiced.

Evidently the time has come for the bringing back to favor the dwarf fruit trees. Fruits are not to be had as they were a few years ago, nor will they be for some time to come, and mainly because of the ravages of the San José scale. Many orchards disappeared before their owners knew what caused the damage to them, and even to-day the fact that the trees must have annual sprayings is not nearly as well appreciated as it should be, which will make fruit scarce for years to come, until a knowledge of how to treat trees is a part of every fruit grower's education.

The presence of scale is another good reason for the planting of dwarf fruit trees, so that when spraying is done the fluid may reach the topmost limbs of a tree. The dwarf tree can be reached by the spray, every branch getting its portion—something that does not happen now, for time and again are to be seen tall trees that have been sprayed and yet are full of scale at the top, while the lower branches are free of it.

If those having the sale of fruit trees would make their customers understand how much easier scale is controlled on dwarf trees it would be to the mutual benefit of all concerned.

Euonymus Japonicus for Seashore Planting.

The florist who visits the shore of the New Jersey coast must be impressed with the utility of the *Euonymus japonicus* for planting there, for met with anywhere near the water it is always in a thriving condition; and how cheering is its bright green foliage!

Grand New Double Daisy

A SPORT from that great money making single variety, **Queen Alexandra**, that everybody grows to a good profit. You can do better with this. The flowers are large, averaging three inches in diameter, and none of the flowers come single at any time of the year. It blooms freely either under glass or outdoors. Young stock, out of 2½ inch pots, ready for delivery January 1st, \$25.00 per 100. **ORDERS BOOKED NOW.**

The Florists' McKinley Fund.

We have received from H. M. Altick, Dayton, O., chairman of the S. A. F. O. H. committee on the McKinley Fund, a list of subscribers together with the amounts donated by each. The total number in the trade contributing to this fund was 231, and the amount subscribed, \$1,051.64. The sums donated ran from 50c. to \$64.30 by individuals. The American Carnation Society giving \$100.
Mr. Altick, in his report makes the following comment: "The committee has in possession a number of signed pledges, which, together with verbal promises, which have been broken and unfulfilled, would have increased the total amount by at least \$250."
The subjoined letter received by Mr. Altick from the assistant secretary of the McKinley Memorial Association, Canton, O., is self-explanatory:
August 10, 1907.
Dear Mr. Altick: Your letter and very clear statement of your business for this Association was received some time since and the money turned into

the treasury. While the net results of this enterprise are not what either of us expected on the start, they have supplied a handsome contribution to the monument, for which the Society of Florists will have due credit, and I shall make it a special item in my report to the trustees at their next meeting, explaining the generous and energetic manner in which you have handled the matter. Aside from the benefit to the Association I wish to express my appreciation of the acquaintance it has afforded me with you and hope that we may meet frequently in the future.
This letter will be your receipt in full, covering the total of \$1,051.64 received by you and properly accounted in yours of the 29th ult. Very truly yours,
(Signed) FREDERICK S. HARTZELL,
Assistant Secretary.

The list of contributors will appear in a future issue.

Boston.

News Notes.

The Gardeners and Florists' Club will hold its October meeting on Tuesday, the 15th. The attraction will be a talk on "Greenhouse Heating," by W. W. Castle. Colonel Castle is a fluent speaker and the members should not miss this meeting when they may learn much on this important subject, especially if they take any interest in the electric circulator.
Henry Collins has leased the Sibthorpe greenhouses at Wellesley for a term of years and will grow a general stock for retail trade. Mr. Collins is well known as an expert decorator, having had charge of the floral department of J. R. Whipple & Company at their various hotels and more recently he has been with Houghton & Clarke. His host of friends wish him much success in his new enterprise.
John Walsh & Son, Malden, had an extensive decoration at the Bunting-Nelson wedding last week. The Waban Conservatories supplied them with several thousand roses for the occasion.
J. D. Rough, of Galvin's Back Bay store, has gone on his vacation, and Charles Lynch is taking his place as buyer in the meantime.
On the 10th inst. Welch Brothers will have rounded out thirty years in the business. They have been one year in their new store where their trade has greatly increased and prospects look bright for the future.
Robert Dunn, recently with the Waban Rose Conservatories, is now with the J. A. Budlong & Sons Company, having charge of a section of that firm's establishment.
W. N. Craig, Wilfred Wheeler and Duncan Finlayson will all act as judges at the horticultural end of the Brockton Agricultural Fair this week, the first named on flowers and the latter two on vegetables.
Chrysanthemums made their appearance the past week. W. C. Ward of Milton is sending in some fine October Frost and W. W. Edgar is on hand with good blooms of Marquis de Montmort and Lady Fitzwygram.

The Waban Rose Conservatories are

having a fine cut of American Beauty at present.

W. E. Bowditch, for many years in the florist business which is now carried on by his son at Grove Hall, Roxbury, has been visiting this city from his home in California.

Frank Hafferman is now with the Boston Cut Flower Company on Bromfield street.

Welch Brothers are receiving exceptionally fine grades of American Beauty roses and lily of the valley from Carl Jurgens, Newport, R. I.

Jas. D. Rough, of Galvin's Back Bay store was married Tuesday, October 1, the bride being Miss Emma McDonald of East Milton. The young couple have the best wishes of a host of friends.

James Tullis, of South Sudbury, is enlarging his plant by the addition of another big carnation house.

F. J. Dolansky, of Lynn, was agreeably surprised on his return from Europe by being presented with a gold watch and chain from members of the Odd Fellows lodge to which he belongs.

The sympathies of the trade are extended to W. J. Thurston, the genial manager of the Park street market, in the loss of his brother, who died suddenly on Thursday.

Edward Hatch, the genial treasurer of the Gardeners and Florists' Club, has added a new line to his business by connecting himself with the Exchange Trust Company, a new banking house on State street.

The league bowling teams are talking of organizing again for the season.

The Globe on Tuesday gave a brief description of the dahlia farm of Mrs. L. M. Towle, of Woburn. Mrs. Towle is one of the best growers of these flowers in this locality, having taken many prizes at the shows of the Massachusetts Horticultural Society; this year she won first for the largest and best collection.

John J. Fee, of Jamaica Plain, has finished rebuilding one of his houses; he is busy getting in his many thousands of bulbs, of which he makes a specialty.
J. W. DUNCAN.

St. Louis, Mo.

News Notes.

Charles J. Ford of Philadelphia, who represents A. Hermann of New York and others, is in the city making the rounds of the trade with holiday novelties.

Robert F. Tesson, formerly in the florist business here and well known in the trade throughout the country, will be married some time this month to Miss Hattie Wilkerson. Mr. Tesson is a life member of the S. A. F. and of the local Horticultural Society, who are with me in extending congratulations.

Much sympathy was expressed in the trade here when the announcement came in a telegram to Carew Sanders that his cousin, Edgar Sanders of Chicago had died there on Sunday. Mr. Sanders was well known to all the florists in St. Louis. Mr. Carew Sanders' son, C. C. Sanders, left here Monday night for Chicago to attend the funeral.

Mrs. M. S. Vesey of Fort Wayne, Ind., arrived in town on Monday to spend carnival week, and will be the guest of Mr. and Mrs. Meinhardt and sisters.

C. A. Kuehn and J. J. Beneke are again members of the Desoto bowling club this season. In a match game last Tuesday, Kuehn made an average of 209 in three games. Beneke is captain of the team.

President William Young hopes that the regular monthly meetings of the Florists' Club will be largely attended so as to encourage the new officers. The next meeting takes place Tuesday afternoon at 2 o'clock in the Burlington building. Matters of great importance are to come up.

ST. PATRICK.

THE CHRYSANTHEMUM

Arthur Herrington's New Book

The most complete and comprehensive work on the cultivation of the Chrysanthemum that has as yet been published in America. Handsomely illustrated, 168 pages, 5 x 7 inches. Price only 50 cents, postpaid.

SEND YOUR ORDER FOR A COPY NOW.

A. T. De La Mare Ptg. & Pub. Co., Ltd.

Plant for Name.—Please give name and habit of the enclosed plant?

New York. H. B.

—The plant sent for name is one of the montbretias. These plants are cultivated about the same as gladiolus are; i. e., plant outdoors in Spring when they will flower during August and September, lifting the bulbs before severe frosts arrive.

Heating.—If C. C. A., Suffield, Conn., will send his full name, not necessarily for publication, but as an evidence of good faith, and to conform to the rules of this publication with respect to all communications, his inquiry will receive immediate attention.

(42) **Paper White Narcissus.**—I have Paper White narcissus in the ground; the rain made them all come out. Can I hold them back until after the chrysanthemums, or would it be better to hold them back until after New Year? L. Y.

—Put the Paper White narcissus in cold frames, and when freezing weather arrives just afford them enough protection so that frost will not reach them. By thus keeping them in a good light and free from frost, they can be held back until the chrysanthemum crop is over without any injury to them.

(43) **Treatment for Streptosolen.**—Please inform me how to treat and cultivate streptosolen to reach the best flowering result. R. P. P. Mass.

—Streptosolen (syn., Browallia Jameconi) can be grown very well from seed treated as a greenhouse plant. Give a temperature of from 50 to 54 degrees at night, with a corresponding raise during the day, using a soil similar to what is given roses and not allowing the plants to become pot-bound in the earlier stages of their growth.

(44) **Snapdragon.**—We have snapdragon in 2½-inch pots, transplanted into same two weeks ago. We also have some old plants in the field from which we have been cutting all season. Which would you advise—to plant into the greenhouse for winter cutting; also when will they bloom? SUBSCRIBER. New York.

—We would advise planting the antirrhinums from the 2½-inch pots, as they can be relied upon to give a far better crop of blooms during the winter than the old plants that have already flowered.

(45) **Difficulty with Chrysanthemums.**—I send you a sample of my chrysanthemums (Dr. Enguehard). Kindly let me know what the disease is, also the cause, and whether I could prevent it or not. The top and the bottom leaves seem healthy, also the roots. Penn. W. B. H.

—The chrysanthemum leaves sent for examination do not show any signs of disease other than that some of the leaves have begun to turn yellow from local causes, probably being cracked with too heavy a stream of water going against them, or from being too much crowded together. Pick off the yellow leaves as they appear, and no serious damage will result from their loss.

(46) **Mealy Bug on Gardenias.**—Kindly inform me what is the most effective remedy for mealy bug on gardenia plants? I. R. B. New Jersey.

—To keep gardenias free from mealy bug is a matter to which every grower of these plants has to pay a great deal of attention, and if one has a good force of water at command, the bug can be kept down quite well if the plants are sprayed regularly, the force of the water, when heavy enough, usually being sufficient to keep the insect from settling and multiplying. Remedies for this pest are several, and if but a small number of plants are grown so that no great quantity of any insecticide is needed, there is nothing to equal Fir Tree Oil. This, used according to the directions given with the liquid, is a sure remedy, but its cost prevents it being used in

Dreer's Superb Strain of FRINGED Double Petunias

I have had the greatest success this season with my double hybrid Petunia stock, so I have an immense stock of over 40 fine new varieties in solid colors and variegated in every style.

Opp. Schenck Av.,

large quantities. Tobacco Extract is another good remedy; diluted properly and sprayed regularly, it will keep the insects in check, but the spraying has to be done repeatedly and not neglected in any way. Another good remedy is an emulsion made with whale oil soap, kerosine oil and water. To make this, use four ounces of soap to one gallon of water and boil until the soap is thoroughly dissolved. Then add a wine-glassful of kerosine oil and boil again until the oil is thoroughly mixed, and use after it becomes cold. This is probably the cheapest remedy and is as effectual as any where large quantities have to be used and economy considered.

FACTS

If you wish to be cock of the walk,
If you'd like to hear the town talk
Of the plants that you sell;

Why you know very well,

If they're Aschmann's, no buyer
will balk.

I always act as quick as I think, and have been successful; learn and do likewise.

ARAUCARIAS OUR SPECIALTY WATCH US GROW

1907 is our 12th anniversary in a successful career in the importation, growing and shipping of this well-known and so much admired evergreen, decorative plant, *Araucaria Excelsa*, *Robusta*, *Compacta* and the *Excelsa Glauca*.

Our importation this Spring, 1907, has swollen up to the enormous number of 6,000; more are coming with the azaleas in September and October. The florists of every city from the Atlantic to the Pacific Ocean can talk of Aschmann's *Araucarias*.

Now is the time to buy. They will gain in their growth 100 per cent. in two or three months.

The next in rank is our *Nephrolepis Fene*, of which we only grow the best selling and well-known varieties, and of which we have a big lot: Boston, *Elegantissima*, *Whitmanii* and *Scottii*, three large houses full, in best selling sizes, all pot grown (not bench grown).

Our ferns are not forced or grown in shady houses, but grown exposed to the sun, ventilators are open day and night. Such treatment stiffens the fronds, and makes strong, stout plants, that can be shipped 6,000 miles safely without injury to the plants in transportation.

ARAUCARIA EXCELSA, 8 to 8½ in. pots, 10-12 to 14 in. high, 3 to 4 tiers, 2 years old, 50c. each. Larger sizes, 6½ to 6 in. pots, 2-3-4 years old, 3-4-5 tiers, 60c.-75c.-\$1.00 to \$1.25 each.

ARAUCARIA COMPACTA ROBUSTA, 6 in. pots, 2-3-4 years old, 10-12-16 to 18 inches high, 3 to 4 tiers, \$1.80-\$1.75 to \$2.00 each.

ARAUCARIA GLAUCA, 3-4-6 tiers, 2-3-4 years old, 10-12-16-18 to 20 in. high, 6 in. pots, \$1.00-\$1.25-\$1.50-\$1.75 to \$2.00 each.

LANTANIA BORHONICA, 25c. each.

KENTIA FORSTERIANA and **Belmoreana**, European stock, 6 in. pots, 26 to 30 in. high, five leaves, \$1.00 to \$1.25 each; 4 in. pots, 18 to 20 in. high, 35c. each.

Cash with order please.

GODFREY ASCHMANN
Importer, Wholesale Grower and Shipper of Pot Plants
1012 West Ontario St., Philadelphia, Pa.

FALL SPECIALTIES

We have large blocks of the following plants, valuable to every florist:

CANTERBURY BELLS. (*Campanula Media*)—Grand for Winter and Spring flowering in pots. Strong, field grown plants in Blue, Rose or White, \$5.00 per 100.

BOUGAINVILLEA GLABRA SANDERIANA. One of the grandest market plants, much in demand again. Compact, well trained specimens, sure to bloom. 4 inch pots, \$2.75 per doz., \$20.00 per 100. 5 inch pots, \$3.50 per doz.

CELESTIAL PEPPERS. 4 inch pot-plants full of young fruit. \$12.00 per 100.

ASPARAGUS SPRENGERI. Field-grown, bushy plants, ready for 5 inch pots, \$10.00 per 100.

DRACAENA INDIVISA. Field-grown, 4 inch pot size, \$10.00 per 100; 5 inch, \$15.00 per 100; 6 inch, \$25.00 per 100.

HYDRANGEA-OTAKSA and HORTENSIS. Strong, bushy, well-grown plants from field, the finest we ever grew; \$12.00 per 100. Lighter plants, 2-flower shoots, \$8.00 per 100.

PEONIES. Send for special Peony circular, if interested.

AZALEA INDICA. Best market varieties only. No assorted case lots. Let us know your wants.

Send for catalogue No. 5, describing full list of Florists' Bulbs, Seeds, Plants, Etc.

THE STORRS & HARRISON CO., Painesville, Ohio

Asparagus Sprengeri

Extra large bushy plants, 3 in. pots, 5c.

ASPARAGUS PLUMOSUS NANUS. Fine stock 2½ in. pots, 3½c. No better plants to be found.

FERNES. First class varieties, 2 in. \$3.00 per 100

R. G. HANFORD, Norwalk, Conn.

Vinca Variegata

Strong, field tips, well rooted, at \$1.00 per 100; \$9.00 per 1000.

VIOLET CLUMPS, *Princess of Wales*, at \$4.00 per 100.

DRACAENA INDIVISA, 4 in., \$10.00; 2½ in., \$2.50 per 100.

Cash with order.

C. F. MAHAN, R.D. No. 8, Dayton, O.

COCOS Weddelliana, 3 in. pots, 10-12-16 in. high, 15c.-18c. to 20c. each.

ARECA Lutescens, 4 in. pots made up, three plants in a pot, 20c. to 25c. per pot.

FICUS ELASTICA or RUBBER PLANTS, home grown and Belgium stock, 8-6½ to 6 in. pots, 35c.-40c.-50c. and 60c. each.

FERNES, Boston, 4 in. 20c., 5 in. 26c., 6 in. 50c. each.

Elegantissima, 4 in. 26c., 6 in. 50c., each.

Whitmanii, 6 in. single plants, strong, 50c., 75c., \$1.00 each; made up plants, 3 in a 6 in. pot, 75c. each, 7 in. as big as a bushel basket, made up 3 plants in a pot, \$1.25 to \$1.50 each.

Pieroni, 4 in. 20c. to 25c., 6 in. 50c. each.

Barrowsi, 8½ in. 40c. each.

Scottii, 4 in. 20c. to 25c., 6 in. 50c., 6 and 5½ in. 35c. and 40c., 7 in. very heavy \$1.00 each.

Ferne for Dishes. A large assortment in 2½ in. pots, \$4.00 per 100.

ADIANTUM Hybridum, the best adiantum for cut purposes, large plants in 6 in. pots, 60c. each.

ASPARAGUS plumosus nanus, 3 in. pots, \$5.00 to \$6.00 per 100; 4 in. \$10.00 per 100; all bushy plants.

CYCAS REVOLUTA (Sago Palm). Plants from 5 to 10 leaves 10c. per leaf, above 10 up to 35 leaves 80c. per leaf.

PRIMULA OBCONICA, in bud and bloom, best strain, 3 in. \$7.00 per 100; 4 in. \$10.00 per 100.

CHINESE PRIMROSES, 4 in. best Jno. F. Rupp strain, \$10.00 per 100.

All goods must travel at purchaser's risk. Please state if plants are to be shipped with or without the pots.

HYDRANGEA OTAKSA, pot grown, 6 in. to 7 in. 25c., 35c. to 60c. each.

AZALEA INDICA-DEUTSCHE FERLE, for Christmas forcing, large specimen plants, \$1.00, \$1.25, to \$1.50 each; other varieties for later forcing, only best kinds are imported, 76c., \$1.00, \$1.25, to \$1.50 each.

BEGONIA, Gloire de Lorraine, 6 in., 50c., 75c. and \$1.00 each.

Cash with order please.

THE WEEK'S WORK.

Peonies.

It invariably happens that all through the month of October growers have so many things to attend to indoors and out that any work that, in their opinion, can with safety at all be deferred until well on toward Winter is put off, and that is how the planting of peonies is sometimes left until frosty weather puts a sudden stop to the work. Peonies are now assuming such importance that their cultivation demands more close attention than it has heretofore received. During the first week in October peonies intended to be dug up for division should have operations started upon and the work continued without interruption until completed. The main consideration in the work of lifting peonies is for the purpose of their multiplication, so that great care be exercised in the actual work of digging the old plants so that none of the roots get injured or broken, and this can only be accomplished in a satisfactory manner when the workmen are made to understand the nature of the roots of the plants and the damage that would result from their mutilation. It is always the safer way in starting to dig up peonies to begin excavating well out and away from the roots, and then as the digging proceeds to work the soil from the roots carefully until the whole clump is in such a condition that it can be removed without injury to the fleshy roots. If the main object for the near future at least is the multiplication of the stock, in dividing only one eye need be left; but if good strong plants is the desired object—plants that will give a number of good flowers—it will pay not to divide the old plants into a great number of one-eyed pieces. If peonies are to be replanted in the same ground out of which they were lifted, and if there are several varieties in the plantation, it will be necessary to use caution in order that no part of the old roots remain in the soil, otherwise they will likely grow and cause confusion in time in the identification of varieties.

Although we often hear it said, and perhaps with some degree of truth, that peonies will thrive in divers soils and locations, it is nevertheless unqualifiedly true that peonies can only be grown to perfection in good rich, adhesive soil, and when they are to be grown on a large scale for commercial purposes it will, without the least doubt, pay to prepare the soil thoroughly for their reception. This preparation should consist of deep trenching and a liberal application of animal manure and a thorough incorporation thereof with the soil before the work of planting begins.

Peonies should not be planted closer to each other than three and a half feet, and for permanency four or even four and a half feet will be still better. It will be well in planting to place the crowns, or eyes, so that they will be covered to the depth of three or three and a half inches with soil when planting and filling in is finished. The surface of the soil all through the new plantation should be covered with a good coating of coarse manure which may with advantage be allowed to remain indefinitely or until something else of a like character takes its place.

Dahlias.

It has happened again this year that a great many dahlias sent out to customers were not what they were intended they should be; in other words, they were other varieties than those ordered. Now this is a serious matter to seller and buyer alike, and the injustice is so apparent that it needs no further reference, except so far as a repetition of the warning to be careful in labeling and in attaching the labels to the different varieties as they are dug-up goes. It may have been that the trouble arose when the work of propagation was underway in Spring, but even if it did so arise, it can with reasonable care be avoided with profit and pleasure to more than one party to the transaction.

Pansies.

It makes a great difference in Spring when pansies are offered for sale if they are weak, spindly things with blooms of like character or are sturdy, dwarf well-furnished plants, although with perhaps but a single blossom developed. The lat-

ter kind of plants will not only sell well on sight, but they will also stand shipping well if need be and give satisfaction to the planter. It makes not so much difference whether pansies are grown through the Winter planted in the soil in frames or grown in flats and the flats placed in frames; the essential requirements are that they be grown cool right along, with all the light and air possible, and that they be transplanted out of their seed quarters before they become weakly as a result of crowding. There is no doubt whatever that frames are the most satisfactory abiding places of pansies intended for sale in the Spring and early Summer, and that for two reasons: first, because in them the plants will be nearer the glass than would be possible in ordinary greenhouses, and, again, they can be kept cooler in the former than in the latter, especially during the time immediately preceding their disposal. Some growers have found pansies very profitable as well as handy and useful for cutting in Winter as well as for occasional orders for little baskets or dishes filled with plants in bloom. For either or all these purposes it will be well to have a bench of more or less extent, just as the demands of the past may be a guide to the future, in the greenhouse.

Begonia Gloire de Lorraine.

Now is the time when the most unerring judgment is needed in order to get Begonia Gloire de Lorraine in shape for Christmas. The plants should be encouraged in every way possible, not only to make growth but also to form beautiful, shapely specimens. Light shade from the direct rays of the sun is necessary for the protection of this begonia, but the plants should nevertheless have a light, airy situation in a growing temperature, and careful attention given to watering at all times. They will also now need staking neatly with the object of making every branch count for as much as is possible.

Crotons.

Crotons planted outdoors in beds during the Summer should by this time have been taken up, potted and stored in the greenhouse. It will be found that these plants have now material for splendid cuttings for the formation of new stock, which should be utilized just as soon as bottom heat is available for quick work in rooting. The method of mossing the tops may with advantage be practised when these tops are large and branched, but in the case of small and medium size tops it will be found more expeditious to simply sever them from the parent plants and insert them in the sand in the propagating bench where under favorable conditions they will root in about three weeks. Croton cuttings when in the sand should be kept constantly moist and it will facilitate matters also if a glass cover is placed over the portion of the bench in which they are located.

Poinsettias.

In order to prevent poinsettias in pots or pans drawing up to an undesirable length they should be kept as near the glass as possible from now on. As the bracts make their appearance the temperature of the house may be gradually increased, and the plants given an occasional watering with liquid manure; but great care is needed in feeding as well as in watering them with clear water.

Miscellaneous.

Now is the time to determine as nearly as possible what the demand will be for pans of hyacinths, tulips, etc. for Easter. Last year the call in many sections for pans of white hyacinths was far greater than the supply.

Don't forget to frequently ascertain the actual condition of all bulbs covered with soil, or any other material, outdoors.

Insurance of Greenhouse Boilers.

The disastrous boiler explosion which occurred in the greenhouse establishment of George M. Kellogg, at Pleasant Hill, Mo., on Thursday morning, September 26, 1907, (an account of which appears elsewhere in this issue), entailing a loss of some \$35,000 on the greenhouse equipment irrespective of that sustained by damage to stock and consequent loss of produce, and the fact that Mr. Kellogg carried no insurance on his materials, boilers or on stock damaged by the explosion, suggests the thought that this method of protection against losses of the character referred to is not taken advantage of by florists to the extent that it should be.

Whatever the cause of the explosion in the present instance, there is a probability of just such occurrences taking place in other establishments where steam is the method of heating, and it would seem to be a duty on the part of every owner of such plants—one which he owes to himself—to safeguard his property against all such happenings.

In conversation this week with a representative of the Fidelity and Casualty Company of this city, who has had a wide experience as a boiler inspector for that insurance company extending over many years, he stated that low pressure boilers, such as are employed in greenhouses, on account of non-use in Summer and atmospheric conditions are apt to deteriorate, rendering thorough inspection absolutely necessary before being started up again. This inspection is all the more essential, in view of the fact that in the majority of cases a competent engineer is not in charge of such boilers.

The Fidelity and Casualty Company has a department of insurance for all classes of boilers, the policy covering the actual damage resulting to property from explosions. The cost of the yearly premium depends upon the number of boilers in use, and the amount of insurance desired by the owner. This policy also ensures four thorough inspections each year, something of immense value to all concerned. The insurance company mentioned will be glad to supply full particulars regarding rates, conditions, etc., on application. The address is 97 Cedar street, New York City.

It seems to us that the matter of insurance of greenhouse boilers is well worthy the consideration of every one who operates a plant-growing establishment.

Edgar Sanders.

Our obituary column this week contains a record of the life work of our greatly esteemed friend, Edgar Sanders, Chicago, Ill., who peacefully entered into his rest on Sunday morning, September 29, 1907, at the ripe age of 80 years. His illness was of over five years' duration, first brought about by a shock of paralysis in July, 1902, followed by another shock some six weeks ago. Throughout the whole period of his confinement to his room, his every want was faithfully ministered to by his loving daughter, Mrs. Victor, with whom he had for many years made his home, and by the other members of the family; that fact, combined with the visitations of his numerous friends, helped to mitigate the depression of spirits which sickness always brings, and he remained cheerful to the last.

The career of Mr. Sanders conveys a great and lasting lesson to the young man of the present day whose only inheritance is that of humble birth, the possession of an indomitable will and a perseverance that brooks no obstacle placed in the way of progress in self-improvement. Relying on his own resources only, self taught to a very large degree, yet never missing an opportunity to improve his condition in life, intellectually as well as in a business sense, this dear old man who has just been taken from us forged his way to a position of comparative affluence and great respect in his chosen calling. By his writings on horticultural subjects, by his interest and active participation in the work of organizations devoted to the advancement of his profession, he did much to promote and further the cause of that profession; and herein he set a noble example to all who would see horticultural interests in America reach their highest and best development.

He loved his chosen life work for its own sake, and while in the pursuit of it he sought a comfortable living for himself and his dear ones, he was the least mercenary of men. The glamor or profit connected with the origination and introduction of new plants never had attraction for him at any time, so far as we know. Not along these lines will the name of Edgar Sanders long remain enduring in the horticultural annals of America, but because of a life well spent and duty as a gardener, as a florist, and as a citizen, well and faithfully performed.

The great popularity of Mr. Sanders proceeded from his unvarying amiability, from the unflinching interest he took in all that made for the welfare and delectation of his fellow man, from his rugged honesty, his complete unselfishness, and last, but not least, from the pride he took in his profession and all that dignified it. The heritage he leaves to his sorrowing ones is not that of great riches, but it is the priceless inheritance of an unsullied name; and with it is the inspiring knowledge that, by all to whom he was known their unanimous and deserved opinion of him is, he was in every respect a man. Requiescat in pace, our faithful co-worker, our friend of many years' standing—Edgar Sanders.

Standardizing Plant Names in America.

Last week we published two very interesting communications on the subject of standardizing plant nomenclature in the United States—one from Dr. Wilhelm Miller; the other, from James MacPherson of Trenton, N. J., each of whom holds views on the subject at issue, different from those of the other.

Mr. MacPherson, in a recent number of The National Nurseryman, recommended the adoption by American catalogue makers, and others concerned, of the nomenclature used in the various "Kew Guides," with a view to bringing about greater uniformity in plant names here, adding that "neither Nicholson nor Bailey can be relied upon for standard names." Our esteemed correspondent, Joseph Meehan (page 363) recommended the adoption of the plant names in Index Kewensis, saying that in all his writings and in his business the late Professor Thomas Meehan adhered to the names as given in that work. It is from these remarks of Mr. Meehan that the correspondence referred to has arisen.

Each of our correspondents appears to have good grounds for his assertions, and the matter is an important one deserving of the fullest discussion, to the end that some standard work be generally accepted in this country as the final authority on plant names and descriptions.

As we have pointed out in some previous remarks on this question, the S. A. F., a number of years ago, voted to adopt Nicholson's Dictionary of Gardening as its guide in the matter of plant nomenclature, and that decision is, as far as our knowledge goes, still operative. There was, however, as we have before pointed

out, no Bailey's Cyclopaedia of American Horticulture in existence when the S. A. F. made its ruling. No comes along Mr. MacPherson with the allegation that "neither Nicholson nor Bailey can be relied upon for standard names," and that the Kew Guides, or Index Kewensis, are the only safe authorities in this connection. It would seem, therefore, that to these latter documents we should naturally turn for guidance in plant nomenclature; and yet, according to Dr. Miller, Index Kewensis is itself not without its deficiencies; and Mr. MacPherson says the Kew Guides, which are supplements of Index Kewensis, are not wholly complete, but give only "the majority of species and well marked varieties in cultivation anywhere." This leaves us somewhat at sea without a rudder, safely and wholly formed by which we can steer into the desired haven.

A very good claim has been made for Bailey's cyclopaedia being recognized and accepted as the nomenclature authority for the horticultural trade in the United States, namely, that the book is American; and if Mr. MacPherson will show specifically wherein this excellent work is in this particular respect unreliable, or the defects, if any, he then emended, we think the adoption of Bailey's cyclopaedia along the line of plant nomenclature should be made general by the craft and other having to do with this matter in America. And, as Dr. Miller points out that certain catalogue makers have already adopted the work named as their guide, as far as plant names are concerned, it would seem that that in a fair way to become the standard practice in the country.

The subject appears to us to be important enough for the S. A. F. and our other leading horticultural organizations to consider and arrive at some final conclusion thereon, for the need of a uniform plant nomenclature is self-evident, and plans that will tend to bring about such should be put into operation at the earliest moment.

Our Horticultural Press.

In his remarks before the Congress of Horticulture held at the Jamestown Exposition, Norfolk, Va., September 23-27, 1907, a brief summary of which appears in this week's issue of The Florists' Exchange, Leonal Barron, of New York, pays a high tribute to the horticultural trade journals published in America, stating that trade journalism here has "reached a point of excellence unapproached by the gardening press of any other country." Mr. Barron, however, complains of an apparent "quadruplication" of the news, the four florist trade papers producing the same news, to a very large degree, and appearing about the same time each week.

This latter condition is one that cannot be avoided and is the fate of all purveyors of news, whether through the medium of the daily press or the weekly trade paper, and is really a compliment to the alertness of the various correspondents of the respective trade papers. Their field is one and the same, and their mission is to collect all the "news" pertaining thereto; and if the work is fully and faithfully done, as it seems to be, duplication or "quadruplication" is inevitable. We refer now to actual "news," and not to pater or gossip, which has little or no value, and which some seem to regard as news, and waste space upon in consequence of this delusion.

There is, however, a wide difference in the character and value of what may be termed the solid or permanent portion of the reading matter provided weekly by each of the four papers referred to; and it is this that, we imagine, Mr. Barron refers more particularly and praises so highly.

Regarding general horticultural literature in America, Mr. Barron questions whether it is as representative of present day conditions as it was years back when horticulture was less advanced than it is now and he points out the lack of an adequate "journal of record," types of which, he says, were found in Hovey's Magazine, Downing's Horticulturist and Garden and Forest, all of which have ceased to exist or have been merged into other modern publications. There is considerable truth in Mr. Barron's avowal in this respect although the field covered by Downing and Hovey is not altogether without representation furnished by the various class papers now published. Garden and Forest had a sphere and catered to a clientele almost all its own, particularly as regards the scientific side of horticultural art, and it was not appreciated to the extent it should have been because it appeared before its day. The times were not yet ripe for horticultural literature of the type it provided, except among a limited patronage. But we are getting nearer that goal every day and when the opportune moment arrives, doubtless the need of a fitting periodical will be supplied.

Mr. Barron classes the new style of horticultural magazine that has recently appeared in this country as "stimulating." The characterization is apt, for stimulating they certainly are, even to the degree of inducing super-sanguineousness as to gardening results in the minds of those who absorb and assimilate the stimulation supplied.

October 5, 1907

OUR READERS' VIEWS

The Education of Job and Other Matters.
Editor Florists' Exchange.

I am sorry to see that the efforts of some very intelligent men and able writers to "educate" Job have ended in failure. He should at least have drawn some lessons from the castigation he received from Mr. Cameron. First, he would or should notice that Linnaeus was an undutiful son, thereby breaking one of the commandments, no doubt forfeiting the promise connected with it, to say nothing of the bad effect the example might have on those who read his "life," especially as that act of disobedience was the direct cause of his becoming a "great man." He would have learned further that "man's unhappiness" is caused by his "ignorance of nature," and not by an empty pocket; also that Linnaeus "staked his chances on this world and had to suffer much." This should be a hint to Job that he should choose his "Golden City" if he would avoid suffering. He would learn further on, that Mr. Cameron himself has had to "suffer," in some unaccountable way, all because of Job's "inherited narrowness." No doubt he was suffering when he wrote his letter. If he would make known the seat of his trouble, I guess Dr. Bunyon could relieve him.

Mr. Cameron's letter is full of "education," even without the quotations; and if Job was not the onkey he is he would have profited by it. Considerable printers' ink could have been saved by just saying that Linnaeus was the founder of a system of botany which has long ago been superseded by the natural system now taught in the schools. Botany, if it has not made the "world more pleasant," has certainly made it considerably more interesting.

That "bottomless pit" mentioned in Mr. Cameron's letter reminds me that George Watson has been hawking bouquets at his Satanic Majesty, doubtless with the expectation that the Old Boy will reciprocate at some future time. Evidently George has come to the conclusion that Paradise to him is lost, and with characteristic forethought and caution extends sympathy and "condolences" where he considers they will do most good.

I see Job calls particular attention to his "trousers"—probably the same old pair he wrote about some years ago. They must be built after the manner of Paddy O'Rafferty's leather breeches; anyway he has a right to be proud of their lasting qualities.

It seems to me that Rip Van Winkle drank out of the wrong kind of receptacle; had he drunk out of a bottle things might have been different, and he would not have been afraid to face Mrs. Van. Burns says, "Wi' usquebae, we'll face the devil." This reminds me of the first verse of a song—not a Sunday school song:

A man can drink an' no' be drunk,
A man can fecht an' no' be slain,
A man can kiss a bonnie lass
And aye be welcome back again.

The above verse is to be perused only by "the least intellectual of your readers."

A letter signed I. L. Powell, in last week's Florists' Exchange, relating to the private gardener and the S. A. F. O. H., is quite interesting. I think with Mr. Powell, that there is "no good reason why there should be any general feeling of unfriendliness." The catch-string hangs out, and the right thing for the private gardener to do is to join the society, go to the conventions, speak and vote for what he considers his rights and against what he considers his wrongs. He will never do any good by staying at home and kicking.

In comparing the private gardener with the commercial florist Mr. Powell remarks that the private gardener develops "higher cultural skill." This assertion is not borne out by what we see in New York City; certainly the flowers grown on private places and sold to the retail stores and in the commission houses are in most cases far inferior to those grown on commercial establishments. I also take exception to Mr. Powell's remarks imputing carelessness on the part of the S. A. F. O. H. in selecting officers. The officers of the S. A. F. O. H., from the president down, have always been carefully chosen, and have always given entire satisfaction to the society.

I would like to record my appreciation of that essay headed, "Breeding and Propagating of Florists' Flowers" on page 436 of The Florists' Exchange. It is comprehensive, modest, educational and to the point, written altogether from a commercial grower's standpoint, and not a "heresy" in it. JOHN BIRNIE.

CLUB AND SOCIETY DOINGS.

TARRYTOWN, N. Y.—The regular monthly meeting of the Horticultural Society was held Friday evening, September 27, President Howard Nichols in the chair. William Will, Katonah, N. Y., and Alex. Maitland, Irvington, N. Y., were elected to active membership. Some very good exhibits of vegetables were on the tables, which created a lively discussion as to methods of judging. Scott Brothers, Elmsford, N. Y., exhibited a few of the best varieties of dahlias.

LENOX (MASS.) HORTICULTURAL SOCIETY.—The regular meeting of the Lenox Horticultural Society was held Saturday, September 21, Vice-president W. Jack in the chair. William McLeod and M. T. Smith were unanimously elected members. Messrs. C. Jenkins, A. H. Wingett and A. J. Loveless were appointed a finance committee for the chrysanthemum exhibition. A. Jenkins gave a description of his recent visit to England, among the most interesting features of the trip being visits to the Wolverhampton and Shrewsbury Summer exhibitions. A magnificent cup was presented to the society by Henry A. Dreer, Philadelphia, for competition at the Fall exhibition and should prove an incentive for more members to compete in the class for miscellaneous group of plants.

The following question were found in the box: What is the best soil for sweet peas and what are the best varieties? A very interesting discussion followed, the consensus of opinion being that a soil well enriched with barnyard manures and deeply spaded, upon which no similar crop had been grown for some time was the best suited for sweet pea culture. With most growers, sweet peas have done remarkably well this season, and the following list of varieties was considered the best in their different colors: King Edward (scarlet), Countess Spencer, Gladys Unwin, Miss Willmott (pink shades), Helen Peirce (mottled), Lady Grisell Hamilton (lavender), Othello (dark), Mrs. E. Kenyon (yellow), Dorothy Eckford, Nora Unwin, White Wonder (white), Navy Blue (blue). The novelties, such as Frank Dolby, Mrs. Castle and others, were grown only in a limited way, and it was the general impression that they would have to show a marked improvement before displacing any of those named in the list of varieties.

G. H. INSTONE,
Secretary.

The American Pomological Society.

The thirteenth biennial session of the American Pomological Society was opened on September 24, at the Jamestown Exposition, Norfolk, Va., in the Court of States Exhibit Building, the Society for Horticultural Science participating in the program.

A greeting was extended to both societies in a short paper by Professor L. H. Bailey, who was not able to be present personally.

Herbert J. Webber, of Cornell University, gave an interesting talk on experiments made in crossing citrus fruits, mainly with the aim of producing hardy, or frost proof varieties.

G. B. Brackett, United States Pomologist, gave a review of work done within the last two years in the way of originating new fruits; and W. R. Lazenby of Columbus, O., read a paper on "The Origin and Improvement of Some Horticultural Varieties in Ohio."

In discussing the papers, Mr. Macoun, of Ottawa, Canada, said that in the Dominion, where they had an immense area of land, extending almost up to the Arctic Circle, where the problem of producing an apple that would stand their Winters was an important one, they were working with promise of good results, crossing the *Pyrus baccata* so as to produce apples of the size of the Transcendent Crab.

C. J. Patten, referring to some remarks made by Mr. Brackett, said that in his existence he had found that in cross breeding, the pollenizing parent has very much more to do with the result in the tree and in the fruit than has the female parent. Professor Hansen disagreed with this opinion, stating that he had found the opposite to be the case.

A paper on the Hood River Valley country, written by C. J. Lewis, was read by Professor Craig, secretary of the Pomological Society, which led to a discussion of the possibilities of that country. Prof. Vandeman making the statement that during the past year apples had been sold at the station for \$3.25 per 50-pound box, or \$9.75 per barrel, the cost of raising the apples, spraying, picking and packing, being only 50c. per box. Mr. Close, of New York, said that apples grown in Delaware had been sold in New York, at the rate of \$1.25 per barrel, which brought forth applause from the Eastern contingent.

The second day's session was opened by a talk on "A Promising Treatment for Control of Brown Rot of Peach," by W. M. Scott, United States Bureau of Plant Industry. Mr. Scott stated that from experi-

ments made during the past year in Missouri, he had found that a preparation consisting of 10 pounds of sulphur, 15 pounds of self-cooked lime to 50 gallons of water, sprayed on trees, produced nearly 90 per cent. of sound fruit on Elberta peach trees, while other preparations produced a much less favorable result. Where the application was made early enough, it also controlled scab and bitter rot.

Mr. Waite, in the discussion, said that in his opinion the most important fact was that for the first time a fungicide effective against brown rot or scab had been applied to foliage without burning it.

William Stuart, Burlington, Vt., read a paper on "Seasonal Influences in Carnation Crossing Relative to Seed Production."

W. T. Macoun, of Ottawa, Canada, read a paper entitled, "Fruits of Canadian Origin," stating that about 300 named apples had originated in Canada and perhaps 200 other kinds of fruits. The apple is the most important Canadian fruit, the most notable being the Fameuse, which, according to the best evidence, originated along the St. Lawrence; next the McIntosh, originated at Dundela, Ont.; the Scarlet Pippin; St. Lawrence, Ontario; Baxter, Bank's Gravenstein and Walter. Of gooseberries, the most important varieties originated in Canada are the Red Jacket and Pearl; of pears, the Dempsey and Ritson; peaches, Banner, Fitzgerald and Tyhurst; plums, Kingston, Glass; grapes, Brant, Canada and Kensington.

President Goodman, delivered his annual address, in which he gave a history of the society since its formation in 1848 and referred to the enormous progress made in horticultural matters since that time. He recommended uniform packages for apples, as well as grading.

M. B. Waite, U. S. Bureau of Plant Industry, spoke on "Control of Pear Blight on the Pacific Coast." The blight, he said, was introduced some 8 or 9 years ago, presumably with nursery stock. Bartlett pear is the variety mainly grown on the Coast, and whole regions were threatened with destruction. It was Mr. Waite's endeavor while there to secure co-operation among growers, looking forward a systematic cutting out of the blight wherever it appeared, the main difficulty being in getting workmen whom it was possible to educate in the art of discovering and treating the disease. The best time for cutting is in the Fall; tools used should be immediately disinfected with corrosive sublimate and wounds painted over with white lead.

Professor U. P. Hedrick, of New York Experimental Station, read a paper on "Mendelian Characters in Tomatoes."

C. G. Patten, of Iowa, gave his deductions from experimenting in breeding orchard fruits for the Upper Mississippi Valley, among these deductions being: That the Baldwin, Rhode Island Greening, Spitzenburg and Newtown Pippin are wholly worthless in tree over an area of some 700 miles north and south, and 1,200 miles east and west between the lakes and mountains; and that such varieties as the Fameuse, Golden Russet, Perry Russet, Tolman Sweet and Northern Spy are only partially successful in a very limited area on the eastern and southeastern border of this district.

Professor H. N. Starnes gave results of investigations and experiments in the Southern Atlantic and Gulf States with specimens of fig trees obtained from California, France, Lombardy and Naples. Many of these trees made extraordinary growth, a height of sixteen feet after a couple of years being not unusual. The best variety he found to be the "Pear Dure," which promises well, and results justify the hope that fig growing in the Gulf region may yet become a useful industry.

The history of fruit-growing in the States of Florida, Maryland, Ohio and Virginia was given in a series of papers by leading members in those States.

A. N. McNeil, Department of Agriculture, Ottawa, spoke on the "Operation of the Canadian Fruit Marks Act." His account so favorably impressed the members that after some discussion the following resolution was adopted by the society:

RESOLVED: That a committee of five be appointed by the chair to confer with the United States Department of Agriculture with the object of securing the enactment of national regulations intended to secure for us the substantial benefits conferred upon the Canadians by their "Fruit Marks Act." They were also requested to secure the co-operation of State Horticultural Societies and trade organizations.

The president appointed the following committee to act in such capacity: Messrs. C. L. Watrous, of Iowa; W. A. Taylor, Washington; W. C. Barry, New York; Mr. Monroe, of Michigan, and Mr. Williamson.

The officers of the previous term were re-elected, viz.: President, L. A. Goodman, Kansas City, Mo.; vice-president, T. V. Munson, of Texas; secretary, John Craig, Ithaca, N. Y.; treasurer, L. R. Taft, Agricultural College, Mich.

E. J.

Obituary

Edgar Sanders.

After a long illness, borne with exemplary patience and fortitude, Edgar Sanders peacefully passed away at 5.15 a. m., at his home, 1639 Belmont avenue, Chicago, Ill., on Sunday, September 29, 1907. The funeral was on Wednesday last at 2 p. m., and was largely attended, many beautiful floral designs testifying to the esteem in which our dear personal friend and the friend of the trade generally, was held.

Mr. Sanders was born near East Grinstead, in Sussex County, England, October 10, 1827. His father was gardener on the Crawley estate in that county, a position which he held for upward of fifty years. He died in 1881, his wife, five years later. Edgar was the eldest of fourteen children, and after receiving his education, during a term of four years, went to work at the age of thirteen years, first at anything that came along, then about 1839 or 1840 in West's nursery, then as gardener on a private estate at Lower Tilgate, forging his way up from a boy to foreman of the establishment. Subsequently he held the position of head gardener in two private places near Egham, Surrey. In 1853 Mr. Sanders decided to come to America, and after a trip of five weeks on the ocean, landed in New York on April 29 of that year. He immediately proceeded to Albany, where he found profitable work almost on the day of his arrival there. His first labor was performed in James Wilson's nursery in that city; subsequently he obtained a month's work laying out the grounds of Luther Tucker, who was the original publisher of *Downing's Horticulturist*, but at the time mentioned had started *The Country Gentleman*, for which paper Mr. Sanders began to write at once, and was on its staff for a period of six years. After completing the work for Mr. Tucker, Mr. Sanders became gardener for General John F. Rathbone, of Albany, a gentleman who afterward became famous as an orchidophile. Here Mr. Sanders remained until the Spring of 1857, when he decided to try his fortune in the West, leaving then for Chicago, where he purchased land in the town of Lake View and built his first fifty-foot greenhouse in the Spring of 1857. Land at that time cost some \$700 an acre. He was one of the first commercial florists in Chicago, numbering among his contemporaries in those early days such men as Samuel Brooks, the pioneer florist of the Western city; A. T. Williams, Job Carpenter and others, whose cultures were largely of vegetables, though flowers were also grown. Mr. Sanders raised a general stock of plants, and was noted as a shipper of same all over the country. He opened the first flower store permanently in Chicago on March 5, 1867, at 56 Clark street under the Sherman House. The fire of 1871 checked his career for some time, although he was fortunate in only having the store burned out. He remained away from the retail trade for three years, when he entered this branch again, and continued in it until 1882, when he practically retired from the direct work of florist.

Mr. Sanders was for many years a contributor to the horticultural papers. On arriving in Chicago he became attached to the staff of the *Prairie Farmer*, published in that city, and continued in that position until about 1890. He also conducted a horticultural department of a daily in Chicago, and wrote for the *Orange Judd Farmer*, all at the same time. His first venture at writing for the class papers was commenced at the age of nineteen, when he began to contribute to the *London Gardeners' Chronicle*. He also was a correspondent, from England, to the *American Gardeners' Chronicle*, then published in New York.

As is well known, Mr. Sanders was the esteemed and valued Chicago correspondent of *The Florists' Ex-*

change, until incapacitated through a stroke of paralysis, in July, 1902, the beginning of his illness. His services in our behalf were highly appreciated, not only by the publishers of *The Florists' Exchange* but by the trade in the district which he so ably represented, with whom he was a prime favorite, entering into the spirit of every entertainment taking place there among the craft with the vivacity of a young man.

Mr. Sanders had also, during his busy life, taken an active part in public work. In the 70's he was for three and a half years a commissioner of highways of the town of Lake View, Ill., was supervisor and treasurer of the same town from 1879 to 1883, when it became part of the city of Chicago. He was also its first commissioner of public works. For four years he was deputy sheriff under Sheriff Hanchett and was for a time the late Judge Altgeld's bailiff. During the time of his shrievalty, he, with four other deputy sheriffs, had charge of the jury during the anarchists' trial. He also served as deputy assessor of the town of Lake View.

Mr. Sanders was married before leaving England. His wife died in 1876. He leaves five daughters and eight grandchildren; the daughters, according to age, are: Mrs. Sarah Jane Ludlow and family—Francis, Jessie,

sett's Horticultural Society and at one time donated to that body a large number of old catalogues that he had saved from about 1845 up to the time he began to find such things somewhat irksome to keep. These the secretary considered of quite considerable value to the society.

In his early history in Chicago he was active in landscape work, furnishing the plans from which Calvary cemetery was laid out. He also furnished plans for several gentlemen's places and one for the old Chicago University grounds that was never carried out on account of troubles that occurred to the old organization.

Mr. Sanders became a member of the Stoke Newington and Clapton Gardeners' Society as early as 1846. He belonged to the mechanics' institutes where he could not find gardeners' clubs. In 1850 he delivered a lecture on botany at the Egham Mechanics' Institute, to the working men of the locality. After coming to this country, he helped to organize the Albany and Rensselaer County Horticultural Society and took part in its proceedings. He also aided in organizing a horticultural club in Albany for the familiar discussion of subjects connected with horticulture and fruit growing. In 1857 he helped to organize the Cook County Agricultural and Horticultural Society, and assisted in getting up the first Fall exhibition on land then all open between North avenue and Division street, and Clark and Wells streets.

In 1858 he helped to organize the Chicago Gardeners' Club and was at one time its president. This society was afterward merged in the Chicago Horticultural Society, which lived until the time of the fire. He also helped to organize a grange of Patrons of Husbandry in his home city. He was for many years a member of the Northern Illinois Horticultural Society and contributed some papers before that body. He attended many of the Wisconsin and Indiana horticultural societies' meetings and was an honorary member of these associations. He was likewise a member of the F. & A. M.

Few men were better posted on the development of the florists' trade in America than Mr. Sanders, and an hour or two spent with him was in itself an education along this line. In 1897 he contributed to a Chicago daily newspaper a lengthy article, giving in detail his reminiscences of the evolution of the gardening craft in that city from its earliest times, an interesting contribution of great historical value.

We think it can be safely said that no man connected with the horticultural interests of America was held in higher esteem throughout the country than our deceased friend—an esteem amounting in his own locality almost to reverence. His was a kindly, lovable, sympathetic, generous disposition, and his friends were numbered as legion. Up to the time when illness rendered his once active brain a blank, he continued to take a most lively interest in the affairs of the craft everywhere, eagerly reading every one of the periodicals as they appeared, and when he was able participating in the discussions of subjects under consideration by our readers.

We feel sure the trade will join us in extending sincere sympathy to the sorrowing family in the hour of their great bereavement. A truly good man has gone to his reward.

Tributes from Friends.

Edgar Sanders is dead. These few words proclaim so much sorrow to the horticultural world that when I try to express my feelings I am lost.

I have been intimately acquainted with him for nearly a quarter of a century and for more than half of that time he made my store a sort of business headquarters, his every morning salute to me for years being, "How are you, my boy?" I shall never forget him.

He was the "Grand Old Man" of Chicago, in Western floriculture and horticulture in all its lines, and possessed the love of nature in all its forms and in return was probably the most universally beloved representative of the profession we have ever had.

In his passing away I can only say that I have lost a very dear friend, that the profession has lost one of its brightest exponents and that the world has lost a MAN.

E. F. WINTERSON.

The Late Edgar Sanders

Edgar and Carrie; Mrs. Harriet Ann Le Mont; Mrs. Jessie Kate Victor; Mrs. Mary Alice Spon and son Francis, and Mrs. Caroline Emily Smith and children—Victor, Edgar and Harold. All of Mr. Sanders's brothers and sisters grew up to manhood and womanhood and all were married, eight of them are still living, five being in America now. Three of his brothers served in the War of the Rebellion, one being killed in the Battle of the Wilderness, the other two living until two or three years ago. A cousin, C. C. Sanders, is a well-known nurseryman of St. Louis, Mo.

Mr. Sanders always took an active interest in all matters horticultural, and was elected the first temporary president of the American Association of Nurserymen in 1876, and again president in 1884. He attended the first meeting of the S. A. F. at Chicago in 1884, and rendered some aid in its organization, and was vice-president for Illinois for several years. He had also been president of the Chicago Florists' Club, in which he was a busy worker, having for many years held the office of treasurer of that organization.

He was a corresponding member of the Massachu-

A pioneer florist of Chicago, a steadfast and zealous member of the Chicago Florists' Club since its earliest days, an honored friend of all who knew him, this was Edgar Sanders. Those who like myself have known him for many years admired his sterling qualities as a man, his sociable and kindly disposition.

The younger generation held him in the greatest reverence; to them he was "Papa Sanders," an expression of affection applied to him by all who knew him—and who indeed did not? His memory will live as long as floriculture, which he so ably helped to build up in the West, shall exist.

F. F. BENTHEY.

The obsequies were held at the late home of the deceased, 1639 Belmont avenue, at 2 o'clock on Wednesday afternoon and were very largely attended by florists, Masons and friends in varied walks of life, the Chicago Florists' Club and the Masons attending in their respective bodies. Rev. McLaughlin, priest of St. Peter's Episcopal Church of Belmont avenue, performed the religious ceremony, which was followed by Masonic exercises by Worthy Master Torpe of Lincoln Park Chapter, of which Mr. Sanders had for many years been a member. The active pall-bearers appropriately consisted of six florists, who are members of the Masonic fraternity, as follows: Samuel J. Pearce, Andrew McAdams, John T. Muir, Anton Then, H. N. Bruns, and George Asmus. The honorary pall-bearers were George Wittbold, Ernst Wienhoeber, J. C. Vaughan and F. F. Benthey, representing Mr. Sanders's old florist associates, and Alex. Thomson, Robert Lucas, Hugh Ritchie, and John Cram, selected from his old friends outside the trade. There were a large number of floral offerings tendered from all directions, and at the end Edgar Sanders was certainly surrounded by the beautiful flowers, which in health he so much loved and to the cultivation of which it may be said his life was largely and successfully devoted. One offering was the palm and floral display surrounding the casket, made by Mr. Sanders's old friend, neighbor, and associate for fifty years, George Wittbold. The burial, which was private, was in Graceland cemetery.

Egbert N. Moore.

Egbert N. Moore, aged 77, a well known resident of Waterford, Conn., died suddenly on September 23, 1907 at his home above Quaker Hill. He was found dead in the barn by a member of the family who went to call him when he failed to respond to the usual summons. Apoplexy was given by the medical examiner as the cause of death.

Mr. Moore conducted a nursery establishment. A widow and three daughters survive him.

Breeding and Propagation of Florists' Flowers.

By WILLIS N. RUDD.

(Concluded from page 436.)

The following notes, though hardly proper to be included in the reading of this paper, may be of some interest if subsequently printed.

Some Practical Experiences.

It has been our custom to so time our crossing as to ripen seed for March sowing. These seedlings have been planted in frames and allowed to bloom in the open, those showing desirable qualities being removed to the greenhouse for subsequent trial, the undesirable ones being destroyed, and those not blooming before frost being disregarded, experience having shown them to be generally worthless.

The first bloom has been from July 15 to August 8, varying in different years. The plants blooming earliest have been generally singles and those double enough for commercial purposes, but of medium or small size, with very few of the over double or bursting form. The early bloomers have quite generally been found the freest in bloom through later trials. The bursters have increased in number later, while the singles though still showing, have not been so numerous. The larger numbers of desirable varieties have flowered from two to four weeks after the first bloom, and seldom have any been saved after September 15. A record of each cross has, of course, always been kept, and for several seasons a brief record of each seedling blooming, as regards doubleness and color. These records cover 2,170 separate plants and during a season of confinement to the house were tabulated and summarized in various ways. It should be noted that the records did not cover the entire number of plants from any cross except in a few cases, as sickly or plainly undesirable forms were at once pulled up, and many had not bloomed when freezing weather came on. With these exceptions the notes are believed to cover the ground reasonably well, and to be fairly accurate. No distinction was made between those bursting from over doubleness and those from malformation.

Singleness or Doubleness.

733 individuals (one season's crosses) gave: Singles, 161; commercial doubles, 361; over double or bursters, 211.

1,437 individuals: Singles, 385; commercial, 706; bursters, 346.

2,170 individuals: Singles, 546; commercial, 1,067; bursters, 557.

It will be noted that the sum of the singles and bursters approximates quite closely the total of the commercials.

The earlier crosses seemed to produce more singles and less bursters. The crosses made December 10 to January 1, where plants were at their best, before feeding commenced, produced very nearly an equal number of singles and bursters, with the commercials showing a slight increase over the sum of the other two. The late crosses showed the bursters in excess of the singles and the early and late crosses showed the sum of the singles and bursters in excess of the commercials.

The above should not be considered as at all conclusive, as the mid-season crosses were very much in excess of the early and late ones.

Crosses of one female by various males and the reverse, when there were 100 or more individuals, did not vary largely from the proportions of the 2,170 individuals noted before.

Color.

A large number of tabulations was made and much care was exercised in making them, but they all lead back to one conclusion that is: the color of the seedling is a matter depending entirely upon the individual potency of the parents. The most potent parents as to color were those which were the result of many generations of previous breeding to color. Some reproduced their color better as males, others as females, and others equally well in either case. Special search was made for some indications that the theory that the male has the greater influence on color, was true. It is a positive fact that in these 2,170 crosses, the theory does not hold. I could get no tabulation, the results of which would not be changed by the withdrawal of certain male crosses and the substitution of certain other female or vice versa. It is true that certain mongrel crosses did show a slight preponderance of the male color in the seedlings, but they were few in number and the withdrawal of a very few crosses would have changed the result to the other side.

The Commercial Growing of Ornamental Plants.

By WILLIAM H. TAPLIN.

Read before Congress of Horticulture at Jamestown Exposition, September 23-27, 1907.

The past decade has witnessed great advances in the production of ornamental plants for commercial purposes in the United States, the trade having in some instances attained

William H. Taplin.

are remarkable examples of success.

Cultural Methods.

Broadly speaking, our cultural methods are adaptations of the methods long in vogue in Europe. By adaptations is meant that climatic differences have had to be observed, and some of our methods adapted to those differences as for example, the intense sunlight of our Summer season makes necessary rather more shading on the glass than is required in some parts of Europe, and again, the longer period of hot weather in the central and southern portions of our country give us an advantage in the rapid growth of heat-loving subjects.

As a rule, American plant growers are impatient of delays in the production of marketable stock, the consequence being that the slower growing plants are not handled to any great extent, such subjects being imported from Europe, where labor is a little cheaper, and where time seems to be less of an object. As a result of these conditions such plants as bay trees, box bushes, aspidistras, azaleas and various other plants that require much time and labor in their culture, are imported from Europe.

The Palm Industry.

The palm industry has made wonderful advances of late years, but up to the present time there have not been enough palms of all sizes to supply the demand, this condition causing the importation of large quantities of these beautiful plants from Belgium each season. It is true that a few small palms have been occasionally exported from this country to Europe, but these exports do not approach the imports in value.

The centers of commercial palm growing in this country at the present time are New York, Philadelphia and Boston, the neighborhood of these three cities doubtless producing more palms than all the rest of the country together, and from these cities is shipped the choicest stock of this description that is offered in the interior cities and towns even out to the Pacific coast.

By far the larger part of the palms that are annually sold in the United States are grown here from seed, the imported stock being chiefly in the larger sizes such as are used for decorating. The species thus used are few, and but little change will be noted in the catalogues from year to year, as the qualifications of a useful commercial plant are somewhat exacting. To fulfill the requirements of a plant for this purpose it must needs be a species that is readily obtainable, so that a regular supply of seeds may be had each season, and it must also be of reasonably quick growth, of considerable grace and beauty, and having foliage of an enduring character. Thus we find that out of a possible hundred of new species of palms that have been introduced to cultivation in the past thirty years, there are less than a dozen to be found in the average trade lists.

The most popular palms of the present day are the howeas, (otherwise and more generally known as kentias) the seeds of which are imported by the million each season from a certain small island in the South Pacific ocean. These howeas, or kentias, are grown best in a night temperature of about 60 degrees, and this may be considered as the low average temperature for palm growing, in comparison with the high average palm temperature of 68 degrees that is ordinarily given to *Areca lutescens*. There are more pinnate-leaved palms in the florists' list than there are of the fan-leaved section, the latter finding less favor with the general public, about the only representatives of the fan-leaved section of palms that are grown in quantity being a few species of *livistonas* and *chamærops*. Some of the date palms, or *phoenix*, are used for decorating, and these are also used quite extensively for outdoor planting in the extreme South and Southwest.

As already hinted, there is a dearth of novelties of real value in the palm trade, but among the few of recent introduction there is one phoenix that is being taken up extensively, namely, *P. Roebeleni*, a very charming dwarf species from Siam, this palm now being procurable in quantity, owing to a more liberal supply of seeds that has been received in this country during the past three years.

[To be Continued.]

The American Horticultural Press.

At the Congress of Horticulture held at the Jamestown Exposition, Norfolk, Va., last week, Leonard Barron of New York, presented a brief resumé of the present status of the horticultural press in America. Mr. Barron said in part: It might well be questioned whether the horticultural press of the present day was as thoroughly representative of horticultural conditions as it was years back, when horticulture in America was actually less advanced than it is now. While there had been marked and wonderful developments along special lines, there was a lack of an adequate journal of record. He cited Downing's *Horticulturist*, Hovey's *Magazine* and *Garden and Forest* as types of this class.

Trade journalism in America had reached a point of excellence unapproached by the gardening press of any other country, but in this field there was an apparent duplication or rather quadruplication, there being four florists' trade papers which, to a very large degree, produce the same news, and all appearing about the same time each week. The weekly gardening paper of general appeal had so far failed to "make good," but, on the other hand, there was a distinctive type of magazine that made a special appeal to the people entirely outside the ranks of the specialist—people who perhaps had not as yet been actually interested in gardening affairs. He grouped the various journals into three divisions—trade, record, and stimulating. It was the first and third that were characteristic of the present day horticultural press in America, and it was more than probable that there would be a revival of the record publication as an outgrowth of one of the others.

CHRISTMAS TREES.—In a recent decision by the Board of General Appraisers, New York, on the authority of G. A. 4478 (T. D. 21372) Christmas trees were held to have been properly classified as unenumerated unmanufactured articles under section 6, tariff act of 1897, the board overruling the importers' contention that the merchandise should have been classified under paragraph 700 as wood unmanufactured.

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail florist firms advertising under this heading will accept and fill orders for flowers and floral designs forwarded them by mail, telegraph or telephone, the usual commission of 25 per cent. being allowed.

\$25.00, payable quarterly in advance, will entitle the advertiser to a four-line card, under this heading, for one year, 52 insertions. For every line additional to four, \$5.00 will be charged. Four lines will average 32 words; each additional line, 9 words. Each advertiser receives one copy, free, of our Florists' Telegraph Code.

New York.

YOUNG & NUGENT, 42 West 28th St. We are in the theatre district and also have exceptional facilities for delivering flowers on outgoing steamers. Wire us your orders; they will receive prompt and careful attention.

MYER, 611 Madison Ave. My facilities for delivering flowers for any and all occasions are unexcelled. Can give prompt service to steamer and theatre trade. Telegraphic orders solicited. Telephone, 5297 Plaza.

Kansas City, Mo.

SAMUEL MURRAY, 1017 Broadway. I will deliver orders for flowers in Kansas City and vicinity promptly. A first-class stock of seasonable varieties of flowers always on hand. Wire me your orders.

Detroit, Mich.

JOHN BREITMEYER'S SONS, Broadway and Gratiot Avenue. We cover all Michigan points and large sections of Ohio, Indiana and Canada. Retail orders placed with us will receive careful attention.

Denver, Colo.

THE PARK FLORAL CO., 1508 Broadway, J. A. Valentins, Pres. Orders by wire or mail carefully filled; usual discounts allowed. Colorado, Utah, Western Nebraska and Wyoming points reached by express.

Cincinnati, O.

HARDESTY & CO., 150 East Fourth, sell the best grade of flowers grown. Retail orders from distant points for delivery in Cincinnati or surrounding territory will receive prompt attention. Telegraph us.

Dayton, O.

W. O. MATTHEWS, FLORIST, 18 West Third Street. Flowers in any arrangement for all occasions for Dayton and vicinity. Personal attention given to all orders. Long distance telephones.

Dallas, Texas.

LANG, THE FLOEIST, the largest flower store in the South. Floral designs and all flowers in season; personal supervision and prompt service in Oklahoma, Texas, Louisiana. Mail and telegraphic orders solicited.

Louisville, Ky.

JACOB SCHULZ, 644 4th Avenue. Personal attention given to out-of-town orders for Louisville and surrounding territory. Have a choice line of seasonable flowers always in stock; delivery facilities perfect.

Indianapolis, Ind.

BERTERMANN BROS. CO. Our facilities for executing orders in an efficient manner are unexcelled. Our shipping territory includes the surrounding states. High grade flowers; expert workmanship.

Albany, N. Y.

EYLES, 11 North Pearl Street, cut flowers or floral designs delivered to any part of Albany and vicinity on telegraphic order. Personal attention given and satisfaction guaranteed.

Chicago, Ill.

HAUSWIRTH, The Auditorium Florist, 232 Michigan Avenue. The quality of our work is of National repute, and we are prepared to execute commissions in first-class style in Chicago and its environs.

Retailers desiring a share of out of town trade should be represented by a card in this column.

FOR THE RETAILER

For reproduction on this page, we solicit from our readers engaged in the Retail Trade, good, clear photographs of subjects that are of general interest, such as store interiors, designs of different classes, new delivery wagons, etc.

The Summer is over and the retail florist is gradually getting things into running order. Alterations, painting and general tuning up should be finished by now, and it evidently is, judging by the smart appearance of most of the stores. Windows are taking on a business-like look and indicate prosperity.

The inevitable rubber plant and Boston fern are seen in large numbers, especially in the uptown stores, and they should prove ready sellers at the prices quoted. At the more important stores, fine collections of palms and foliage plants are to be seen at this season, and their fresh and thrifty appearance is a safe indication that they have not been long out of the hands of the grower.

Ficus pandurata and Others.

There is a gradually increasing demand for a variety, which wide-awake growers are alive to, and their experiments along these lines have added many valuable additions, which have been much appreciated by the customer. *Ficus pandurata* has proved itself, and is a general favorite, its unique and handsome foliage, together with its lasting qualities, assuring its success as a commercial plant. It has been much in evidence as a window attraction this Summer and stands all kinds of treatment.

Ficus elastica variegata is one of the most attractive of the ficus family and has been largely grown in the vicinity of London, where it is a great favorite.

Ficus Parcelli is not as well known, but it is distinct and decorative.

Other Decorative Stock.

Crotons in variety form a splendid addition to a window display, the highly colored sorts attracting much attention and giving a distinct Autumnal appearance to the arrangement.

Many varieties of dracaenas that have hitherto been considered as sure "stove plants" are now to be seen in every prominent flower store. *Dracaena Goldieana* is perhaps the most beautiful of those in general use and lasts surprisingly well. *D. Godseffiana* and *D. Sanderiana* are useful in the small state for centers in fern dishes, and do much to brighten them up. *D. Massangeana* fragrans and *D. Lindenii* are all good tough plants; some well colored plants of the latter are now in the market.

I have had experience with *Phyllotænium Lindenii* for house decoration and find it surprisingly tough; it is one of the most beautiful stove plants, but is never seen in large numbers. Plants of this character command good prices wherever exposed for sale.

Antirrhinums, dieffenbachias, marantas, etc., while they are not the best for lasting, do as well as flowering plants and are quite as attractive.

Kentia Belmoreana and *K. Forsteriana* have proven indispensable house plants. Phoenix are more durable but lack grace, which is a most essential quality in a palm. *Areca lutescens* has died a natural death, owing to its poor lasting qualities, which is a pity, for it has much to recommend it. *Rhapis humilis* and *R. flabelliformis*, known as Japanese palms, are extremely tough, and useful where a formal plant is needed, and for slow growing plants are not high priced. *Caryota urens*, the "fish tail" palm, is being largely used here and finds many admirers; these are a distinct change from the more formal kinds of house palms, and last the season equally as well as kentias. *Cocos flexuosus* is in regular supply in this city, and surely has no equal for grace and airiness; its long plume-like foliage being highly decorative. *Cocos Weddelliana* is almost impossible to obtain in large sizes; a batch in six-inch pots seen at the Philadelphia convention were the first plants of any size observed for a long while. These palms are

rarely allowed to attain any size, owing to their usefulness for ferneries.

Bamboos have been used with success for house decoration and well grown plants in tubs look extremely well.

Formal Decorations.

There is a style of architecture much employed in New York for interior decorating that calls for the most formal kinds of plants. Palms and ferns are of no use whatever, bays and boxwoods are the only things to be used and the problem presents itself how to keep them alive under these conditions. The architect says a bay tree must go here and a boxwood there, and it has to be, even if there is a radiator within a foot of the plants, with the result that it only has a few weeks to live. The introduction of a formal house plant, with the durability of a palm, would be a blessing to the florist. I have seen bays do perfectly well for six months in a hall where the heat was never turned on, but it is a rare case where the temperature of a house is considered for the sake of the plants, especially when these are rented from the florist. In the case of palms that have been under my personal observation I have seen them last the season in such situations in almost perfect condition under expert care.

The care of plants in over-heated houses is a problem at all times; the man who can keep them alive for a season under all conditions is one to be taken care of. It is my experience that some plants will live almost indefinitely in rooms lighted with electricity, where day-

View of Interior of Hoffman's Store, Boston, Mass.

light never penetrates. Plants under these conditions require very little water, and should be left right in the room; if taken into the daylight they will not long survive. Aspidistras and phoenix are undoubtedly the toughest plants for the house, and are the best for what is generally known as a "bad place."

D. RAYBUN.

CROTON PENNINGCKI.—This new croton is figured in a colored plate accompanying the Issue of *Revue de l'Horticulture Belge et Etrangère* for September 15, 1907. The originators are Messrs. G. Penningck & Son, horticulturists, Gentbrugge (Nord) lez-Gand. In a note in the same periodical Charles Pynaert says the variety is one of the prettiest introduced into commerce. The leaves are 15 centimeters long and five wide, are numerous, very compact, the petiole short, of a deep brownish green, brilliantly marbled, and passing from orange yellow to sparkling red. The young leaves are pale yellow. It is believed the plant will prove especially serviceable for florists' purposes, both for indoor and outdoor culture. As a dwelling house subject it is recommended, as it will stand a moderate temperature and not lose its leaves. As shown in the colored plate, it is certainly an attractive croton.

GROWING AND CURING HOPS.—This subject is dealt with by W. W. Stockberger, Expert in Drug-Plant Investigation, Bureau of Plant Industry, in *Farmers' Bulletin* 304, Department of Agriculture, Washington, D. C. It is an instructive document, and will be found of much service to all interested in hop culture.

THE EXHIBITIONS

Coming Exhibitions.

(Secretaries of societies not mentioned here will oblige by forwarding schedules of their respective shows.)

OCTOBER 4.—New Jersey Floricultural Society, Annual Dahlia Exhibition, in Elks Hall, Orange, N. J. Secretary, Henry Halbig, 85 Valley street, Orange.

OCTOBER 23 and 24.—Lenox (Mass.) Horticultural Society, Chrysanthemum Exhibition, Town Hall, Lenox, Secretary, G. Instone.

OCTOBER 30-31.—Monmouth County, (N. J.) Horticultural Society Tenth Annual Exhibition. Secretary, H. A. Ketel, Red Bank, N. J.

OCTOBER 31 and NOVEMBER 1.—Morris County (N. J.) Gardeners and Florists' Society, Twelfth Annual Flower Show, Secretary, E. Reagan, Madison, N. J.

NOVEMBER 6-12.—Horticultural Society of Chicago, Annual Exhibition. Assistant Secretary E. A. Kanst, 5700 Cottage Grove avenue, Chicago.

NOVEMBER 6-8.—Chrysanthemum Society of America, American Institute, 19-21 W. Forty-fourth street, New York. Secretary, David Fraser, Pittsburg, Pa.

NOVEMBER 6-8.—Denison (Tex.) Civic Improvement League, Annual Flower Show. Secretary, T. W. Larkin.

NOVEMBER 6-8.—New Haven (Conn.) County Horticultural Society, Seventh Annual Exhibition, in Music Hall. Secretary, Walter Koella, 58 Bishop street, New Haven, Conn.

NOVEMBER 6-8.—Tarrytown (N. Y.) Horticultural Society, Ninth Annual Exhibition, in Music Hall. Secretary, E. W. Neubrand, Tarrytown, N. Y.

NOVEMBER 5-7.—Nassau County (N. Y.) Horticultural Society, Glen Cove, N. Y., Annual Exhibition.

NOVEMBER 11-17.—Horticultural Society of Buffalo, First Annual Flower Show. Secretary, John H. Tranter, P. O. Box 904, Buffalo, N. Y.

NOVEMBER 8-10.—Massachusetts Horticultural Society, Chrysanthemum Exhibition. Secretary, Wm. P. Rich, Horticultural Hall, 300 Massachusetts avenue, Boston, Mass.

NOVEMBER 12-14.—Florists' Club of Washington, Annual Exhibition. Secretary, Chas. McCauley, Eighteenth and Kearney streets N. E., Washington, D. C.

NOVEMBER 12-16.—Ontario Horticultural Society, Exhibition of Chrysanthemums, carnations and roses at Toronto. Secretary, H. B. Cowan, Parliament buildings, Toronto, Ont.

NOVEMBER 12-15.—St. Louis Horticultural Society, Annual Exhibition. Secretary, Otto G. Koenig, 6473 Florissant avenue, St. Louis, Mo.

NOVEMBER 14.—Worcester County Horticultural Society Chrysanthemum Exhibition. Secretary, A. A. Hixon, Horticultural Hall, 18 Front street, Worcester, Mass.

NOVEMBER 14-16.—Arkansas State Floral Society, First Annual Exhibition. Secretary, G. R. Brown, Little Rock, Ark.

NOVEMBER 14-16.—Arkansas State

Floral Society, Annual Flower Show. Secretary, Charles Vestal, Little Rock, Ark.

NOVEMBER 15-16.—Rhode Island Horticultural Society, Autumn Exhibition. Secretary, C. W. Smith, 27-29 Exchange street, Providence, R. I.

Secretary Rich of the Massachusetts Horticultural Society has issued the preliminary prize list for the exhibitions of the society to be held in January, March and May. Copies of the schedule can be obtained by all interested on application to Mr. Rich, 300 Massachusetts ave., Boston.

Newport Horticultural Society.

The Autumn exhibition of the Newport (R. I.) Horticultural Society was held last Tuesday, Wednesday and Thursday in Masonic Hall, and a conservative estimate of its success would be the assertion that it eclipsed all previous shows held by this society. What was of more importance was the noticeable improvement in the quality of exhibits, showing plainly a determination on the part of commercial as well as private growers to excel in the cultivation of the products of which those exhibited were samples.

There were in the schedule seventy-seven classes in all and with the exception of two or three the entries were numerous which resulted in keen competition. It has been seldom the case at shows of this society that more than four groups of plants were staged; this year there were eight in three classes or to show more clearly the nature of the competition in these there were seven entries in three classes and one in the third. In class two, for a group of palms, ferns and foliage plants to cover 100 square feet, Oscar Schultz was first with a very effective group of palms, ferns, crotons and dracaenas, with a sprinkling of other plants such as phyllanthus and alpinias. Colin Robertson, gardener for Mrs. Robert Goelet, was second with another good group, lacking however in looseness of arrangement. In this class John Marshall, manager of the By-the-Sea greenhouses, put up one that was a distinct departure from the stereotyped form of Newport groups, and for which he would without doubt have come in first had his material been more suitable for the work; as it was the arrangement was much admired. He came in third.

In class one there were three entries. Colin Robertson was first with a group composed in the main of palms, ferns, and anthuriums, James Boyd, gardener for Mrs. Astor, was second with a group of fairly good palms and ferns along with a sprinkling of begonias and gloxinias.

The contest for the best table of decorative foliage plants brought out some good stock from four exhibitors. David McIntosh was first with a table of even plants among which were dracaenas in variety, crotons, heliconias, marantas, Panax Victoria, Aralia Veitchii, Nephrolepis Whitemani, Selaginella Watsoni, Alpinia Sandereana and some well colored curmerias as well as a number of commoner decorative plants. John Marshall was second in this class and Colin Robertson third. Mr. Robertson was, as usual, a heavy winner in nearly all the classes for specimen palms. James Robertson, gardener for Mrs. T. O. Richardson, was first in the class for specimen cypas

Prize Table Decoration by Miss Edith Wetmore, Daughter of Senator Wetmore, at Newport (R. I.) Show

with a splendid specimen in the finest condition imaginable.

In the class for specimen fern, John Mahan, gardener for Mr. H. D. Auchincloss, was first with an immense specimen *Nephrolepis bostoniensis*. James Boyd was second with *N. Whitemani* and Colin Robertson third, with *N. elegantissima*. Oscar Schultz took first for a group of ferns. Bruce Butterton, gardener for Mr. E. J. Berwind, second. Mr. Butterton was first in the class for six ferns. John Marshall first for made-up baskets of foliage plants, James Boyd second and James Robertson third.

Hugh Williamson won in the class for a miniature flower garden; his son, James, was second with a reproduction in miniature of the garden at the residence of Mr. E. C. Knight on Bellevue avenue.

At the Autumn shows of this society, cut flowers of roses, carnations and gardenias have usually been meagerly exhibited because of the drain on the supply, but this year they were more numerous and of better quality than usual. James Boyd was first for gardenias; Colin Robertson first and James Boyd, second for carnations. J. M. Marshall took first on American Beauty roses; he was also first in class for hybrid tea or tea roses. John Mahan won out in the class for herbaceous blooms with a superb collection; Joseph Gibson was second and Alex. Adam, gardener for Mr. A. G. Vanderbilt, third.

Baskets and center-pieces were shown on the second day and they made quite an attractive display. Gibson Brothers, florists, were first; Oscar Schultz, second, and John Marshall, third. For a fancy basket of dahlias, Mr. Schultz was first, with a very handsome creation of Katherine Duer dahlias and red ribbon; Gibson Brothers, second and John Marshall, third. James Boyd took first for a fancy basket of other flowers with American Beauty; John Marshall, second, with allamandas; and Gibson Brothers, third, with gardenias.

Dahlias held up their end well at this show; there was the keenest kind of competition in nearly all of the eighteen regular classes. Out of town commercial growers showed up in great force. W. W. Rawson & Co., of Boston, staged about 150 varieties for exhibition only; among this collection were many striking novelties of all types. Maurice Fuld was in charge of this exhibit. Among the other growers from out of town were: H. F. Burt, Taunton; Mrs. H. A. Jahn, W. D. Hathaway, Wm. F. Turner and Wm. H. Richardson of New Bedford; Arthur B. Wordell of Westport; The Star Dahlia Gardens, Providence, R. I.

In the class for commercial growers Sisson & Thurston of this city were first; W. D. Hathaway, second and H. F. Burt, third. Arthur B. Wordell took several firsts in the Dahlia classes. James Robertson of this city was, however, the largest winner all through. Mrs. Jahn was also first in three classes. Edwin S. Manuel of Newport put up a splendid collection of dahlias of all types for exhibition only, for which he was awarded a gratuity of \$10. W. D. Richardson of New Bedford captured the society's silver medal for the best seedling Dahlia, and James Robertson the society's prize for a collection of seedling dahlias.

A. H. Wingett, Lenox, Mass., exhibited his new yellow seedling decorative Dahlia, Charles Lanier, for which he was awarded a first class certificate of merit. This is a good Dahlia in every respect and well worthy of the favorable comment passed upon it here and elsewhere.

Single, pompon and show dahlias were exhibited in greater numbers and

of much better quality than at previous shows, the commercial growers being especially partial to these types. Decorative dahlias were also very much more in evidence than heretofore.

The table decorations on the third day brought out the society ladies in great force. Miss Wetmore was first for a table decoration for prize offered by Miss Keteltas and Mrs. De Lancey Kane, second. John Marshall won the Berwind prize; Oscar Schultz took first; Mrs. Robert Goelet, second, and Hon. Perry Belmont third for the society's prizes for table decorations.

Henry A. Dreer exhibited water lilies, ferns and caladiums; the plants of *Nephrolepis todæoides* and *N. Amerpohlii* in this firm's exhibit received much attention; and while the former variety was generally commented upon as being one of the most decorative of the type, the latter was the favorite with the florists in attendance at the show.

W. A. Manda, South Orange, N. J., had an exhibit of miscellaneous plants including *Dracaena Mandaiana*, which was greatly admired; it was awarded a first class certificate of merit. Other good dracaenas in this exhibit were Black Beauty and Bronze Beauty. Conspicuous also in the Manda exhibit were several plants of variegated privet, a thing not common here, but will be later on considering the inquiries made concerning it, by florists and gardeners.

John Lewis Childs, Floral Park, N. Y., exhibited a large number of varieties of gladioli, for which he was awarded a certificate of merit. B. Hammond Tracy of Wenham, Mass., staged the largest collection of gladioli ever seen here, which included many of the best varieties in cultivation as well as several good seedlings of his own raising. The society's silver medal was awarded this exhibit.

R. & J. Farquhar & Company, Boston, staged several large vases of *Lilium auratum* and *L. superbum* of splendid development, for which they were awarded a certificate of merit.

The F. E. Conine Nursery Company of Stratford, Conn., made a very creditable display of tea and hybrid tea roses, which was awarded a certificate of merit.

A most gratifying feature of this show was the interest taken in it by the public, as was substantially proved by the returns from the sale of admission tickets which amounted to more than double that of the two previous shows.

At the society's dinner on the first day of the exhibition all the visitors were entertained; these included, John S. Hay, John Beaton, James Morton, James Garthley, A. B. Wordell, H. A. Jahn, W. D. Hathaway, F. R. Medbury, H. F. Burt, and A. F. Price.

D. M.

Part of Gladiolus Exhibit of B. Hammond Tracy, with Display of W. A. Manda, including *Dracaena Mandaiana*, in Foreground (Newport R. I.) Show

Fruit and Vegetable Show.

The annual exhibition of fruits and vegetables of the Massachusetts Horticultural Society will take place at Horticultural Hall, 300 Massachusetts avenue, Boston, Thursday and Friday, October 10 and 11. This is the only exhibition of the society which is devoted exclusively to the fruit and vegetable interests, and it is intended that it shall represent the products of New England in these lines. It is expected that every one of the New England states will contribute specimens of its fruits and vegetables which, with the displays of our local growers, will make a grand Autumn festival.

The sum of \$500 is to be awarded in prizes for fruits, and \$300 for vegetables.

Special interest centers in the classes for collections of apples, pears and grapes, and in the decorative collections of vegetables, for which large prizes are offered, and the competition in these is expected to be keen.

The exhibition, which will be free to all, will be open Thursday, October 10, from 12 m. to 6 p. m., and Friday, October 11, from 10 a. m. to 6 p. m.

WM. F. RICH, Secretary.

LENEX, MASS.—Among the special prizes to be competed for at the chrysanthemum exhibition of the Lenox Horticultural Society, to be held in the Town Hall on October 23 and 24, 1907, are the following: By Lager & Hurrell, Summit, N. J., \$50, and Julius Roehrs Company, Rutherford, N. J., \$15, for orchids; A. T. Boddington Company, New York, \$25 for 24 blooms distinct varieties, cut chrysanthemums; Charles H. Totty, Madison, N. J., \$18 for six blooms of chrysanthemum Helen Clay Frick; R. & J. Farquhar & Company, Boston, Mass., silver cup, for vase of 24 blooms of chrysanthemums; Lord & Burnham Company, New York, gold medal and prizes amounting to \$24, for six vases in six distinct varieties chrysanthemums, three blooms of each. Special prizes are also offered by A. N. Pierson, Cromwell, Conn.; Peter Henderson & Company and Vaughan's Seed Store, New York City.

Providence, R. I.

News of the Week.

The S. J. Reuter & Son Company, Westerly, R. I., has been incorporated for the purpose of carrying on the business of growing and selling plants, fruit trees, shrubbery, vegetables and other agricultural products and buying horses, cattle and sheep. The company will have a capital of \$150,000. The incorporators named are Simon J. Reuter, Louis J. Reuter, Barbara A. Reuter. The S. J. Reuter greenhouse concern is one of the largest in this State and Mr. Reuter is one of our most successful growers of carnations, chrysanthemums and roses, as well as a general supply of other commercial stock.

William Hay, rose grower, has his place in fine condition. The strong young healthy growth the rose plants are throwing up is something wonderful. Mr. Hay was away from his place for almost three months in charge of J. A. Budlong & Sons Company establishment, while they were looking up a man to take charge.

Openings in the large department stores as well as in the millinery stores were the cause of considerable business among the florists for decorative plants and flowers.

The business of the late Thos. J. Johnston, who died so suddenly about eight weeks ago, will be continued by his widow, who is very conversant with it. She has retained the same corps of clerks formerly employed by Mr. Johnston.

A. M. Rennie, who was to take charge of Vaughan's Seed Store in New York, and who was taken so suddenly and dangerously ill last week, being operated on at the Rhode Island hospital, is reported improving. His many friends hereabout are very much pleased to hear such good accounts of his condition.

John Pitchett, formerly with Wm. H. Elliott, has taken charge of J. A. Budlong & Sons Company's place at Auburn, R. I.

Henry Boet, formerly with Michael Sweeney, has taken charge of the Butler Hospital greenhouses and domains.

Charles Johnston, with E. J. Johnston, has returned from a month's sojourn in the Adirondacks much improved in health.

S. S. Skidelsky was in town during the past week. GEO. A. JOHNSTON.

Detroit.

News Notes.

Slight frosts and heavy rains have killed all outdoor stock in this neighborhood. Carnations are few in number, and the heavy crop of roses is getting smaller. A few chrysanthemums are expected this week, but the real cut will not begin before another 10 days.

Some growers like Jas. Taylor of Mt. Clemens, claim a later cropping of carnations, because of a general setback to the plants in the field last Spring.

John Breitmeyer's Sons made a great showing with a window decoration composed of wild purple asters and wild boltonia; this proved so effective that it was used as a casket cover with the addition of lily of the valley and maidenhair fern. Another proof of the not enough recognized fact, that no expense account brings better returns than a good window display.

The Florists' Club furnished the judges for the children's flower exhibit in ten local schools, and to assist this movement still more gave two Boston ferns to each school to be used as prizes. Messrs. Brown, Ponchillon, Scribner, Schroeter, Sullivan and Taepke acted as judges. The flowers displayed by the children were generally very good, consisting mostly of asters, dahlias, gladioli, etc. The Michigan Cut Flower Exchange is putting ferns in cold storage by the million.

F. DANZER.

COLD OR WARM WATER.—It is the generally accepted opinion of florists and gardeners that watering plants with very cold water is detrimental to growth, but no one has undertaken to state definitely how cold the water may be without producing this result. It is common opinion, however, that water applied to greenhouse plants should not be much colder than the air immediately about them. After a series of experiments the Wisconsin Experiment Station has arrived at the conclusion, from the results of the greenhouse work, that for vegetables and flowering plants commonly grown under glass, well or spring water may be freely used at any time of the year without warming.

PORTLAND, ME.—Miss Marlon E. McGonigle, florist, was the victim of a till robber recently to the tune of \$35. He is still at large.

I have the following

Carnation Plants

to offer

	100	1000.
1500 White Perfection	\$6.00	\$50.00
1500 Robert Craig	5.00	40.00

Cultural Directions

Are leaflets written by practical men especially for the use of amateur customers.

If you have a counter trade, either in plants, seeds, flowers or bulbs, you should have a supply of these leaflets on hand to present to your customers when they seek cultural information about their purchases.

(The leaflets embrace over forty subjects.)

We can supply them at \$2.50 per 1000, or 500 for \$1.50, and can make a reduction of those prices on large quantities.

At a small extra cost we can put your imprint on each leaflet.

Try a thousand and see what a help they are in selling goods.

The following "Culturals" are particularly seasonable for your customers at the present time:

Chrysanthemums, Dahlias, Hyacinths, Lawns, Lily Culture, Tulips, Freesia, Vegetables.

See adv., page 423 last week's issue.

Hart's Handy Handle

Given Highest Award at the S. A. F.
Convention, Philadelphia, Aug., 1907

New! Necessary! Novel!

PATENT GRANTED

Hart's Handy Handle

is an arrangement for converting pots of ornamental or flowering plants into baskets with handles. The handle is instantly adjusted and the heavier the plant the tighter the clutch.

Opinions of Rochester Florists

GEO. B. HART.
Dear Sir:—You have something good and we do not hesitate recommending it to the trade. —
Yours sincerely, J. B. KELLER'S SONS.

GEO. B. HART.
Dear Sir:—At Easter time, with a little chiffo decoration with the handle, we were able to increase the value of plants from 50 to 100 per cent.

GEO. B. HART.
Dear Sir:—Hart's Handy Handle makes a basket out of flower pot without having to transfer the plant to a basket. We used a lot of them last Easter on azaleas and other blooming plants, and decorated the pots and handles, and the effect was the same as a basket, and sold well, as the expense was much less than using baskets, and the effect was just as good. They are good any time of year and, unlike baskets, they don't get shopworn. Yours truly, SALTER BROS., Florists

METROPOLITAN MATERIAL CO.

Greenhouse Wreckers

1398-1408 Metropolitan Avenue, BROOKLYN, N. Y.

Please find enclosed \$1.00 for The Florists' Exchange. I failed to send my last subscription and you discontinued sending the paper after the time it was paid for. You did perfectly right about the matter, and I don't think I will try to get along without it again as long as I keep a greenhouse. With best wishes, I am

Yours respectfully,
A. P. MCINTURFF.
Stroudsburg, Va.

GROW MUSHROOMS

If you do not know how, procure that simple but complete and practical book called "How to Grow Mushrooms." The price is ten cents and it can be secured from this office. Special rates will be made to the trade who wish to supply their customers.

Philadelphia.

Club News.

This week all interest was centered in the Florists' Club meeting, there being two candidates for three offices. Much electioneering was done, and the result was probably the largest attendance ever seen at any of our meetings. There were 108 ballots cast in the election which resulted as follows: President, Fred. Hahman; vice-president, William Graham; secretary, David Rust; J. W. Colless, the treasurer, declined re-nomination and George Craig was appointed treasurer pro tem. and then nominated for the office; there being no other nominee he will be elected at the next meeting.

W. E. McKissick read a very good paper pertaining to the commission business from the middle man's standpoint; this will appear in our next issue.

William Kleinheinz, gardener to Mr. P. A. B. Widener, staged a vase of mixed varieties of carnations; all were good flowers on long stems. They were in fact the best carnations ever seen here at this time of year, and were exhibited to further demonstrate the advantage of pot-grown versus field-grown plants. The flowers shown were produced from plants grown as follows: Cuttings taken December 15 to January 15, potted into thumb pots, then into 3-inch, then into 4-inch pots, planted inside on benches July 15, the plants never being allowed to get pot-bound. Don't pinch back hard when planted inside.

Robert Scott & Son had a vase of flowers of their new rose, Mrs. Jardine, a hybrid tea raised by Alexander Dickson & Sons, Newtonards, Ireland. It is a strong, robust grower, and grows freely. It flowers much more profusely than either Bride or Bridesmaid and produces long stems. The blooms are double, of a bright rosy pink shading in the outer petals to salmon pink. It is fragrant and retains its color perfect throughout the Winter months, when other varieties usually go off color. This rose has been greatly admired and a bright future for it is predicted; it, in fact, looks as if this introduction will outclass both Liberty and Killarney which this firm also introduced.

Fred. Rafferty, seedsman and florist of Santa Ana, Cal., was a visitor here this week.

DAVID RUST.

Washington, D. C.

Weather and Trade Conditions.

The Fall equinoctial period delayed the expected improvement in business during the past week; temperature ranged from the eighties down to very near freezing, and frost was only averted by light winds. Torrential rains have also fallen, doing damage to the outside crops, and putting an end to the late asters. There has been a marked change of color in foliage which has taken on its Fall hues to some extent.

The country people continue to overstock the market with dahlias, which they dispose of for any price obtainable; by reason of this, the growers are suffering a loss. Some violets of good quality for this season are coming in, but there is a slow demand for all classes of flowers.

John M. Allen of Georgetown, is having great success with his Pieris and Boston ferns; he procured soil removed by the Rosslyn Brick Company in order to reach the underlying clay, and mixed this with well decomposed cow manure. Mr. Allen claims this soil not only grows the best ferns he has ever raised, but hold the moisture in a very satisfactory manner.

Some of the earlier varieties of chrysanthemums are expected in this week from local growers. J. L. C.

Club Notes.

Being more accessible to the general public, the Washington Florists' Club held its October meeting in connection with the dahlia exhibition, at 1007 G. street, where on the night of the 1st the spacious floor was pretty well filled with dahlias. W. R. Gray, Oakton, Va., exhibited quite an interesting collection of the newer, as well as older sorts and of the better type in singles and doubles. Gigantea, Souv. de Gustave Douzon, Perle d'Or, Electus, Mrs. Jones, and

H. N. Sellin, were probably the favorites. Mr. Gray's business has so greatly increased that he has added a packing house, 25 by 60 feet, two stories high, in which his mail orders, etc., are arranged for shipment. R. Vincent, Jr. & Sons Company, White Marsh, Md., also displayed a long table of dahlias embracing many pleasing colors of all types. Henry A. Dreer had on exhibition a few of each of the newer varieties, including Queen Wilhelmina, Reliable, etc. Dr. W. W. Evans, of Ivansdale Farm, Va., displayed a very choice collection of cactus dahlias, comprising some beautiful colors and forms.

A committee consisting of George H. Cooke, chairman, William F. Gude, and J. R. Freeman was appointed to investigate further the movement on the part of the police department to stop persons from ornamenting the sidewalks with bay trees, etc.

Charles Henlock, superintendent of the Propagating Gardens, very ably discussed the necessity of the awards committee trying to avoid passing upon new creations more than once, as in the case of synonyms, it seems that several persons have gotten exactly the same results from hybridizing, and each under a different name had endeavored to gain recognition before various awards committees. Mr. Henlock referred particularly to the class of plants such as dahlias from which such results would more readily occur. Reports of the judges who passed upon the exhibit will be made known at the next meeting night of the club, November 5.

President Bisset, with his children, is enjoying a trip to the Jamestown Exposition.

JAS. L. CARBERY.

Indianapolis.

A Dahlia Display.

The first large exhibit of dahlias ever made in Indiana was offered by Bertermann Brothers Company last week. E. T. Barnes, of Spencer, Ind., had on exhibition over four hundred varieties, some fifty of them being seedlings not shown before. About seven thousand flowers from different sources composed the exhibit. Some of the blooms measured eight inches. Those staged with 4-foot stems, in large vases, made a gorgeous display. Upon a mossed arrangement in the center of the store were placed the several varieties plainly labeled for public inspection. Among the dahlias most in prominence and favor were Sylvia, Gettysburg, Mrs. Theodore Roosevelt, Cuban Giant, Yellow Belgian and Souvenir de Gustave Douzon. The background of the window was a carpet, constructed of short-stemmed dahlias bearing the words "Dahlia Show" made of the same flower.

Not the least interesting part of the exhibit was the fine showing of new roses by the E. G. Hill Company, Richmond. The public's comments upon Rhea Reid bode well for that magnificent flower. Praises of all kinds were fairly showered upon it, some remarking that in it American Beauty had a formidable rival. Two other new roses of promise, Princess and No. 30, a light pink, also elicited favorable comments.

D. L. Klepper, Galveston; Thomas L. Knipe, Kokomo; J. L. Frazier, Georgetown; John S. Leach, Hartford City; and Wilbur Byers of Franklin, Ind., were among the visitors. I. B.

GRAND RAPIDS, MICH.—William S. Taylor, who for the last 14 years has had a florist stand in the Morton House, died September 23, at his home, 122 Winter street. Mr. Taylor was 47 years old, and had been confined to his bed for ten weeks. He was born in Monroe, Mich., but came here in 1858. He was unmarried and is survived by a brother and three sisters. He was a member of Daisy lodge, No. 48, B. P. O. E.

COLUMBUS, GA.—On September 25 a large tank at the East Highlands Nurseries collapsed, falling to the ground, a distance of 80 feet, and breaking into fragments. It was full of water, and the flood swept everything before it in its path as it struck the earth. A brick wall that was directly in front of the great volume of water was torn down, and some of the bricks were carried 50 or 60 yards. The tank was only a few years old, and the collapse of its supports, which were braced with iron, was a great surprise. The property damage was about \$1,000. No one was injured.

ASPARAGUS, BOSTONS, AZALEAS, ARAUCARIAS, 'MUMS

J. W. DUNFORD, Clayton, St. Louis Co., Mo.

Increased Express Rates for Boston Flower Traffic.

"A Florist" writes to the Boston American, as under, regarding an increased rate on cut flowers and returned empties recently put in operation by the American Express Company:

"As showing the probable temper of those in control of the New York, New Haven & Hartford toward the public when they have a monopoly, the recent action of the American Express Company, which is a corporation controlled by the same people as the New Haven, is interesting.

"A few weeks ago the American Express Company obtained sole control of the express business between South Framingham and Boston on the Boston & Albany, formerly in possession of the Adams. The result has been increased rates and much poorer service.

"For some years the florists whose greenhouses were in this territory have had a contract with the Adams Express Company for the transportation of flowers between the various stations on this line and Boston. This is a daily service, and the express company received the boxes at the car, carried them to Boston and thence by team to the various wholesale flower markets. The rate was forty cents per hundred pounds, with free return of empty boxes, no single box to be carried for less than fifteen cents.

"By a new rate, in force September 15, the American charges as follows:

"Box weighing less than 10 pounds, 15 cents.

"Box weighing from 10 to 20 pounds, 20 cents.

"Box weighing from 20 to 30 pounds, 25 cents.

"Return of empties, 10 cents each.

"As the express car is not provided with scales, and as boxes are prepaid, the matter of weight is estimated by the express messenger. This morning I shipped one box only, weighing nine pounds. The charge was twenty-five cents, or nearly \$3 per hundred pounds, quite an advance over the former cost of forty cents per hundred pounds, and now I must pay an additional charge of ten cents for return of box.

"Doesn't this come pretty near robbery? And would not the same people do precisely the same thing if they had entire control of the freight business of New England by the proposed merger?

"In comparison with above rates, I am told that a large snipper of flowers from Rhode Island pays only ten cents per hundred pounds for the same service."

CHANGES IN BUSINESS.

ANDOVER, MASS.—J. H. Playdon has opened a flower store here in the Arco Building.

BERLIN, CONN.—A. A. Welden has leased his floral establishment to Hillier & Company, of New Haven, for a period of five years.

ALAMEDA, CAL.—The store formerly occupied by H. Gresens, 1251 Park street, is now run by G. Vandenaabeele and R. Petrie under the name of the Alameda Floral Company. They report a very good business.

NEVADA, MO.—J. W. Primmer has bought the Iola Greenhouse on East Lincoln street, Iola, Kansas, and has had a force of men all Summer repairing and building new and up-to-date houses and now has them filled with carnation and rose plants for cut flowers.

SHILLINGTON, PA.—The Deeds Floral Company has been incorporated. The company is capitalized at \$5,000, divided into 500 shares of \$10 each, held as follows: Luke M. Deeds, 249; Ella M. Deeds, 1, and A. J. Fink, Jr., 250. The firm will take over the business now conducted by Mr. Deeds. Four new greenhouses are to be built. The concern will raise flowers and vegetables.

AZALEAS. Vars. S. Mardner, Deutsche Perle, Vervaenenaa, Van der Cruysen B. Andreas Alha, Schryveriana, Empress of India, Van Houtte.

NOVELTIES FOR 1908

HARVARD. Glowing crimson (the real Harvard color). This variety will take the place of all other crimsons as it is very free and the blooms are of the finest as to size and quality. It is a very rapid grower and the habit is ideal. Rooted Cuttings, \$12.00 per 100, \$100.00 per 1000. January Delivery.

FAUST. A brilliant scarlet. This variety will replace all of the commercial varieties of this color owing to its extreme productiveness, many plants last December having 20 buds and blooms to the plant. A fine one for the Xmas trade. Rooted Cuttings, \$6.00 per 100, \$50.00 per 1000. January Delivery.

REMEMBER WE GUARANTEE SATISFACTION.

REVIEW OF THE MARKET

NEW YORK.—The cut flower business seems a little brighter this week. The weather is more favorable, and a decided shortening up in some lines seems to have helped out quite considerably. Asters, owing no doubt to the heavy rains of last week, are very few in number, and, in the main, of very poor quality. The carnation supply has shortened up considerably, and prices for these have advanced materially. Bride and Bridesmaid roses are also much fewer in number, and better prices on all grades are resulting. American Beauty are seemingly plentiful enough for all demands, and there has been no advance in values. Chrysanthemums are coming in to quite a few places, and prices range anywhere from 10c. to 50c. each. Varieties for which the latter price is asked when the blooms are perfect, are Monrovia, Glory of the Pacific and Polly Rose.

Lilies have taken quite a turn upward, and for the best 12c. each is asked. Gladioli are not so plentiful as they were, and a fairly good demand is felt for the best varieties. Dahlias range from about \$3 per 100 down, and quite a number of these change hands each day. There is a supply of tuberose coming in, but these do not seem to be in much favor. Lily of the valley is bringing a little better price than has been possible for several weeks. Cattleyas, however, are not doing so well as they were a week ago; the supply seemingly is a little heavier than the demand just now.

Violets are a regular feature, but as yet 30c. per 100 seems to be the top price, a great many being sold as low as 15c. per 100. Gardenias are being received regularly at two or three establishments, though there is no large stock of them on hand at any time. The demand for asparagus has shown a slight improvement within the last few days. One of the scarcest things in this market just now are yellow roses, and when out-of-town orders come in for three or four dozen of these flowers, it requires a lot of hustling around to get enough to fill them.

CHICAGO.—The Fall openings, which are now very generally on, the stormy weather of the latter part of last week which pretty nearly obliterated the outdoor products, and the several dark days which tended to curtail greenhouse stock have combined to transform market conditions here at short notice, and the early part of this week showed a shortened supply, an increased demand and naturally a marked advance in prices.

The quality of greenhouse stock has steadily improved, while the comparatively small supply of outdoor flowers, principally asters, has greatly deteriorated and will soon be a thing of the past.

Chrysanthemums are now coming in in a very generous quantity, and for the first of October are remarkable for the quality. Many which reached the market should, of course, have remained some days longer on the plants, but some varieties, particularly October Frost, appear well done.

Carnations are steadily improving both as to flower and stem, and if it is true that coming events cast their shadow before it is safe to anticipate some excellent products in this line at an early date.

Roses are good for the season and Kaiserin Augusta Victoria, Bride and American Beauty have been short, yet on the whole roses have not, with the exception of some special sales, shown the general stiffening in prices that has been observed in carnations.

Violets for October 1 are good, yet the call is not heavy.

Good smilax is a little scarce, but owing to the arrival of much short stock the price remains about the same. Other greens may all be said to be selling well. W. K. W.

BOSTON.—Trade is quiet, but the season is getting nearer when activity is likely to set in at any time. In the meantime high grade flowers are not over plentiful. Asters are practically past for this season, the heavy rains of the last few days having wound up any that were left. Carnations are improving daily, and although the stems are yet short the flowers are getting much better than they have been. Roses also are improving; American Beauty are extra fine at present, as are Richmond and Killarney—two roses which are proving favorites in this market. Wellesley are good.

Chrysanthemums have made their appearance but not in any quantity yet. Violets so far have been poor, and although quite a few have been coming in the demand so far has been slight.

Gladioli are still abundant. Lily of the valley is of fine quality now. Lilies are not very plentiful. Sweet peas are scarce. There are plenty of dahlias at present although they are not as much used in this city as they might be. Candytuft is in good supply, and of good quality. Hardy cut ferns are of fine quality at present, so is Southern smilax. Asparagus and adiantums still maintain a steady demand for first-class material. J. W. D.

ST. LOUIS.—Business during the past week was not as good as the week previous. The weather had something to do with this condition, one day being warm, the next cool with rain. Saturday opened up with a cool spell, which it is hoped will stay. A few good frosts are needed to make trade steady.

The Veiled Prophets' ball, which took place Tuesday night, created a good call for American Beauty and other choice stock. This is carnival week and should make a good demand; a number of receptions and weddings take place. The market has been well supplied all week, with a fair call for all grades, especially first-class, special grade roses and carnations. Good red roses seem scarce; there are plenty of white and pink.

ST. PATRICK.

A Bad Boiler Explosion.

At six a. m. on Thursday, September 26, 1907, Pleasant Hill, Mo., and the country for miles was viciously shaken by the explosion of a boiler, one of the thirteen used at the George M. Kellogg greenhouses. The area under glass at the place is over 400,000 square feet and the havoc resulting from the giant upheaval of brick, timber and shredded boiler metal is almost indescribable. Estimates made at the plant place the damage, at the lowest at \$35,000 not taking into account the loss of plants and their produce. There is no insurance. To the early hour is due the fact that there was no loss of life, which otherwise would have been heavy.

The engine room and the battery of five boilers are a hopeless wreck, but the greater damage is to the fragile expanse of glass exposed to the hail of wreckage. Pieces of boiler metal weighing hundreds of pounds, heavy timbers, brick and stone from the building, and long and heavy pieces of steel piping were sent by the blast hurtling through the houses, accomplishing such dire havoc as rarely is seen. The wrecked battery served the rose and carnation division of the institution, and these are laid low by the hail of debris and myriad bits of broken glass.

Although standing to lose many thousands of dollars, Mr. Kellogg's first inquiry was to learn if anyone had been killed, and expressed great relief when told that not a soul had been hurt.

The boiler which caused the trouble was an eighty-inch heater with a capacity of twenty pounds of steam. It was fired on September 26, for the first time this Fall and was kept going all night. A second boiler was also under steam, but the other three were unused. It may never be determined what was the direct cause of the explosion. The fireman, who had left the room, says that his steam was gauging well within the limit, but the fact that the boiler, of quarter inch steel, was ripped as if it were so much cloth, indicates a tremendous pressure. Houses reeled and rocked with the explosion, which came with a snappish roar, and many people ran out thinking that an earthquake was on hand.

The dome of the boiler, weighing 500 pounds, was blown northward at least 600 feet and lit in an open space, thus clearing the entire expanse of the greenhouses. Another piece weighing 300 or 400 pounds, crashed through the roof of the stable, but did not hit any of the stock.

At the boiler room the 90-foot smokestack stands apparently intact, but an expert will examine it. Two boilers remain in position, but one is bent inward and apparently ruined, while the other one is seriously injured. At

this place the very foundation rocks were affected, some of them weighing perhaps 800 or 1000 pounds, being thrown out of the wall and up on the embankment. The other two boilers were also lifted clear of the wreck by the blast. The exploding boiler is completely gone ripped into shreds.

The foregoing particulars are taken

needed to the houses until the boiler room is put in repair and the larger boilers are installed. These boilers will be in readiness by the middle of next week. One carload of glass arrived September 28. The required lumber for repair work will be hard to obtain.

"Trusting in the Lord, I am still

Scenes at G. M. Kellogg's Establishment at Pleasant Hill, Mo., After Boiler Explosion, September 26, 1907.

from the account of the explosion appearing in a local paper. Mr. Kellogg adds: "The gauge had been shut off the boiler and the steam valve letting the steam out into the houses was closed tight. I have purchased two boilers that will be set temporarily and con-

hard at work and hope that cold weather will hold off for another week, after which I think I will be fairly well closed in."

We feel sure the sympathy of the trade will be extended to Mr. Kellogg in his unfortunate disaster.

Cincinnati.
The Week's News.
Business is on the boom and everything in sight is selling. The only trouble is that there is not enough stock. Carnations are very scarce; asters are about over, and dahlias are just now having their inning. Roses are getting better right along, but the growers must be very careful and not let mildew get the best of them.

George Tromey, who for eighteen years was manager at Fred Gear's has opened up a store of his own at 923 Vine street, and as he is the best buyer that goes down the line, he is sure of making a success.

C. J. Ohmer and bride will arrive home October 4; they will be received with rice, old shoes, etc.

L. F. Benson, Newport, Ky., has just finished a fine conservatory in connection with his store and now has by far the best place of the kind around Cincinnati.

Dr. Frank E. Howald of Atlanta Floral Company, Atlanta, Ga., writes me that his wife and self have just returned from a trip abroad, having visited Plymouth and London, England, and Basle, Switzerland, where they stayed six weeks; then went to Germany and Italy, and returned home by way of Paris and Cherbourg, France. He states they enjoyed the trip immensely. E. G. G.

Prices Advertised in these Columns are for THE TRADE ONLY—When Writing Please Mention THE FLORISTS' EXCHANGE.

ROSE and CARNATION blooms our specialty. 100,000 plants to cut from. Also rooted cuttings of carnations. All latest varieties. Orders promptly attended to.
THE WORCESTER CONSERVATORIES
WORCESTER, MASS.

Baltimore.

Visiting the Jamestown Exposition.

On September 23 a delegation of Baltimore florists started for the Jamestown (Va.) Exposition to attend the several meetings of the Congress of Horticulture and the Maryland Horticultural Society. After a rather rough and tempestuous boat ride on the Chesapeake Bay the party, consisting of about 20, with their ladies, arrived during a storm at Old Point Comfort. After some delay we were safely landed at the Inside Inn, the headquarters of the various societies. At the Exposition grounds we found the congress in session, presided over by Warren H. Manning. All the meetings of the various societies were well attended and the business transacted was both instructive and interesting.

Several of the florists visited Richmond, and inspected the extensive establishment of Mann & Brown which is beautifully situated alongside of Reservoir Park. Mr. Brown showed our correspondent through the place which contains nearly 4 acres under glass, with an extensive nursery to which have recently been added over 10 acres. Everything was found in a healthy and thrifty condition; not a speck of mildew or any other disease could be detected. Thousands of violet plants one foot in diameter were seen. This firm grows over 10,000 violet plants of several varieties and over 20,000 roses, (American Beauty, Bridesmaid, Kaiserin Augusta Victoria and Richmond). The chrysanthemums and carnations were also very fine. Soil conditions are exceptionally good in this locality; a rich dark porous and humus soil together with the minutest attention to ventilating and watering is the secret of the firm's success. Mr. Brown states that no artificial or chemical acid fertilizers are used on his place; all his fertilizers are pure cow manure, pure ground bone (with soot whenever needed).

Mrs. Perry, wife of J. J. Perry, has undergone an operation for appendicitis; she is reported as being in a rather critical condition. C. L. S.

SALEM, MASS.—The addition which Henry T. Conant & Company are making to their establishment, 133 1-2 Essex street, will provide a large and airy office and light show and salesroom. The firm has increased its business considerably within the last two years and counts among its customers many of the residents of the North shore as well as people of Salem and vicinity. The business was started a few years ago by Mr. Conant and Thomas W. Head. The partnership lasted about a year and then Mr. Conant bought Mr. Head's share and has since conducted the place. Mr. Head is at present superintendent of the large estate of Mr. Morton F. Plant in Connecticut.

COUNCIL BLUFFS, IA.—W. Speth has severed his connection with the retail store of J. F. Wilcox, and expects soon to go to Denver, where he will open a floral establishment. He has been with the Wilcox establishment for several years and has won favorable comment on his tasteful window decorations and his design work. He will remain at the Wilcox store until his successor, Howard Morgan, of Springfield, Ill., arrives. Mr. Morgan is a son of C. A. Morgan of this city, and was formerly an employee in the Wilcox establishment.

PEKIN, ILL.—George A. Kuhl has sold his brick building, located on Court street, to Henry Schnellbacher for \$9,000. He will close out his grocery store and confine himself to the florist business.

LADY GARDENER WHO WEARS TROUSERS.—In a Norfolk village there lives a lady gardener who for over a year has adopted male attire. The garden she manages extends over many acres, and she has several male assistants. She found that skirts hampered her movements when gardening, and so took to wearing "breeks."—Gardening World.

American Institute Dahlia Show.

At the dahlia and general flower
show of the American Institute,
which was held last week in the
Berkeley Lyceum, among the winners
of first prizes were Julius Roehrs
Company, Rutherford, N. J., for deco-
rative plants and orchids; W. P. Loth-
rop, East Bridgewater, Mass., dahlias;
H. F. Burk, Taunton, Mass., dahlias;
J. T. Lovett, Little Silver N. J., dah-
lias; F. R. Pierson Co., Tarrytown,
N. Y., American Beauty roses and car-
nations; L. M. Noe, Madison, N. J.,
Richmond, Bride and Bridesmaid
roses; Mrs. H. A. Jahn, New Bedford,
Mass., dahlias; J. P. Sorenson, White
Plains, N. Y., specimen plant of
Phoenix rupicola; George Hale, Red
Bank, N. J., dahlias; W. J. Hill, Jr.,
Scarborough, N. Y., dahlias; J. L.
Childs, Floral Park, N. Y., gladiolus
and George Burchett, Little Falls,
N. Y., gladiolus. The Long Island
Railroad Company made quite an ex-
tensive exhibit of vegetables, all of
which were near the acme of perfec-
tion, and demonstrated quite clearly
what can be done by intelligent cul-
tivation and a virgin soil. The vege-
tables were grown on what are termed
"experiment farms," operated by the
railroad mentioned, and located at
Medford and Wading River. These
experiment farms have evidently
been established with a view to pro-
ving what can be done in the way of
vegetable and fruit raising in this part
of Long Island, and which, by the way,
is rather sparsely settled as yet. Long
Island has always been known as be-
ing particularly suitable for a great
many crops, and the vegetables as ex-
hibited here proved conclusively that
the sections where the experiment
farms are located are just as well
adapted for vegetable and fruit rais-
ing as are any other sections of the
island. The exhibition was fairly well
attended. W. C. Rickards of Rickards
Brothers was manager, and the judges
were Mr. Rickards, J. P. Sorenson,
W. T. Hill and James Scott.

News Notes.

Oakes Ames of North Easton,
Mass., well known as a student of the
Orchidaceae, has presented his valu-
able collection of living orchids to the
New York Botanical Garden. This
collection is the result of many years'
work. It contains many valuable
plants, some of great rarity, and is
a valuable addition to the orchid col-
lection of the Garden.

The annual chrysanthemum show of
the American Institute will be held on
November 6, 7 and 8, and, in conjunc-
tion with that exhibition, the Chrys-
anthemum Society of America will hold
its annual show.

Thomas P. Christensen, who was
formerly a member of the firm of An-
derson & Christensen, wholesale fern
growers, Short Hills, N. J., the part-
nership of which was dissolved last
January, has commenced business for
himself with greenhouses at Short
Hills, and is making a specialty of
ferns for the trade.

A petition in bankruptcy has been
filed against J. M. Hodgson, florist of
718 Fifth Avenue and Newport, R. I.,
by A. J. Guttman, a creditor for \$530
on two protested notes. The attorney
of the corporation says that the fail-

THE BEST WAY

to collect an account is to place it with the

National Florists' Board of Trade

56 Pine St., New York

WHY? Because many debtors will pay
the Board fearing otherwise a bad rating in
our Credit List. Full information as to
methods and rates given on application.

ure was due to continued poor busi-
ness and lack of capital. The liabilities
are \$10,000 and assets \$5,000. The
firm of J. M. Hodgson & Company is
one of long standing in the city, and
many in the trade will regret to hear
of the end of this once prominent
floral establishment. Judge Adams of
the United States District Court has
appointed William F. Upson receiver,
and the sheriff and marshals were re-
strained from disposing of the assets.

Theodore Lang, who for many years
has conducted a retail business at
Sixth Avenue, between Thirty-eighth
and Thirty-ninth streets, has been suc-
ceeded by Duval & Fickett.

His many friends in the trade will
be sorry to learn of the illness of W. F.
Sheridan, the popular wholesale flor-
ist, who is suffering from an attack
of appendicitis.

John Birnie, West Hoboken, N. J.,
has just completed the housing of his
carnations, and remarks that the
plants are not up to the usual stan-
dard. Mr. Birnie has been ill for two
weeks, suffering from blood poisoning
in his right hand, but is now recover-
ing. This, no doubt, explains why
John has not entered into the "oat-
meal horticulturist" controversy that
has been going on in these columns.

The F. O. Pierce Company, manufac-
turers of the well-known glazing ma-
terial, Mastica, are nicely located in
their new offices at 12 West Broadway.

Benjamin Hammond, secretary of
the American Rose Society, is enjoy-
ing a tour in Canada.

The store building in which Le Mout,
the Bowery florist, has been located
for so many years, has been acquired
by the city for improvement purposes,
and Mr. Le Mout is now occupying
temporary headquarters in a building
located on the Bowery and directly
opposite the approach to the Williams-
burg bridge.

H. H. Berger & Company, 70 War-
ren street, in addition to the immense
line of bulbs they are handling, have
received a quantity of 1907 crop Ken-
tia Belmoreana and K. Forsteriana
seeds. The firm is quite pleased with
its new location; the offices and ware-
houses are most suitably adapted for
the business, and being located on the
first floor of the building, are quite
convenient to the concern's many cus-
tomers.

H. C. Irish, superintendent of the
Missouri Botanical Garden, St. Louis,
was a visitor on his way home from
the Congress of Horticulture held at
Jamestown, Va., last week.

J. H. Small, Sr., founder of the well
known retail house of J. H. Small &
Sons, Washington and New York, is
seriously ill at his home in Washing-
ton, and as he has been an invalid for
several years, little hope is entertain-
ed of his recovery.

Alfred Bunyard of the Rosary has
been spending a vacation in the Adir-
ondack mountains, and at Niagara

ORANGE, N. J.—Observing the 86th
birthday of Charles Read, one of the
veterans in Orange business life, a party
of business men of that city on the eve-
ning of September 23 tendered him a re-
ception at his home in Chapel street,
Orange. Mr. Read was born in Lewes,
Sussex County, England, on September
25, 1821, is in good health and vigor,
and took a prominent part in the cele-
bration mentioned. Many testimonials
of affection and esteem were presented
the guest of honor by his relatives and
the host of friends who called during
the evening to extend their best wishes
for many happy returns of the day.

Mr. Read, who is the son of Henry
Read, a native of Lewes, was one of
the pioneer florists in the Oranges. Mr.
Read was only 11 years old when he
started out to make his way in the
world. He apprenticed himself to the
Lord of the Manor of Lewes, William
Varrel, receiving in addition to his
board two suits of clothing with a shil-
ling given optionally on holidays. After
six years he became a journeyman, and
in 1859 he embarked on the ship Indem-
nian for this country. The ship got
afire while on its way to America and
had to be towed back. Mr. Read put
out in the ship James Foster, Jr., later
and arrived in New York March 17,
1860.

New Orleans, La.

News Notes.

Charles Eble took possession of his handsome new store on September 25. Although not a large store it is a perfect model with its furnishings of white marble and mahogany. A magnificent McCrea ice-box, was made expressly by this well-known firm to fit the store. A border of incandescent lights near the ceiling gives an abundance of light. A novelty of this store is that the walls are of glass, so that persons entering or leaving the main vestibule of the building and those in the adjoining store from Canal street have a full view of the attractive interior with its arrangement of plants and cut flowers. On the opening day the window was decorated with smilax, American Beauty roses and lily of the valley, of which Mr. Eble forced several thousand for the occasion. Mr. Eble still keeps his temporary quarters, a large room which he will use as a storeroom and workroom. He is assisted in the management of his business by his two sons, Charles, Jr. and Bernard, and his niece, Miss Carrie Eble. Mr. Eble has been kept busy since the opening, receiving the compliments of his friends and patrons, and there is no doubt such enterprise will reap its due reward.

F. A. Davis, the Mobile rose grower, was in New Orleans the past week.

Henry Cook, vice-president of the Horticultural Society, is receiving congratulations on the addition of another young florist to his family. The writer had the pleasure of seeing some nice plants of Nephrolepis Amerpohli at the Cook establishment.

Rob Reineicke has a Boston fern which has sported in rather a new direction; the tips of the pinnae are forked, similar to those of *N. davalloides furcans* and in addition the ends of the fronds are tasselled in a very pretty manner. CRESCENT CITY.

Milwaukee.

Trade Notes.

The opening of the florists' season is now at hand, and while trade is still light and unsettled the increased demand is just about cleaning up what stock comes in.

The Summer season was very unfavorable and considerable loss was sustained by growers who had planted on low ground. Frequent heavy rains and unusually cool nights retarded the plants and many growers of carnations were compelled to buy stock to replace their own which was lost. Asters moved well during July and August, but during September there was a continuous glut on the market. In the main the quality was inferior.

There is some increase in glass, which will be mostly devoted to carnations.

The supply of violets and roses will be about the same as last year, but the planting of chrysanthemums is increased about 50 per cent.

Our first frost is reported on September 22, and cold weather prevailed the entire week following. All tender outdoor plants were cut down, but plants of a hardier nature were not affected.

The C. C. Pollworth Company is now busily engaged tearing down its old plant houses. This range when built was known as the Deuster Greenhouses and attracted considerable attention at that time among the leading growers on account of its construction being short span to the south. The houses were erected 15 years ago 21 x 100-foot houses. The Pollworth Company absorbed the plant later and for the past eight years has used them for the growing of palms, ferns, and miscellaneous plants. This firm has erected this Summer three large modern houses to replace the old ones, and has consolidated them with the rose houses, thus putting the entire range under one system.

Alex. Klokner, the Wauwatosa florist, has also embarked in the real estate business.

Herman Staeps and daughter have returned from a European trip, visiting in Germany, France and Italy.

Gus. Kellner seems to have the monopoly as a decorator in this city; he had the decorations of all the principal stores for their Fall openings and was kept exceedingly busy. INCOG.

THE FLORISTS' EXCHANGE

THE Cultural Leaflets treating on BULBS are especially season-
able at this time.

Seedsmen and Florists who sell BULBS at retail should procure a supply of these LEAFLETS, and present one to each customer. Do this, and each purchaser will be enabled to grow the BULBS intelligently; in this way you make a satisfied customer, a result always to be desired.

CULTURAL DIRECTIONS

Specially written for the use of your amateur customers. Send Twenty-five cents for complete sample set, which amount will be deducted from order for first thousand.

The universal favor in which these Directions are held, as shown by the many orders received therefor, encourages us in the belief that these Leaflets are just the neat little factor to help promote business and establish better relations between the dealer and his customer.

TRY SOME!

BIG BUSINESS ASSISTANT

TO SAVE TIME, QUICKEN SALES, AND AID YOU
PLEASE YOUR CUSTOMER, WE HAVE PREPARED

Cultural Directions

COVERING A NUMBER OF THOSE PLANTS
AND BULBS MOST LARGELY IN DEMAND

THE "CULTURALS" have been written by experts; they are fuller, and contain more detailed directions than it is possible to embrace in a catalogue. Equipped with these, just hand one out with each sale, and save yourself considerable present and future trouble, as the customer will then be able to consult the directions, grow his plants, seeds or bulbs intelligently, and so receive satisfactory results, without having to continually resort to you for advice.

The following "Culturals" are now ready:

Seed Trade Report.

AMERICAN SEED TRADE ASSOCIATION

George S. Green, Chicago, Ill., president; M. H. Duryea, New York, first vice-president; F. W. Bolgiano, Washington, D. C., second vice-president; C. E. Kendel, Cleveland, O., secretary and treasurer; Leonard H. Vaughan, Chicago, assistant secretary.

It is reported that recent rains have almost ruined the bean crop of Greenville, Mich., and extensive rot has resulted.

PORT HURON, MICH.—The old canning factory is again a scene of activity, a company of business men of this city having opened a seed packing plant. The factory is located in the midst of the best farming land in the county and already many large shipments of seeds have been made to the West.

SUNNYSIDE, WASH.—F. K. Spalding, president of the Sunnyside Nursery Company, went to Chicago recently to endeavor to contract for garden seeds to be grown here. If satisfactory terms can be made the growing of seeds may become an important industry in this section. The soil seems to be well adapted therefor.

ONIONS FOR SEED.—One hundred acres of onions were grown this year in the Greeley, Colorado, district for a California seed firm and will be replanted in California next year for seed, says the Market Growers' Journal. Owing to the prevalence of plant lice the seed onions made only about half a crop and where one hundred cars had been anticipated only fifty cars grew.

THE RECENT SWEET PEA VOTE.—Some little time since, a party of growers were visiting some trial grounds in America, and it is surprising to note how they voted when seeking out the best sorts. Frank Dolby got 38, Nora Unwin 32, Queen Alexandra 30, George Herbert 28, Miss Willmott 28, Apple Blossom 26, Flora Norton 22, Mrs. A. Watkins 22, White Wonder 20, Zoe 20, Shasta 18, Admiration 18.

The votes were given by florists and market growers, but nevertheless I do not think the selection a good one. Some of the sorts are undoubtedly tip-top, but who on this side would plump for Flora Norton, White Wonder, Admiration, Apple Blossom, to mention just a few.

Seeing that such high-class sorts as George Herbert, etc., are mentioned, I take it that that votes were given on all points, not merely for free-flowering only. Therefore I am wondering whether Helen Lewis, Mrs. Hardenstall Sykes, Olive Bolton, Codrill Rose, Mrs. Chas. Foster, Mrs. Collier, A. J. Cook, etc., were being grown.—SPERMIDIAN in Horticultural Advertiser, Eng.

HENRY F. MICHELL CO., 1018 Market St., Philadelphia, Pa

Seed Trade Notes.

Another week has passed without any general killing frost; and this fact, taken in connection with the violent and almost continuous rains we have been having, has contributed to make all lines of horticultural business the quietest of the Fall season, thus far. While the sales of bulbs have been very good and continuously steady—which in the end is what makes the great totals—there has as yet been no marked rush; nor will there be until we have decidedly colder weather. The interest in seed prices and the advance orders being placed for the Spring season of 1908, is much greater than for some years; especially is this true of the Southern dealers, who are apparently very anxious to get their seed stocks together. It is claimed by some of our largest growers and seedsmen, that the reason we are apparently having a period of general shortages of seeds, with resultant high prices, is not because our crop yields of seeds are so very much smaller than the normal, but as a result of such enormous increases in the demand for seeds during the past few seasons. In other words, the yearly increasing seed demand has been much greater than the expansion of the acreages of the seed growers. Of course, this is only another way of stating the supply and demand question; but, to my mind, the real reason seeds are advancing in values is simply because both growers and dealers have at last realized the fact that seeds have been for some years sold lower than consistent with the production of high grade stocks; and when the general trade is ready to pay adequately for seeds, the growers will take heart in the matter, as in the past enormous quantities of seeds have changed hands at such less than the cost of production. All this must change, it would certainly seem.

As I mentioned last week there will be quite a shortage of first quality seed potatoes, for not only are the yields in many sections as low as fifty per cent. of an average crop; but the blight and rot are showing themselves. Potatoes would seem to be generally of inferior quality this year; it is so in Europe, even while their yields would appear to be larger than ours, many sections there reporting "doubtful quality." As is well known, the largest potato growing district in the world is Aroostook County, Maine, and when as this year the crop there is only fifty per cent. of the average and quality also poor, it means advancing prices for seed potatoes.

The tomato seed crop has wonderfully improved over the prospects of a month ago, and in many directions the yields will be very much better than has all the season been expected. The principal trouble in the tomato seed matter—or rather what will make the shortage in this seed crop so acutely felt—is the fact that we have had several, more or less, short yields of tomato seeds the past few years, with the natural result that there is little or no seed on hand from last season. I have in mind a case of a large grower that will well illustrate my meaning. In 1905 he harvested a short crop; in 1906 instead of his usual quantity he only secured twenty-five per cent. of an average yield. Now with a shortage again this year, you can readily understand why tomato seed is not plentiful.

Always a most important factor with seeds that are perfectly good, as regards

a full germination for several years, is the amount of seed carried over in first hands from the preceding crop, otherwise what would happen in a year of a really total crop failure is easily realized.

Quite a little onion seed has recently been turning up in unexpected places; that is, with a great number of small growers whose seed in a year of plenty only adds to the amply allowed for surplus, but in a season like the present is

Stokes Seed Store

219 MARKET ST., PHILADELPHIA.

very much appreciated. These small lots of onion seed will this year help out wonderfully, and go a part of the way at least in offsetting the shortage in the California crop.

Last week, having in my mind that it is even now none too early to arrange

for the novelties and specialties in the seed line that we intend having in our catalogues another year, I mentioned Burpee's two new "Spencer" sweet peas and seeing them so prominently advertised with you this week urges me to say to all growers and dealers having seed novelties to dispose of, to go and do likewise; that is, to advertise their specialties.

CHICAGO.—A. B. Kochersperger, representing Robert Buist Company, Philadelphia, Pa., was in the city last week.

The onion set specialists are having quite a flurry. Peter Hollenbach has delivered a number of car loads but seems in no hurry to book any more orders as the price is steadily advancing. The crop harvested short and the milling shortened it still further, while the bad weather may make further inroads in the final total. The estimate made in this column some time ago, long before harvesting commenced, of a 70 per cent. crop on Chicago whites, was claimed by some at the time to be low, but the final round up will doubtless prove that it was at least 10 per cent. high. As calls are being made on this market from other large onion set centers, it is evident that the same conditions are general.

W. K. W.

SELECTION AND CARE OF SEED CORN.—All seed corn should be gathered before the first severe frost and it may be safely done as soon as the corn is well dented. This year much of the corn is very late and many fields are liable to be damaged by the first severe frost and this makes it all the more important to act promptly. The selected ears should be at once put up in a dry, airy place, where they can dry out naturally. Artificial drying should not be resorted to unless in cases where there is not time for natural drying before severe frosts are liable to occur. When the ears are still sappy the application of artificial heat may easily do harm by inducing fermentation, a very little of which will injure the germs and cause weakness. If the corn can be made dry before freezing weather and then kept in a dry place throughout the Winter, it will be in perfect condition in the Spring. Seed corn should never be put into a building containing live stock of any kind because of the moisture given off by the animals.—Purdue University Experiment Station.

TRADE WITH NON-CONTIGUOUS POSSESSIONS.—The total value of the seeds shipped from the United States to the undernoted non-contiguous possessions, during the year ending June 30, was as follows:

	1905	1906
Alaska	\$1,110	\$ 878
Hawaii	5,790	5,278
Porto Rico	1,883	1,442
Philippine Islands	778	544
Guam		4

The values of the seed imported from these possessions were as follows:

	1905	1906
Alaska	\$ 241	\$ 264
Hawaii	224	34
Porto Rico	6,195	3,418
Philippine Islands	8	10

European Notes.

The closing week in September has provided us with quite a host of sensations agreeable and otherwise. In the first place, we have had the hottest day of the year in Northern Europe, viz., 80 degrees Fahrenheit in the shade. Two mornings previously we had the most severe frost of the present Winter when the thermometer dropped to 26 degrees Fahr. Another agreeable sensation was a break in the drought which had persisted for just 21 days. The rain was, however, of short duration and the Indian Summer still persists, with the result that late ripening seeds are drying up in very good shape and the quality will be far superior to our anticipations.

The frost has killed all the cucumbers, squashes and melons and seriously damaged pole and dwarf beans and tomatoes. Incidentally, it has made the flower gardens look shabby and will thus provide a much needed stimulus to the bulb trade which was very dull while the bright weather lasted. The rain simply cleansed the foliage and laid the dust here in the North, but in the South it has produced some most destructive floods. According to the latest telegrams these have not occurred nearer to the Southern seed growers than Nimes, but even this is dangerously near and makes us anxious for our crops of peppers, tomatoes, egg plant, balsam, zinnia, aster and other flower seeds that are just maturing.

While the dry weather has helped us gloriously with this year's crops, it has caused us grave anxiety regarding our plantings for 1908. Owing to circumstances before referred to in these notes, our cabbages, broccolis, kales, parsley, etc., could not be transplanted until very late; they are consequently quite at a standstill. Parsley looks especially bad, and as, owing to a very short crop, there will not be any surplus carried over this year, the prospect is not very cheering to-day.

The flower seed crop in Germany is always peculiarly interesting at this period of the year. The following is a fair summary at the close of the month: Balsams are killed by frost and zinnias singed by it. Spring sown pansies are giving very fair crops of seed, but there is no reserve stock, so prices are likely to remain high. Asters are doing fairly well on the whole, but the very dwarf sorts have suffered considerably. The dwarf German is practically a failure. Dwarf larkspurs will be very scarce again. Marigolds may recover.

Holland reports foggy mornings, fine days and frosty nights—a very fair Autumnal mixture. EUROPEAN SEEDS.

IMPORTS OF SEEDS, ETC.—September 23.—A. H. Post & Company, 48 packages seed; Maltus & Ware, one box live plants. September 24.—Maltus & Ware, one case live plants; C. C. Abel & Company, 56 cases bulbs; S. D. Crosby, 103 bushels garden seed; L. D. Crossmond & Company, two cases plants; Davies, Turner & Company, 14 cases plants; W. Elliott & Sons, four cases plants; A. N. Fenton, Jr., 36 cases bulbs; C. A. Haynes & Company, 13 cases plants; Maltus & Ware, 149 cases bulbs, 194 cases plants, nine cases trees and shrubs; McHutchison & Company, 77 cases plants, 40 tubs trees; S. G. Polack, two cases plants; J. P. Roosa, nine packages bulbs; C. B. Richard & Company, 250 tubs plants; L. J. Spence, 50 tubs trees, 19 cases plants; J. M. Thorburn & Company, 97 bushels garden seed; O. Tegehaar, 58 cases bulbs; F. B. Vandegrift & Company, 56 cases plants; Vaughan's Seed Store, three cases bulbs, seven cases bulbs and trees; R. M. Ward & Company, three cases bulbs, 16 cases plants. September 25.—J. M. Thorburn & Company, eight bags seed; Schulz & Kuckgaher, 74 cases bulbs; R. M. Ward & Company, 34 cases bulbs; H. F. Michell Company, 10 cases bulbs; L. J. Spence, four bags seed. September 28 and 29.—J. B. Gurman, 100 sacks mustard seed; Maltus & Ware, seven cases plants; A. Olsen, 307 bags clover seed. September 30.—Vaughan's Seed Store, one case bulbs; Brown Brothers & Company, seven bags seed; Vaughan's Seed Store, one case bulbs. October 1.—J. Dunn, Jr., four cases plants; J. Scheepers & Company, 22 cases plants; S. D. Crosby & Company, 200 bushels garden seed; Collector of Customs, one case bulbs; H. F. Darrow, 11 cases plants,

one case bulbs; O. G. Hempstead & Company, 146 packages plants; Hussa & Company, 112 tubs trees, 17 baskets plants, 35 cases plants; Peter Henderson & Company, 100 bushels garden seed; Maltus & Ware, 103 cases bulbs, 119 cases plants; McHutchison & Company, 53 cases plants; F. R. Pierson Company, 41 cases plants; C. B. Richard & Company, 45 packages plants; August Rölker & Sons, 22 cases plants; Ch. D. Stone & Company, 76 cases plants; Santa Fe R. R. Company, 50 bushels garden seed; J. Schultheis, two cases plants; J. M. Thorburn & Company, 33 bushels garden seed, five cases plants; J. H. Troy, two cases plants; Vaughan's Seed Store, 34 cases plants; R. M. Ward & Company, 53 cases plants; Wakem & McLaughlin, 28 cases plants.

be proved by a few interesting figures: The steamer Monteagle of the Canadian Pacific S. S. and Railway Company, which left Yokohama, August 27, 1907 for Vancouver, B. C., took the largest cargo of lily bulbs ever shipped from Japan. A regular record breaker it was on one steamer, consisting of the immense number of 4699 cases or about 360 tons measurement; one ton=40 cubic feet. Taking as an average 225 bulbs per case, this steamer carried 1,057,265 bulbs. The principal portion of this shipment goes to the United States and Canadian cities, although a rather large number reach Europe by this route, partly direct via Montreal and partly by transshipment in New York. The bulbs shipped are at this season, principally *Lilium longiflorum* and its different types and varieties."

NURSERY DEPARTMENT.

Conducted by Joseph Meehan.

AMERICAN ASSOCIATION OF NURSEYMEN.
J. W. Hill, Des Moines, Ia., president; C. M. Hobbs, Bridgeport, Ind., vice-president; George C. Seager, Rochester, N. Y., secretary; C. L. Yates, Rochester, N. Y., treasurer.

The Wisconsin State Horticultural Society has reduced the annual membership fee to 50 cents. It is hoped that 500 new members will result from this movement. The membership fee entitles each to a copy of the annual reports, bulletins, etc.

TRADE WITH NON-CONTIGUOUS POSSESSIONS.—The total value of the nursery stock shipped from the United States, during the year ending June 30, to the under-noted non-contiguous possessions, was as follows:

	1905	1906
Alaska	\$264	\$932
Hawaii	1,931	2,356
Porto Rico	1,387	839
Philippine Islands	89	28
Tutuila	8	

The values of the imports of nursery stock from these possessions were as follows:

	1905	1906
Alaska		\$13
Hawaii	\$78	85
Philippine Islands	2,044	434

Better Prices for Nursery Stock.

Following what is happening in all other lines of business, nursery trees are now considerably higher priced than they were a few years ago, fully double their former price. This is no more than it should be, for everything necessary to produce the trees and to handle them is double the price it was in former years, material, labor and all. Another thing which has justified higher prices is the extra good stock furnished the purchaser. The trees are cared for from their infant stage until sold, pruned, transplanted and fed until they represent fine looking, healthy specimens, unknown in former days. And look at the difference in the way of digging and delivering stock. What old time nurseryman ever balled up the roots of his evergreens before delivering them? To-day the rule is to dig such trees with a ball of soil and tie them up in burlap, so that there really is no risk at all in transplanting them. The frequent transplanting in the nursery makes feasible the retaining of a ball of soil by the roots, even in the case of many pines, known as trees that make but few small roots.

The great prosperity of the country at the present time causes wealth to come to many hitherto unaccustomed to it, and with this there is a greatly increased love for gardening in all its phases, all of which adds to the call on the nurseryman for what he produces. This is gratifying, and it is gratifying, too, to see before us all indications of a long continued busy time for those engaged in the production of plants and flowers.

Another pleasant thing to observe is that the nurseryman and the florist are on a much higher social plane than they were. The talents called for in the profession are better recognized and paid for; capitalists have placed their money in the business, and establishments are run on a scale far higher to-day than they ever were before.

Root Pruning Trees.

Root pruning trees a year or two in advance of transplanting them has been often advocated, yet the recommendation will bear repetition, for it is too good a practice to let go by without having as many persons as possible understand it. If those who have not seen the results of root pruning could but witness the grand root system such trees have after a year or two have elapsed since the pruning, they would have all trees treated in that way they proposed to transplant in a year or two. It requires two seasons' fresh growth after the pruning to have such trees in the best condition for removal. Trees not pruned now would require to rest undisturbed until the Autumn of 1909, unless they were of small size, when one year's growth of small roots would suffice.

In nurseries rows oaks, hickories and similar trees making but few lateral roots naturally, are made as safe to transplant as kinds easily moved when root pruning is practiced. A furrow may be opened along the row, then with a spade the soil excavated until the roots are met with. The greater number of these roots are to be severed, all the large ones anyway, the holes refilled, and then the branches shortened in one-half. The very hardest trees to remove, and trees in woods never transplanted, can be safely found room for on lawns, for there need be no fear of losing them.

Autumn is a good time to do root pruning. There is more leisure then than in Spring, and if the work is done easily new roots are formed before the ground freezes up.

Chamæcyparis (Cupressus) Lawsoniana.

The United States Department of Agriculture has issued a leaflet on the Lawson cypress, giving a few facts concerning its native habitat, its uses, hardiness, etc., all useful and interesting reading. Its range extends from Northern California to Southern Oregon, in a narrow belt bordering the coast, where precipitation is heavy and humidity high. It flourishes in Europe and withstands there and elsewhere a much lower temperature than it meets with in its home.

It is seldom that trees of it of any size are seen in the Middle States. It is believed there is a difference in the hardiness of the tree; probably those from California are not as hardy as the ones from Oregon. At any rate, some trees set out near Philadelphia survive, while others perish. The writer knows of but one or two fair-sized trees of it in this vicinity, and they are perfectly hardy, not fearing zero weather at all. Does

Northern States, although a native of Oregon and Washington; but this is common to other shrubs and trees from the Pacific States. There is, however, a hybrid form, *Ribes Gordonianum*, which does fairly well, and which is a good one. The flowers are of an orange red, showing something of the character of both its parents, which are supposed to be *R. sanguineum* and *R. aureum*.

Ribes floridum, known as the Missouri currant, has light colored flowers, of no great beauty, but those who are fond of black currant fruit may grow the Missouri sort for its berries, which are in taste not unlike those of the black currant.

But nurserymen will find *R. aureum* the best seller in the long run, especially if the pruning of it, as recommended, be attended to.

Carya Tomentosa.

We do not think there is any country so rich in valuable forest trees as our own. From the Atlantic to the Pacific our forests teem with trees the timber of which is not only prized at home, but is eagerly sought for by almost all countries of Europe. Take, for instance, the hickories, which are represented in several species, and which grow over many of the Northern and Southern States. Almost every one of them is of value for its timber, and many of them for their nuts. We give an illustration of one well known species, *Carya tomentosa*, known also as the "Mockernut" and the "white hickory." Its wood is most excellent for fuel; and the meat of its nuts is not to be despised. Many of the hickories are difficult to distinguish by their foliage, but all can be identified by their nuts. Those of the one illustrated would be deemed almost round were it not for its four-angled ribs. The meat of this one, though inferior to that of the shellbark, is very good, but the shells are so thick that the kernel is not easily reached, and when it is, it is less abundant than desirable.

As trees for landscape work hickories are not to be despised. The one pictured gives a fair representation of its habit of growth. Such a tree standing alone on a large estate would command a great deal of attention. This one is of natural growth, flourishing where once was a forest.

There are nearly a dozen species of hickories native here, inhabiting forests from the far Northern to the far Southern States. Some of the same species are found from one end of the range to the other.

Of all the hickories, the pecan nut, *Carya oliviformis*, is the most valued for its nuts; they are of delicious flavor. Next comes the shellbark, *Carya alba*, and after it the Western shellbark, *Carya sulcata*. These three are all to be found in markets, but not any of the others.

When it comes to the quality of the wood there are three greatly esteemed—the shellbark, the pignut, (*C. porcina*) and the Western shellbark, (*C. sulcata*), perhaps of most value in the order they are listed;

but one and all are valuable trees for yielding wood for fuel.

Nurserymen find great care necessary to have trees that will live when transplanted. Left alone a hickory will make but a long tap root, almost destitute of fibers, which means that it will not live when transplanted. To obviate this seedlings are transplanted when about a foot high, which takes in seedlings two or three years old. The ends of the roots are cut off, to force out side roots. Then another removal should be made when the trees are about three feet high, after which they should be in good condition for future transplanting.

It has been asserted that when seedlings are raised in sandy soil they are much better supplied with fibers than when in stiff soil, but of this we have no experience, though we think it probable.

JOSEPH MEEHAN.

Carya Tomentosa

any one know of trees of it flourishing north of Philadelphia?

The leaflet of the Department referred to states that light shade is good for the tree as well as constant humidity. This would suggest its being planted near lakes or other large bodies of water. Only those who have seen it in Europe can speak of its grand appearance as it grows there.

Flowering Currants.

One of the oldest known flowering shrubs of our gardens is the popular one known as flowering currant, *Ribes aureum*. It is no wonder it keeps in the lead of popularity, for one more beautiful than it would be hard to name. It is not one of the very earliest flowering shrubs of Spring, while still an early one, blooming in May. Its beautiful clusters of yellow blossoms interest every one, the yellow is so deep and the flowers so numerous. When permitted to grow at will it is not as bushy as it becomes when pruned every Spring. The pruning need not be heavy, just enough to bring the plant into shape; and if the ends of the growing shoots be nipped back in Summer, this tends still more to promote bushiness.

The *Ribes sanguineum*, which does so well in England and is such a favorite there, does not thrive in our

AMERICAN ASSOCIATION OF PARK SUPERINTENDENTS.—This progressive organization has decided to send out part of its bulletins in sections; and Secretary Mulford asks for suggestions as to topics to be discussed. Bulletin 77 will deal with "Salaries and Wages of Park Employees."

California Plant Notes.

An interesting family of trees grown on this coast is that of casuarina. The color of the wood being red has given it the name of "beefwood," but how the name of "she oak" was ever suggested is one of the unsolved problems in plant nomenclature.

There are several varieties of the tree here, each with its distinctive characteristics. To the mind of the writer the one known as C. stricta is the most beautiful, because of its erect habit of growth, and dense foliage if given enough water during the Summer months. At a distance it resembles a white pine tree with dark green foliage thickly set on the trunk as well as the branches. The trees are not drouth-resistant in the sense that the term is applied to pepper and eucalyptus trees, but as heat-resistant plants they have no superior. Torrid waves of heat—120 degrees Fahrenheit in the shade—as they roll across the verdureless plains of California only seem to heighten the color of the foliage of this tree, but it must have water and plenty of it under those conditions, while no amount of water at the roots, of course, will save it from being scorched by these hot dry winds which feel like the breath of an oven and sometimes continue for a month at a time, though the velocity seldom reaches six miles an hour.

The cones of this variety are small and inconspicuous, while those of C. equisetifolia are large, oval, composed of 22 rows of one-ovuled ovaries most beautifully set in spiral rows. The foliage is a foot or more in length, round, jointed, about a sixteenth of an inch thick and of weeping habit. The flowers are unisexual, beginning to make their appearance now. The staminate ones appear on the ends of the branches, thickly set among the foliage, giving it a sombre red color.

For the interior valleys of the State where the heat becomes intense during the Summer months and where water can be had to meet their requirements, these trees should be extensively planted.

P. D. B.

FERNS, Boston and Scottii, 6-in. pots, at \$40.00 per 100.

Boston, in pane, large, \$1.00 and \$1.50 each.

Whitman, 6-in. pots at \$60.00 per 100.

GROWERS OF CHRYSANTHEMUMS WHO HAVE MORE STOCK PLANTS THAN THEY NEED, WILL FIND A READY SALE FOR THEM BY PLACING AN ADVERTISEMENT IN THE FLORISTS' EXCHANGE.

Rose Growing in California.

The growing of roses of all varieties in commercial quantities has not been a great success on this coast during the years that have passed in the history of the nursery business. Multiplied thousands of young plants have been bought of propagators in the Eastern States, lined out in nursery rows, grown a year, then sold to planters; while other thousands have been sent to amateur growers directly by mail. The transportation charges are usually about as much as the original cost of the plants and packing; in one case the writer knows of they were twice as much as the plants cost, because of the heavy material used to make the boxes. One nurseryman near this city bought 30,000 of this class of stock last April from Ohio to grow into large plants. When rooted and established, no locality in the world produces bushes so large nor flowers so fine as does California. Banksia plants may be seen in this State with bodies eighteen inches in diameter, with tops completely covering two storied houses, Lamarque, the Cherokees and Mme. Alfred Carriere about half as large. A bush of this last named variety, trained in tree form, had a top of ten feet spread, with a trunk twelve inches in diameter at the base.

The difficulty has been in rooting the cuttings in sufficient numbers to meet the demand for plants. The low relative humidity has seemed to be the problem to solve. It is true that working on manetti stocks, the cuttings of which root readily, is practiced by many of our nurserymen, but it is a laborious and slow process which so increases the cost of production that they cannot compete with Eastern growers of glass house stock, who sell at least ten plants to Pacific coast planters for every one disposed of by our own growers. Then again, budded stock is not in favor because of the tendency of the stock to sucker and crowd out the bud.

All sorts of methods have been resorted to by nurserymen with varying degrees of success, and the problem after years of toil and experiments has been successfully solved by C. E. Howland, president and manager of the California Rose Company, Pomona. At present they have twelve acres solid devoted to roses one year old, and a beautiful sight it is to see that field in full bloom. They have 400,000 cuttings in frames with a 98 per cent. strike, and are at work now on the last 100,000 batch to complete their half million for this year.

The method employed is simple but requires the closest attention to details from the making of the cutting to the hardening off process. Hotbeds of manure 18 inches deep are covered with two inches of soil, then with clean sand to a depth of three inches. The frames are covered with sash which are kept closed night and day, except to syringe the stock every morning, and then but one sash is lifted at a time, until the plants are rooted when the hardening off process is begun. When this is finished the little plants are exposed to our bright sunlight and left in the beds until the following March, or April, then lined out in rows. The shading of these frames is unique and peculiar. A burlap covering is stretched on poles about eight feet above them, and blinds of the same material are let down on the east side the first part of the day, on the west side the last part of the day. The frames are but six feet apart and each one has its own shades. The glass is kept clean to admit all the light that comes through the shading. The beds are sunken in the soil instead of being elevated above it. The wonderful success attending this man's labor is so remarkable that I think it worth while to mention it in the columns of your paper. Unfortunately for the man, he, like many another worker, has overdone it, and is broken in health, a willing sacrifice to a great work—that of making the world the better and more beautiful for having lived in it.

P. D. BARNHART.

Lady Gay Rambler

2 year, field grown, well branched plants. Especially suited for forcing. \$25.00 per 100. Write for prices on extra strong 3-year-old plants.

A RECORD TO BE PROUD OF

The Florists' Hall Association has paid 1,040 losses amounting to \$102,000.00. For particulars address

JOHN C. ESLER, Saddle River, N. J.

Prices Advertised in these Columns are for THE TRADE ONLY—When Writing Please Mention THE FLORISTS' EXCHANGE.

(47) **Mealy Bug.**—Under separate cover I send you a plant with some insects on it. The insects have been on coleus, polyanthus, etc. Please tell me what they are and what to do to exterminate them. R. E. G.
North Carolina.

—The insects on the plant sent for examination are the common mealy bug. A good remedy for these will be found on page 462 of our last week's issue, where the method for treating gardenias affected with this insect was explained.

(48) **Club Root on Carnations.**—Kindly tell us the cause of club root on carnations and cure for same. We saw some signs of it when housing the plants on August 1; since that time it has greatly increased on some varieties, until we have pulled out quite a number of plants. We have never used any soil on our benches that has been in the house before; each year we get soil from a new piece of land, and we have always put our plants in a different place in the field. We use a liberal supply of lime both in field and in the compost heap. Now, if we propagate from plants affected with this disease, will the young stock inherit it? J. L. O. & Co.
North Carolina.

—This is a genuine case of club root on carnations, and so far as we know, this class of plants has not been troubled to any extent with the disease. When club root gets into the soil, it is well understood that outside of a good dressing of lime occasionally, which serves as a check, there is nothing that will free the soil except a good hard freezing; and, in the present case, seeing that lime has been used, we do not see that any remedy can be suggested other than using the lime as freely as possible continuously. Perhaps some reader who has had experience with club root on carnations can suggest a better remedy.

(49) **Treatment of Bulbs.**—How long does it take tulips and hyacinths to flower after planting, also how to grow lily of the valley? SUBSCRIBER.
Vermont.

—Ordinarily, the time it takes tulips and hyacinths to flower from the time of planting is about six months—that is, when the bulbs are planted outdoors and are allowed to come into flower the following Spring in their natural course. We presume, however, that the question refers to tulips and hyacinths that are to be forced into flower during the Winter time. If such is the case, and presuming that the bulbs are already planted and stored away in some cellar or are buried in the ground outdoors, if they are allowed to remain there until they get well rooted, which means about two months, they can be brought into bloom by exposing them to the heat of the greenhouse, in about three weeks' time if not brought into the greenhouse before January 1, but if brought in before that time, a few days longer should be allowed.

To grow lily of the valley indoors for cut flower purposes, the pups should be placed in a bench of sand or soil where a bottom heat of 75 or 80 degrees can be maintained steadily, the temperature of the house being kept a few degrees below that. When the pups are in good condition—that is when they are thoroughly dormant, lily of the valley can be brought into flower in from twenty to twenty-five days.

Dreer Specials in Ferns

PTERIS WILSONI We feel very enthusiastic over this fern; it is not only the most graceful, but also one of the hardest of the crested forms of Pteris, useful in fern dishes as well as for growing on into specimen plants in 6-inch pans; in this size it appeals to every buyer and meets with ready sales. We have a fine lot of 6-inch pans, \$4.50 per dozen; \$35.00 per 100; 3-inch pots, \$5.00 per 100.

Adiantum Farleyense

A fine lot of 5-inch pots now ready, \$1.00 each.

Adiantum Rhodophyllum

The miniature Farleyense, as it is sometimes called, very fine plants, 3-inch pots, \$10.00 per 100.

Adiantum Macrophyllum

The bronzy red or almost crimson foliage of this variety during the Fall months appeals to all. This is the first time we have been able to offer it in quantity and at a popular price; fine 3-inch pots, \$15.00 per 100.

Adiantum Croweanum

We offer a fine lot of this, the most useful and profitable of all the Maidenhair Ferns for cutting; fine 3-inch pot plants, \$2.00 per dozen; \$15.00 per 100; \$140.00 per 1000.

Nephrolepis Amerpohlii—The Philadelphia Lace Fern—This is the latest addition to the Ostrich Plume type and is certain to prove a welcome and popular variety, holding for delicacy and gracefulness the same position among the Nephrolepis that Adiantum Gracillimum does among the Maidenhair Ferns. The pinnae are so finely divided that it reminds one of a piece of fine lace; the fronds are broad and of a depth which gives them a cushion-like appearance. It forms a beautiful specimen and is admired by everyone who sees it. 50c. each; \$3.50 per dozen; \$25.00 per 100; \$200.00 per 1000.

Nephrolepis Todeaoides—Toden, or Filmy Fern-like Nephrolepis—This is an English introduction that has received a first-class certificate both from the Royal Horticultural Society and from the Royal Botanic Society of London, and is likely to become a most important commercial variety. While in a general way it reminds one of an exceptionally well-grown plant of N. Elegantisima, it is entirely distinct from this and all others, in its strong yet compact growth and its bold heavy foliage, which is distinctly tripinnate or three times divided. Specimen plants which we now have growing are admired by everyone and we have great faith in its future. 4-inch pots, ready Oct. 1st 50c. each; \$5.00 per dozen; \$40.00 per 100; 6-inch pots, ready now, fine plants, \$1.00 each.

A fine lot of Ferns in 3-inch pots, assorted varieties for Fern dish work. \$6.00 per 100, \$50.00 per 1000.

Asparagus Plumosus Nanus

2 1/2 in. pots, 60c. per doz., \$4.00 per 100; 3 in. pots, \$5c. per doz., \$6.00 per 100.

ADVERTISING RATES.

One-half inch, 75c.; 3-4-inch, \$1.00; 1-inch, \$1.25. Special positions extra. Send for Rate Card showing discount of 10c., 15c., 25c., or 35c., per inch on continuous advertising. For rates on Wants, etc., see column for Classified Advertisements.

Copy must reach this office by 12 noon Wednesday to secure insertion in issue of following Saturday.

Orders from unknown parties must be accompanied with cash or satisfactory references.

Obituary

William L. Bond.

William L. Bond, aged 81, one of the oldest florists in Pittsburg, Pa., and a well-known resident of the Thirty-fifth ward, in which he had lived for over 28 years, died October 3, 1907, at his home, Virginia avenue, Duquesne Heights. He was born in England and came to this country from Gloucester, in 1847. He was associated for a long time with Downing and aided him in laying out the grounds of the Smithsonian Institute at Washington, D. C. For many years he engaged in the business of landscape gardener and horticulturist and owned one of the first nurseries in Pittsburg. He was one of the first vestrymen of Grace Protestant Episcopal Church of Mt. Washington and for 28 consecutive years was assessor of the Thirty-fifth ward. He leaves five sons, Thomas G., William L. Jr., Robert C. and Charles A., of Pittsburg; and Frank S. Bond of Erie.

Samuel W. Lewis.

Samuel W. Lewis, one of the best known nurserymen in Rhode Island, died at his home, Beechwood Farm, Cowessett, Tuesday night, October 1, 1907. He had been in poor health for several years, being a sufferer from an incurable malady.

Mr. Lewis was born in Exeter, R. I., 65 years ago, his father being a farmer and nurseryman. When about 30 years of age Mr. Lewis went to Providence and established a nursery in the Olneyville district. For the next quarter of a century he did business in this community, becoming well known throughout this part of New England for his flowers, bees, honey, etc.

His name was often seen among the prize winners at the Rhode Island Horticultural Society's exhibitions, of which organization he was an active and prominent member.

He leaves a widow, but no children.

G. A. J.

PAMPHLETS RECEIVED.

FIELD NOTES ON SWEET PEAS.—Edited by Lester L. Morse. Publishers, C. C. Morse & Company, San Francisco, Cal. Price (Paper) 50 cents. Illustrated.

This is a revised edition of a similar pamphlet published by the Messrs. Morse in 1905, the data furnished being brought down to 1907. It is a most useful compilation, providing a great deal of instructive and serviceable information to all interested in the sweet pea.

In his introduction the Editor says:

"The demand for sweet pea seed this season is even greater than when our last book was written two years ago, and our acreage is larger. The introduction of Countess Spencer, as we predicted, has added to the popularity of the flower and the greatest amount of development work is now being done on this type, so that, within a short time, we will have them in all shades. Personally we have twenty-five splendid selections of the Spencer type, most of them to be ready for introduction next year and the year following. We have them not only in the existing sweet pea shades, but also in several entirely new and distinct shades."

"The Spencer types have appeared in new varieties to a great extent in England, and sweet pea enthusiasts

Pale Yellow or Primrose. Clear primrose, white seeded—Burpee's Primrose Spencer, The Hon. Mrs. E. Kenyon. Black seeded, opening with tint of pink, but changing to clear primrose when expanded—Queen Victoria.

Very Light Pink and Primrose—Stella Morse, Marchioness of Cholmondeley, Golden Rose, Mrs. H. K. Barnes.

SHADES OF PINK. Light Pink (clear pink)—Florence Morse Spencer, Prima Donna, Katherine Tracy, Agnes Eckford. Light pink (buff pink)—Queen of Spain, Countess of Lathom, Coral Gem, Venus.

Light Pink Shaded and Deeper Pink—Countess Spencer, Enchantress, Gladys Unwin, Mrs. Alfred Watkins, Paradise, Lovely, Janet Scott, Dainty, Nymphaea, Hon. F. Bouverie.

ROSE SHADES AND PINK (Bi-color). Rose and very light pink, usually called rose and white—Apple Blossom, Earliest of All. Deeper rose and pink—Jeannie Gordon, Royal Rose, Triumph.

ORANGE PINK OR SALMON SHADES. Orange pink (semi-hooded)—Bolton's Pink, Miss Willmott, Lady Mary Currie, Aurora. Orange and pink (open form)—Helen Lewis, Henry Eckford, Evelyn Byatt, Gorgeous.

SHADES OF RED. Bright red (Crimson Scarlet)—Pure red—King Edward VII., Salopian. Approaching pure scarlet—Queen Alexandra, Fadeless Scarlet Gem. Cerise and Crimson—Coccinea, Prince Edward of York, Hettie Green.

Rose Crimson.—Clear Crimson—Prince of Wales, Majestic, Jessie Cuthbertson (striped), Mrs. Jos. Chamberlain (striped). Rose Crimson, showing veins of deeper shade—Geo. Herbert, John Ingman, E. J. Castle, Phyllis Unwin, Lord Rosebery.

LAVENDER AND MAUVE SHADES. "Light Lavender" and Mauve—Mrs. Charles Foster, Frank Dolby, Lady Grisel Hamilton, Mrs. Geo. Higginson, Jr., Countess of Radnor, Lady Nina Balfour.

Lavender and Mauve, Picotee Edged—Phenomenal, Lottie Eckford, Maid of Honor.

Light Purple, Mauve and Blue—Mrs. Walter Wright, Romolo Piazanni, Mrs. Charles Mander, A. J. Cook, Emily Eckford, Dorothy Tennant, Admiration, Earl Cromer, rosy wine color, a shade peculiar to itself.

BLUE AND PURPLE SHADES. Bright Blue—Helen Pierce, Flora Norton. Light Blue and Purple—Senator (striped). Purple standard, blue wings—Countess of Cadogan, David R. Williamson. Clear Purple—Duke of Westminster.

VERY DARK SHADES. Maroon, Indigo and Violet. Clear Deep Maroon—Othello, Black Knight, Black Michael. Claret Maroon—Duke of Clarence. Deep Maroon and Violet—Horace J. Wright, Shahzada, Duke of Sutherland. Violet and Indigo—Lord Nelson, Navy Blue.

A complete list of varieties, with full descriptions as well as some comparative notes are given, and includes all of the varieties that have been introduced by seedsmen up to the present season—not all of the names, but those kinds which the firm has personally tried. This is a very valuable part of the pamphlet. Then follows lists of and comments on Zvolanek's varieties and the Cupids.

A collection of fifty varieties, "as the public uses them," is furnished, the comparative popularity of the different kinds being indicated by actual orders, which must represent sales. The following list is based on this season's contract orders, the names of the varieties as given in sequence representing the relative demand for each. The orders represent an average of 100 dealers, the largest in America and England.

King Edward VII., Emily Henderson, Dorothy Eckford, Lady Grisel Hamilton, Hon. Mrs. E. Kenyon, Katherine Tracy, Miss Willmott, Gladys Unwin, Salopian, Blanche Burpee, Mrs. Walter Wright, Helen Lewis, Countess of Radnor, Helen Pierce, Lovely, Countess Spencer, Bolton's Pink, Romolo Piazanni, Coccinea, Mont Blanc, Prima Donna, Black Knight, Janet Scott, Earliest of All, Countess of Cadogan, Mrs. Geo. Higginson, Jr., Shasta, Ex. Ely, Blanche Ferry, Flora Norton, Othello, Prince of Wales, Dainty, Blanche Ferry, America, Scarlet Gem, Evelyn Byatt, Lady Mary Currie, Duke of Westminster, Captain of the Blues, Sadie Burpee, W. S., Aurora, Jeannie Gordon, Lottie Eckford, Gorgeous, David R. Williamson, Lord Rosebery, Black Michael, Her Majesty, Stella Morse, Agnes Johnson.

"An analysis of this list shows that in the first twenty there are four whites, and in the fifty there are six whites. There are two reds, three pinks, two lavenders in the first twenty and one more of each in the fifty. The poor seeding qualities and consequent higher price of Countess Spencer undoubtedly operates against its being higher up the list, for in our opinion it should come first."

The editor then furnishes what, in his opinion, is a good selection of fifty varieties based on those that are now offered at wholesale. We give twenty of these as under. The first six are what he regards as the best six; the first ten what he considers the best ten, and so on.

Countess Spencer, the new giant pink.
Dorothy Eckford, the large white.
Phenomenal, the orchid flowering blue edged white.
Helen Lewis, the new giant orange pink.
Lady Grisel Hamilton, the largest flowering lavender.
King Edward VII., the largest pure red.
Hon. Mrs. E. Kenyon, the largest primrose.
Mrs. Walter Wright, the largest purple blue.
Navy Blue, the best dark blue variety.
Sybil Eckford, the best buff and pink.
Prince of Wales, the largest rose crimson.
Jeannie Gordon, rose and pink.

Mrs. E. A. Scribner, Detroit, Mich.
Treasurer Ladies' Auxiliary S. A. F.

asts, both the amateur and those in the trade, have exhibited and sent out a great many novelties that have not been properly 'fixed.' These have broken into all sorts of mixtures, and it is questionable to our mind whether the names given these should be allowed to stand.

"In the eagerness to be first to exhibit new varieties, a great repetition of names has resulted, and the future promises a hopeless confusion unless something is done to establish a recognized list. There is no tribunal better qualified to establish such a list than the National Sweet Pea Society of England, and the only hope of our avoiding the multiplication of names for the same thing is for this society to arbitrarily decide the proper nomenclature and classification of varieties as fast as introduced.

"There is still great opportunity for the development of new shades and sizes and forms of the sweet pea, and it is safe to predict that the next few years will develop even greater changes than the past.

"The almost seedless character of Countess Spencer and its kindred types may, however, prevent their general use, and the standard forms will always be in demand and we shall continue to work with them as well as with the new Spencer types."

The matter of classification according to "form" is dealt with and types of the hooded and open forms named. Then comes a color classification and preferred list, the varieties in each color class being named in order of merit. The following sorts are included in the preferred list in their respective colors, and it is recommended that all other varieties in those colors be dropped.

WHITE AND VERY LIGHT SHADES. White—Pure white, white seeded—Burpee's White Spencer, Nora Unwin, Dorothy Eckford, Shasta, Emily Henderson, White Wonder, Mont Blanc. White, black seeded, showing tint of color when first opened, but changing to pure white when fully expanded—Sadie Burpee, B. S.; Burpee's Earliest White.

Very Light Pink, Almost White—Modesty, Ramona, Sensation.

Ouhello, the largest and best maroon.
Janet Scott, the best deep pink.
Mrs. Geo. Higginson, Jr., the only azure blue.
Queen Alexandra, the new scarlet.
Duke of Westminster, the best clear purple.
John Ingman, the best rose crimson, veined.
Helen Pierce, the new mottled or gloxinia flowered.
Prima Donna, the favorite pink.

OUR READERS' VIEWS

Uniform Names of Plants.

Editor Florists' Exchange:

Under the heading of "Uniform Names of Plants" in your issue of September 28, James MacPherson in recommending the procuring of Kew Guides by those who wish to use them toward a uniform naming of plants winds up by saying: "When these works are obtained, however, the next thing will be to use them. Go over the catalogues name by name. Then even Messrs. Meehan may drop 'Cochorns japonicus.' Whether friend MacPherson means me or the firm I do not know. No doubt he has seen the name used somewhere instead of *kerria*, but it has been an oversight. In the firm's general catalogue of the Germantown branch, both the 44th and 45th editions, now before me, *kerria* is given as the correct name, as it should be.

Names learned years ago are hard to forget, and I may have written *corchorus* instead of *kerria* at some time, which I should not have done.

JOSEPH MEEHAN.

Editor Florists' Exchange:

With reference to your invitation to show specifically where Bailey's cyclopedia fails in uniformity is easy enough. I need only refer to *Macnura aurantiaca*, which that work gives as *Toxylon pomiferum*, and to *Lindera Benzoin* ("*Benzoin Benzoin*"), which Bailey gives as *B. odoriferum*, if I mistake not. I haven't the book before me.

A man cannot follow two guides going in different directions at the same time, any more than he can serve two masters. If you want a uniform lot of names you must stick to one authority; you cannot use two or more without getting mixed.

I remember very well that I begged Professor Bailey to keep to the names of the "*Genera Plantarum*" of Bentham and Hooker, and it was chiefly because he didn't that he ceased to get anything from me, for I didn't care to be bothered with his galleys.

Plant names are not a question of this country or that; they are world names. Therefore, for any compilers to undertake to depart from the best recognized works does more harm than good. Both Nicholson and Bailey have committed this error in a great number of cases. Therefore I repeat, that the only safe guides extant are the Kew publications, which keep up-to-date without being too previous, and without which the dictionaries of Nicholson and Bailey would have been difficult, if not impossible to produce. It is manifest that any departure from them must breed confusion, and does all the time.

As for unsolved problems, let Kew solve her own problems; she has the best show in the world to do so. Then get her conclusions and keep getting them until you reach uniformity.

If you have a better plan, please state it.

Trenton, N. J. JAMES MACPHERSON.

Gladiolus "Gelria."

Editor Florists' Exchange:

A year ago I purchased in Europe a thousand gladioli bulbs called "*Gelria*" and which have been highly commended before horticultural societies on the Continent. I regret to say, however, that I was much disappointed in them as I saw nothing of particular merit, with the exception of two or three varieties which I recognized as having been introduced some years ago by V. Le-moine & Sons, of France, one of which was the variety Baron Hulot. The majority of the stock appeared to me to be chance seedlings, the parentage of which I would say was from the species *Papilio*.

I would like to know if there are any other American growers who have tested this stock, and to learn their experience with and opinion of it?

A. C.

Some interesting papers are crowded out of this week's issue; they will appear in future numbers as space permits.

Timely Suggestions to Steam Boiler Operators.

Editor Florists' Exchange:

The most unfortunate accident by which the plant of George M. Kellogg, at Pleasant Hill, Mo., was wrecked by a boiler explosion on September 26, and loss of life narrowly averted, would seem to come as an expensive but instructive lesson from which many may be benefited. While, as a rule, every man operating a steam boiler knows to a greater or less extent the dangers attendant thereupon, the average grower seems to figure out that because he uses low pressure, in many instances upon a boiler built for high pressure work, precautionary measures are unnecessary, or a little too much trouble. Such ideas are mere surmises, and may prove a mistake and occasion loss even by a minor occurrence, such as the development of a leak some cold night when pressure has been slightly increased.

These things have a knack of happening at the most inopportune time, and would in nearly all cases be averted if the following precautionary measures coming from a steam engineering standpoint were observed:

All boilers whether for high or low pressure should be tested hydrostatically every year or eighteen months, and to a point beyond normal steam pressure. Each day, see that the safety valve, steam and hand gauges are in good working order. Applying this for the benefit of our brother growers would mean to test each steam boiler during its idle season with cold water from 30 to 50 per cent. higher than the ordinary steam pressure required. This is the most accurate and the safest test, and in many instances the tank or city water supply will give all the testing strength necessary without the use of a pump. Where a pump is necessary, the ordinary spray, or bucket pump commonly used around greenhouses, works admirably by connecting after the boiler is filled with water. Care is essential, as these little pumps raise pressure very quickly where connections are tight, and with ease to the operator.

Safety valves wear in proportion to use, and in other cases will cement themselves in their seats, rendering them unreliable. The first named trouble may be readily overcome by the use of finely powdered emery mixed in a little oil, and the valve reground by hand until both surfaces become bright. The second named cannot occur if the safety valves are tried occasionally by hand. This valve is the only quick automatic way in which excessive pressure can be relieved, and is accordingly of the greatest importance. If the hand and glass gauges are cleaned occasionally with live steam, the man in charge cannot fail to know his water levels. Where boilers are fed from tanks or other artificial sources, be sure to see that no soap or oils are permitted to find their way in, as foaming might result, and this constitutes one of the greatest dangers in this connection; it frequently requires considerable time feeding and blowing to relieve such conditions.

An observance of these rules may do no apparent good, but as an "ounce of precaution," they stand unexcelled.

JAS. L. CARBERY.

International Conference on Plant Hardiness and Acclimatization.

The Horticultural Society of New York opened its national conference on these subjects in the rooms of the American Institute on October 1 with the presentation of a paper by Dr. D. T. MacDougal of Carnegie Laboratories of Tucson, Arizona, on the "Factors Affecting the Seasonal Activities of Plants," in which he discussed the effects of rainfall, moisture, temperature, atmospheric pressure and the physiological structure of the plant itself in relation to its behavior to exterior conditions. He showed how certain plants of aquatic nature in temperate regions have been acclimated into mountainous regions in more northern climates.

The first day's proceedings followed on the cue given by Dr. MacDougal's paper, and discussed such problems as evaporation as influencing vegetation and air drainage. In the latter paper, Dr. Bessey of the Shtropical Laboratory, Miami, Florida, illustrated how plants in given elevations in the same latitude might succumb to effects of frost while others did not, according to whether there was adequate air drainage or not. This point was illustrated by photographs showing how in situations where the air drainage was not provided, the lower portion of the tree from the ground up would suffer from frost, whereas the portion above that which was open to a free circulation of air was unaffected.

The program of the society as arranged, discussed these physiological questions throughout the first day, reserving questions of specific cases for the last day of the conference.

On October 3, the conference met in the museum of the New York Botanical Garden, and after the reading of a few papers, the members present were enter-

tained at lunch and the conference finally adjourned into the grounds being conducted around the plantations by George V. Nash, who, in place of reading the formal paper credited to him on the program, presented the actual specimens as they were growing in the grounds, which was a most convincing and thoroughly practical method of laying before the conference the various plants that he had proposed to outline in his paper entitled "Observations on Hardiness of Plants Cultivated at the New York Botanical Garden."

On the second day of the conference, no formal meeting for the presentation of papers was held, but the Horticultural Society of New York entertained the delegates by taking them on an excursion up the Hudson River as far as Poughkeepsie and back to New York City, dinner being served on board, and informal discussions were held as occasion offered. Socially, this part of the program was a decided success and the members individually declared that they had derived the greatest possible benefit from the opportunities thus offered for friendly intercourse with each other.

As to the result of the conference, the key-note will appear to have been struck by Professor N. E. Hansen, of South Dakota, who boldly asserted that the De Candolle's law still held good—that no plant had been extended 100 miles north or south of its natural range. This assertion, based on Professor Hansen's experience in the cold, arid regions of this country and his travels into the northern countries of Europe and Asia, stimulated the most interesting discussion that so far as we are able to see, no evidence whatever was produced, the theory of DeCandolle and the belief of Professor Hansen, namely, that acclimatization, inasmuch as it referred to the introduction and inurement of a plant into a climate to which it was naturally foreign, was a physiological impossibility.

A considerable degree of support to this idea was lent by a contribution of Henry Hicks of Long Island, who illustrated by means of diagrams and charts that the acclimatization so called of exotic plants into the American climate is governed absolutely by the maximum and minimum range of temperature within the correlated regions. That is to say, that if in the latitude of New York, for instance, the range of temperature is 60 degrees, with a minimum temperature of 10 degrees below zero in January, it was hopeless to expect to introduce with any degree of success, plants from regions elsewhere which had a greater range of temperature and in conjunction with a lower winter minimum. By this token, he showed that plants of the Caucasus and a certain region of Eastern Asia, and the conifers of Colorado, were the only ones adapted to the climate of New York. It is certainly significant that in the tour of the Botanical Gardens afterwards, the exotic plants introduced which were evidently most comfortable in the new situations were those from the regions indicated by Mr. Hicks.

It would appear that a sharp line of demarcation must be drawn in the definition of the word acclimatization. In its strict sense it means the extension of the range of a species into regions that are normally non-congenial or impossible to it. The extension of the range of a group of plants by hybridization can not justly be called acclimatization for the resulting progeny assuming that it is a hybrid between a tender and a hardy species, while increasing the range of hardiness of the tender species, reduces that of the hardy one. In such a case, indeed, we are dealing not with an extended range of an original type, but with an original range of an entirely new individual. The total result of this conference, therefore, would seem to be an endorsement of DeCandolle's law as previously stated, and if the readers of this report can adduce any evidence which would tend to lessen the effect or the importance of this law, it would be most desirable to have them introduce the facts in evidence at this time.

We are glad to learn that the society proposes to publish in full the various papers that were submitted at the conference. Owing to the time available, only twelve of the actual papers were read in full, and a number of others being submitted by title, the secretary merely presenting a summary of the argument contained in each, the conference deciding to refer the whole for publication. A complete program of the papers read and submitted has already appeared in our columns.

L. B.

American Carnation Society.

The annual premium list of this society will soon be issued, and any one having special prizes to offer are requested to send full particulars of the same to the undersigned.

Variety Registered.

By H. A. Jahn, New Bedford, Mass.

LLOYD, white carnation; flowers three and one half to four inches; free and continuous bloomer; habit is the very best. Seedling of 1902; parents two pedigree seedlings dating back to William Scott and Heintz's White.

ALBERT M. HERR, Secretary.

Lancaster, Pa.

The Commercial Growing of Ornamental Plants.

By W. H. TAPLIN
(Concluded from page 467.)

Ferns.

Next in importance to the palms among the commercial ornamental plants are the ferns, and to one unfamiliar with the trade the numbers of these plants that are annually distributed in our large cities would seem marvelous. The fern trade may properly be divided into two sections, the first comprising those that are grown into specimens in pots of 5-inch size and upward, and the second including the various ferns that are grown for the purpose of filling table ferneries and making other decorations. These latter ferns for small ferneries are grown by the million in small pots, 2-inch to 3-inch being the sizes most used, and while the wholesale prices are not high, yet the crop is grown in a reasonable time, and is fairly remunerative.

The species most in demand are various forms of the pteris and nephrodium groups, the chief essentials for a plant that is to be thus used being rapidity of growth, compactness of habit, and distinctiveness of foliage.

Among the ferns that are grown into larger sized plants for house and store decoration, we find a greater variety, there being some of the maidenhairs or adiantums, a number of nephrolepis, some pterises, and an occasional representative of the tree ferns, among the most notable and satisfactory of the latter being Cibotium Schiedei.

These ferns are all grown in moderately rich earth, but are given just as much fresh air and light as they will stand, this resulting in a sturdy growth of fronds that will endure much more abuse than those that are grown in closely shaded houses and potted in light soil.

The methods of propagation vary with the species, some being gotten from divisions of the crowns, others from runners, and those used in the small sizes for table ferneries being raised from spores almost exclusively.

As a business proposition, the fern department offers some inducements to the expert grower, but stock of this character must be of first-class quality to insure a prompt and profitable sale.

The main crop of small ferns for ferneries is sown during the preceding Autumn, the time required from the sowing of the spores until the seedlings are large enough for potting varying between six and nine months, the practice being to sow the spores while fresh, as some species lose their vitality by long keeping. The supply of spores is usually a home product, and requires the exercise of judgment in gathering and preservation. Palm seeds are almost entirely of foreign origin, the howeas being brought from Lord Howe's Island, arecas from Brazil, Cocos Weddelliana from the same country. Livistona chinensis is sometimes home grown, and is also sent from Cuba and South America, phoenix are rather widely spread, and Livistona rotundifolia is grown in Hawaii, though a native of further south.

Other Ornamental Stocks.

Ficus elastica and Ficus pandurata are both grown extensively in the florists' trade, and both are admirably decorative for the dwelling, besides being most enduring in foliage.

Dracenas in several species and varieties are also grown in quantity, the brightly colored varieties being especially in favor at Christmas time.

Morning Glories (5,500 Blooms) by A. S. Parker, Stoneham, Mass.

Crotons in many varieties find a ready sale on holidays, those with high colored leaves in which red, orange and yellow predominate being quite largely used in window decorations and plant baskets at that season.

Pandanus Veitchii is still grown extensively, and is more used than any other member of its family.

The dracenas, crotons and pandanus are all heat-loving plants, and with a rich soil and plenty of sun and moisture make rapid growth and develop rich coloring.

Brightly berried plants are in demand at Christmas, and for this purpose those most in favor are Ardisia crenulata, some of which are home grown, and some imported from Japan, and one or two species of solanums.

Insects and Insecticides.

Insects and the means with which to fight them are problems of interest to the commercial plant grower, and while progress has been made in this line, yet the perfect insecticide is still in the future. Probably the most satisfactory thus far are some of the nicotine preparations, the results from these having been better than the various soluble oil preparations. The latter are more likely to injure tender foliage than the nicotine when carefully used, but the disadvantage of the nicotine preparations is found in their high cost.

Fertilizers.

In the matter of fertilizers, the progressive plant grower is also frequently experimenting, for soils vary so greatly that it takes times to find out the needs of each. In palm growing, the best commercial fertilizer is one that contains a good proportion of phosphoric acid, but manures strong in nitrogen are also used to some extent, though an excessive use of the latter produces brittle stems and foliage.

Among the other plants briefly noted in this paper various manures are used, beginning with stable manure and running through bone dust, dried blood, spent hops, soot, nitrate of soda and others.

The Outlook.

The future of the plant trade in this country looks encouraging, for the garden is a youthful institution in our land as yet, and its pleasures and possibilities are only beginning to be realized; and while the proportion of profit to investment is probably less than in cut flower growing, yet there is abundant room for all the well-grown plants that are likely to be offered for some time to come.

AMONG THE GROWERS

Dailedouze Brothers, Flatbush, N. Y.

While the chrysanthemum season is not yet in full swing, the Dailedouze Brothers are now making regular daily cuttings from the earlier varieties, and the quality of the flowers they are sending to the market is fully up to that standard of excellence for which this firm has become noted on everything they cultivate. Any variety that becomes a standard at this establishment has to make good in every particular, as far as being a desirable commercial sort and a money-maker is concerned; varieties that are suitable for exhibition purposes only have no place here.

The stock throughout is in excellent shape, with not a bug or a dead leaf in sight. The list of varieties grown seems a very short one compared with the number of plants grown, but it is so carefully selected that failures are impossible, and each foot of bench space yields a profitable income.

In white sorts the following are grown in quantity: Polly Rose, Clementine Tousey, Alice Byron, Timothy Eaton, a sport from the same that is a reflexed flower and pure white; Beatrice May and white Maud Dean. Two new white ones are under trial—October Frost and Early Snow—but neither of them gives promise of great improvement over existing kinds. The former mentioned variety has about eight feet of stem, and not enough flower shows after so much effort. Of course, in other localities the result may be different.

In the yellow sorts, Merstham Yellow, Cheltoni, Robert Halliday and Monrovia are chiefly relied upon. In pink varieties, that old favorite, Marquis de Montmort, still holds first place for earliness and a grand crop has already been harvested. Rosiere, a fine, deep pink, is coming in along with the well-known Glory of the Pacific; and for a late pink, Maud Dean is still grown in quantity. Not much space is devoted to red sorts, only one variety, Intensity, sufficing for this color. Of the bronze sorts, two are grown—Kate Broomhead and Rustique, neither of them new, but tired and proven sorts that are the leaders in this class.

Several side benches in the chrysanthemum houses are planted with pompon varieties, which, when cut in sprays, will no doubt find a ready market, as they are particularly useful in many ways for cut flower decorations.

A Fine Aster Crop.

The illustrations show one of the aster fields of A. S. Parker, Stoneham, Mass., also a morning's cut before he starts for Boston market.

Mr. Parker makes a specialty of aster growing in the Summer time, and this year has been very successful, many of the finest branching asters seen in the Boston market having been grown by him. He does not raise many varieties but confines himself mostly to pink and white, these being what have been most sought after by his customers. J. W. DUNCAN.

Partial View of Aster Field, Containing Over 400,000 Plants, of A. S. Parker, Stoneham, Mass.

NEW SEEDLING CACTUS DAHLIA WM. H. RICHARDSON.—At the dahlia show of the Newport (R. I.) Horticultural Society, September 17, W. H. Richardson of New Bedford, Mass., exhibited a 1907 seedling cactus dahlia, which was so exceedingly fine, that the judges awarded it a silver medal. A committee of the New England Dahlia Society was present and voted to report as follows on the merits of the flower: "It is the most promising seedling introduced this year and if it keeps its present quality it cannot be surpassed either in America or Europe. The flower exceeded 6 inches in diameter with true cactus petals of a deep salmon, the center being primrose, veined salmon, the reflexed side of the outer petals being crimson."

Our London Letter.

By A. Hemsley.

THE NATIONAL ROSE SOCIETY.—The Autumn show of this society, which was held at the Royal Horticultural Society's hall on September 24, was in every way a great success. When the sun shone it was difficult to imagine that it was near the end of September, for the flowers were equal if not superior to those seen in July, and there was a large competition in most of the classes. It was of interest to note that roses seen good early in the year were equally valuable for Autumn flowering. Taking those used in the decorative classes, Mme. Abel Chatenay was a long way ahead of all others; out of nine tables decorated, four were done exclusively with this variety, and though the first prize went to a table which was decorated with Irish Elegance, Queen Mab and others of similar type, second and third were secured with Mme. Abel Chatenay. It was also used in the first prize exhibit for a bowl of roses and in other decorations it was extensively employed.

In white roses no other was so prominent as Frau Karl Druschki. The best red rose, or rather the most prominent, was Hugh Dickson. The new variety Avoca from Messrs. A. Dickson & Sons, Ireland, which gained the society's gold medal, is of perfect form, bright in color, and very sweet scented; it is a hybrid tea variety.

In the class for groups of pot plants and cut blooms combined arranged on the floor, Messrs. G. Paul & Son, Cheshunt secured the gold medal and first prize, but there were no other competitors. It is difficult to have good pot plants in the Autumn.

In the representative group of cut blooms on the stage, confined to 100 square feet, there was quite a large competition. All the exhibits were of high quality, and the judges found it a difficult task to decide which was the most meritorious. The first prize was given to Hobbies Ltd. (J. Green), Dereham, for a beautiful arrangement of good quality blooms.

For specimen blooms Scotland was a long way ahead, Messrs. Cocker & Sons securing first for the leading class (36 blooms distinct) also for 18 teas or noisettes, and for 12 vases 7 blooms in each. Messrs. D. & W. Croll, and Messrs. Adam & Craigmile, were other successful Scotch exhibitors.

It was rather a surprise to find that Madame Lamhard secured the silver medal for the best tea rose, yet it is a very old favorite. But it was a very fine bloom that was shown, and came from Messrs. J. Jefferies & Sons, Cirencester. La France of '89 was another which gained the distinction of a silver medal for the best bloom in the class.

Decorative classes arranged in vases are a feature at this show, and the exhibit by Messrs. F. Cant & Company, Colchester, was well worthy of the first prize. J. Mattock, Oxford, who came second, had a fine exhibit.

There were many good displays of specimen blooms shown in the orthodox boxes in tubes, but year by year we get more shown in vases. This is decidedly the best method of exhibiting the value for decoration, and it seems likely that in the near future the blooms shown in tubes in boxes will be a thing of the past.

CHRYSANTHEMUMS.—At the first committee meeting of the season three varieties gained first class certificates as early flowering decorative sorts, but I want to see more of them before saying that they are much in advance of those already known. Two were yellows, but as I have seen Carrie in the market I should prefer it to either. Well's Scarlet may prove useful, the color being very good.

In the market the best varieties I have noticed, include Cranfield, pink; Miss Barbara Millar, yellow; Mrs. Beech, bronze; Countess and Mercedes, whites. Soleil d'Octobre is already in. The best white for pots has been Lady Fitzwygram. I saw a very pretty unnamed seedling at H. J. Jones's nursery a few days ago; and I think we shall hear more of this later on.

DAHLIAS.—With many growers dahlias were very late this season, and some of the most promising seedlings were cut off by frost before they were fully developed. I have taken notes of new sorts and will comment on them in a future letter, after the next committee meeting when the R. H. S. and the dahlia societies will have a joint meeting. Some growers may be able to show good blooms, but those in low lying districts have lost a chance of exhibiting. It is curious to note the effects of frost; some dahlias have not suffered, while others in close proximity are black.

Chrysanthemum Golden Glow.

This variety was planted May 15, crown bud taken July 1, developed blooms in fit condition to cut August 20, 6 inches in diameter, and were shown before the S. A. F. Convention at Philadelphia. Later buds developed blooms that were shown before the C. S. A. committee at Cincinnati, on September 7, and scored 90 points, commercial scale. Height 3 feet from crowns, 4 feet from terminals; ideal growth; Japanese incurved form; of very easy culture. We consider this the very earliest, large flowering chrysanthemum to date. Adrian, Mich. NATHAN SMITH & SON.

Leaf Spot on Chrysanthemums.

This disease is causing considerable alarm in England, where it is designated as being new. In this country it has been known for some time. So far back as 1891 it was figured and described by Dr. Halstead in the Report of the Botanical Department of the New Jersey Agricultural College Experiment Station, and by Professor Beach of the New York Experiment Station at Geneva, N. Y.; it was also dealt with in Bulletin 121 of the Ohio Experiment Station, and is noted in the Report of the Maryland Horticultural Society, Vol. iv., 1902.

The disease can be recognized by the presence of more or less rounded spots of varying size on the upper surface of the leaf. These spots soon turn to a dark reddish brown, and these dark patches, which consist of diseased tissue, besides disfiguring the plant for ornamental purposes, render the leaves unable to carry on their proper functions; and the plant in consequence becomes weakened in vitality. When the fungus produces its fructification little black dots become visible scattered over the discolored areas of the leaf. The spores of the fungus

Chrysanthemum Golden Glow

Originators, Nathan Smith & Son, Adrian, Mich.

are produced in countless numbers from the inner surface of the fructification or "pycnidium," as it is called, and in damp weather may be seen escaping therefrom in hundreds.

Professor Beach recommends, after the removal and burning of the spotted leaves, to cover the remaining foliage with Bordeaux mixture. It is said that five or six applications will be sufficient to keep the foliage covered, especially if soap is used. The following formula for the Bordeaux mixture is given: Dissolve two pounds of copper sulphate (bluestone) in water, add whitewash made of one and a half pounds of fresh-slaked lime, and dilute to 22 gallons of water; then add enough soap to form a suds.

The Ohio Experiment Station advises for indoor treatment a copper sulphate solution (one pound to 50 gallons of water). More applications will be required, but the foliage will not be rendered so unsightly as with Bordeaux mixture, which, however, may be applied in full strength. The time here recommended for applying the fungicide is, first, about July 1, with a second application two weeks later, and similarly a third if necessary.

READ YOUR TRADE PAPER.—Every copy of a good trade journal hits the mark. It is bought because it means dollars and cents to the buyer; its contents refer directly to his work; it is not read for pastime or amusement, but because the information it contains is of practical, every-day use.—Produce News, Chicago, Ill.

New England Dahlia Society.

Secretary's Report.

Twelve months ago a long cherished idea of mine to form a dahlia society in America realized itself. In this very building the first meeting was held a year ago, when about twenty-five were present. That such a society could exist and progress was doubted by some of the most prominent growers in New England; notwithstanding, I had decided different opinions, and that my expectations have been realized puts it extremely mild. We have to-day a membership of 181; 161 have their dues paid up-to-date. This record stands singularly for the first year of life of any society, formed for similar purposes in America, and we can be proud of it. This increase is so much more singular as our existence so far has been through a period, when the interest for the dahlia is asleep, and the most promising future is still before us. Our membership is not at all confined to New England, as we have within our fold, members residing in the following states: Massachusetts, New York, Indiana, Rhode Island, Iowa, Connecticut, Wisconsin, Ohio, New Hampshire, Pennsylvania, Maryland, North Carolina, Colorado, Michigan, Idaho, Illinois, Minnesota, Maine.

And we go still further, for our influence has even reached Europe, where we have members in France, England, Holland and Guernsey. Inquiries during the year were received from China, Japan, Mexico, Brazil, India, Australia, Denmark, Italy and Germany.

That there was a necessity for a dahlia society cannot be questioned. Our purposes are manifold and we have perhaps in the first year of our existence not accomplished as much as might have been expected.

The several objects still to be accomplished are of the greatest importance and the deliberations of our committees have proven that we must go slowly, if our conclusions shall be final and not open to criticism.

All we have done during this first year is to disseminate information. The issuing of the Dahlia News was the most original work our society undertook and seems to help our society very much in gaining new members. The horticultural papers in America as well as Europe, devoted generous spaces in their news columns in mentioning the Dahlia News.

It may be of interest to show what it cost our society to publish this bulletin up to date; i. e. for the six entire issues:

For Printing,	\$71.95
For Stamps,	23.50
Total	\$95.25
As a return we have received for ads,	\$53.00
Balance,	\$42.25

Averaging our net cost about \$7.00 for each issue.

With an increase in membership, and a larger circulation, we should be able to receive more advertisements and this again would reduce the cost considerably.

Through the Dahlia News, the regular correspondence of our secretary has grown to considerable numbers each day.

For stationery and stamps outside of the Dahlia News, we have expended the sum of \$50.38. For stationery alone the invoices amounted to \$38.18. The amount of stationery used is sufficient proof that the secretary had plenty of work before him at any time.

Our financial returns were as follows:

For membership fees we have received up to date	\$163.20
For advertising in the Dahlia News	55.00
Voluntary contributions by J. B. La Vasseur, Hanover, N. H.	3.00
	\$221.20

We had further received for contributions for a prize fund, \$50 in cash, which were returned to the various contributors.

Our expenses were as follows.

Stationery and stamps,	\$50.38
Stamps for Dahlia News,	23.30
Printing of Dahlia News,	71.95
Total,	\$145.63

Leaving a net of \$75.57 which is in our treasury to-day.

Our executive committee met eight times since our formation, three times the necessary quorum was not present, so actually but five meetings took place.

A proper classification of the dahlia is very much wanted in America, and we hope that in the near future our society can offer such a classification that will be above criticism. Much remains yet for our committee to accomplish and I hope when another year has passed, we shall see the realization of some of the more important subjects before us.

Before concluding I wish to thank the brother officers, and the members of the executive committee for their advice and assistance at all times, and the generous response of all members to my appeals. Whatever little I have done has been accomplished only by this co-operation and I ask you kindly, to assist the next secretary all you can, make his work lighter, gather in new members and above all respond promptly to his appeals.

MAURICE FULD, Secretary.

AMERICAN ASSOCIATION OF NURSERYMEN.—The report of the thirty-second annual convention, held at Detroit, Mich., June 12-14, 1907, has been issued by Secretary Seager. It is one of the most valuable gotten out by the society. There is a complete stenographic account of the proceedings, and in addition are furnished a summary of the State laws regarding nursery stock, shippers' tables and a telegraphic code.

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail florist firms advertising under this heading will accept and fill orders for flowers and floral designs forwarded them by mail, telegraph or telephone, the usual commission of 25 per cent. being allowed.

\$25.00, payable quarterly in advance, will entitle the advertiser to a four-line card, under this heading, for one year, 52 insertions. For every line additional to four, \$5.00 will be charged. Four lines will average 32 words; each additional line, 9 words. Each advertiser receives one copy, free, of our Florists' Telegraph Code.

New York.

YOUNG & NUGENT, 42 West 28th St. We are in the theatre district and also have exceptional facilities for delivering flowers on outgoing steamers. Wire us your orders; they will receive prompt and careful attention.

MYER, 611 Madison Ave. My facilities for delivering flowers for any and all occasions are unexcelled. Can give prompt service to steamer and theatre trade. Telegraphic orders solicited. Telephone, 5297 Plaza.

Kansas City, Mo.

SAMUEL MURRAY, 1017 Broadway. I will deliver orders for flowers in Kansas City and vicinity promptly. A first-class stock of seasonable varieties of flowers always on hand. Wire me your orders.

Detroit, Mich.

JOHN BREITMEYER'S SONS, Broadway and Gratiot Avenue. We cover all Michigan points and large sections of Ohio, Indiana and Canada. Retail orders placed with us will receive careful attention.

Denver, Colo.

THE PARK FLORAL CO., 1706 Broadway, J. A. Valentine, Pres. Orders by wire or mail carefully filled; usual discounts allowed. Colorado, Utah, Western Nebraska and Wyoming points reached by express.

Cincinnati, O.

HARDESTY & CO., 150 East Fourth, sell the best grade of flowers grown. Retail orders from distant points for delivery in Cincinnati or surrounding territory will receive prompt attention. Telegraph us.

Dayton, O.

W. G. MATTHEWS, FLORIST, 16 West Third Street. Flowers in any arrangement for all occasions for Dayton and vicinity. Personal attention given to all orders. Long distance telephones.

Dallas, Texas.

LANG, THE FLOEIST, the largest flower store in the South. Floral designs and all flowers in season; personal supervision and prompt service in Oklahoma, Texas, Louisiana. Mail and telegraphic orders solicited.

Louisville, Ky.

JACOB SCHULZ, 644 4th Avenue. Personal attention given to out-of-town orders for Louisville and surrounding territory. Have a choice line of seasonable flowers always in stock; delivery facilities perfect.

Indianapolis, Ind.

BEETEMANN BROS. CO. Our facilities for executing orders in an efficient manner are unexcelled. Our shipping territory includes the surrounding states. High grade flowers; expert workmanship.

Albany, N. Y.

EYLES, 11 North Pearl Street, cut flowers or floral designs delivered to any part of Albany and vicinity on telegraphic order. Personal attention given and satisfaction guaranteed.

Chicago, Ill.

HAUSWIRTH, The Auditorium Florist, 232 Michigan Avenue. The quality of our work is of National repute, and we are prepared to execute commissions in first-class style in Chicago and its environs.

Retailers desiring a share of out of town trade should be represented by a card in this column.

FOR THE RETAILER

For reproduction on this page, we solicit from our readers engaged in the Retail Trade, good, clear photographs of subjects that are of general interest, such as store interiors, designs of different classes, new delivery wagons, etc.

Funeral Work.

A casket cover of orchids is always beautiful, and may be considered the highest attainment of the florist in the way of high-class funeral work, both as regards magnificence and cost. Arrangements of casket flowers are comparatively common in this "orchid age," when the blooms may be had at almost any time of the year by the hundred. But a pall made with the beautiful Autumn flowering Dendrobium Phalenopsis Schroederianum was the handsomest I have ever seen, the delicate sprays of this orchid and its great variety of exquisite shadings making it particularly adaptable for this class of work.

The frame, made of mosquito netting, was covered with a layer of common or fancy fern; over this was fastened a thick layer of Adiantum Croweanum. A six-foot cross of Bonvardia Humboldtii, with a cluster of lily of the valley at the arms extended the full length of the casket. A fringe of Dendrobium Phalenopsis, in the darker colors, was arranged around the edge of the cross; the various shades were employed to cover the remaining portions of the top and sides, the outer fringe around the extreme edge of the cover being finished with the lighter shades and a sprinkling of lily of the valley.

Prepared Magnolia Leaves.

The prepared magnolia leaves, both the green and bronze, are being largely employed for funeral work with very excellent results. The green leaves have a rich metallic luster, and wreaths made entirely with them are very handsome.

A large empire wreath made with Cypripedium tips and the green leaves, is very fine. The cypripedium tips radiate from a common center at the widest portion of the wreath, occupying about a third of the circumference, then the magnolia leaves are used to complete the circle; a large bow of purple ribbon finishes the design.

A Unique Design.

A large standing cross, made as follows, was something entirely new. The main body of the cross was filled in with small branches of the beautiful conifer Picea pungens glauca, or Koster's blue spruce, the base being done with larger branches of the same shrub, with a cluster of purple asters. A wreath of violets, made solid all around, was supported by the arms of the cross; this was tied with number sixty purple ribbon, the ends being left long enough to fall gracefully to the base, mingling with the asters. A piece of this kind, of course, means the sacrifice of a valuable plant, and could not be generally used, but the effect was most striking and well worth while.

Boxwood is commonly used for this purpose, and when used in combination with flowers, forms an agreeable change from galax and leucodermis sprays, which are decidedly overdone at present.

Dahlias in Decorations.

Dahlias are taking an important place in the flower markets of the larger centers and are being used in large numbers in New York every day. The cactus and single sorts are the most popular, some of them having remarkable lasting qualities, more especially the cactus varieties, which will keep a week in the ice box. The Twentieth Century varieties are most desirable for table work, the magnificent single blooms being very effective. A dinner decoration in which five hundred blooms of Pink Century were used produced a fine effect. The flowers were wired at the head, which is necessary, as the stalk immediately below the calyx is seldom strong enough to hold the flower in a satisfactory position for table work. Maidenhair fern was employed as an embellishment, the flowers being arranged in plateaux, some of the finer flowers being laid on the cloth with sprays of the same fern. The red and white varieties, make a grand combination for the table. I have seen some of the cactus dahlias used in table decorations, and also in funeral work, and they make up extremely well.

Tritoma Pfitzeri.

Tritoma Pfitzeri has been playing a prominent part in the window displays around the city this Fall and

it is surprising how few people outside of the florists themselves seem to know anything about this flower. It is doubtless a most striking subject, both as regards color and formation. It is splendid for window effects and can be used occasionally for table decorations, and with Autumn foliage is most effective.

D. RAYBUN.

ORNAMENTAL GRASSES.—In the protests, etc., of the Decorative Plant Company against the assessment of duty by the collector of customs at the port of New York, before Board 1, of the General Appraisers, September 25, 1907, merchandise, classified under paragraph 425, tariff act of 1897, relating to ornamental leaves, flowers, etc., was claimed by the importers to be dutiable under paragraph 449, relating to manufacture of grass, etc., or free of duty under paragraph 552, (palm leaf), paragraph 566 (crude, textile grasses, etc.), or paragraph 617 (crude vegetable substances).

The following opinion was rendered by McClelland, General Appraiser: * * * In the special reports accompanying the protests the appraiser states that the merchandise consists of "natural palm leaves" and "natural leaves dyed and prepared, suitable and used for ornamental purposes."

The record shows that protest 244324 covers cycas palm leaves dyed and prepared, and that protest 244325 covers grasses and ferns; and the testimony is limited to those items. The claim as to the ferns has been abandoned by counsel for importers. The grasses are described on the invoice as "Isolopis grass with seeds," shown by the evidence to be made of phoenix palm leaves split and dyed to resemble the natural color of isolopis

Flower Store of Jos. E. Cornell, Danbury, Conn.

grass. It is also shown by the testimony that the merchandise in question is either used in the condition imported, when placed in pots, for decorative purposes, or that it is combined with other materials for making artificial palm plants and when so made up are also used for decorative purposes. The evidence presented confirms rather than controverts the return of the appraiser both as to character and use of the leaves and grasses; and as the assessment of duty thereon is in harmony with former rulings of the Board and the courts on similar issues, the protests are overruled and the decision of the collector is affirmed in each case.

A Connecticut Flower Store.

Our illustration shows the flower store of Joseph E. Cornell, Danbury, Conn. Mr. Cornell, who is seen in the right of the picture, is still a young man, but he has succeeded in building up a good trade in his home town. He is a great believer in up-to-date store equipment, and in this respect follows Metropolitan methods closely.

Acting President Parsons of the Park Board plans to completely renovate Central Park, New York, and restore it to its former neatness and beauty if he can induce the Board of Estimate to grant him \$2,576,750, which is the sum he estimates will be required to do the work. He practically says that the park, not fitted for the modern wear and tear it has been subjected to, is worn out. Mr. Parsons' plan, as at present outlined, proposes among other things, expenditures of \$626,250 for mold; \$150,000 for manure; and \$75,000 for shrubbery and trees.

EVERLASTING FLOWERS.—During the half year of 1907 the total value of the everlasting flowers shipped from British South Africa was \$31,780 as against \$20,702 for the same period of 1906.

October 12, 1907

THE WEEK'S WORK.

Adiantum Farleyense.

Adiantum Farleyense is constantly growing in demand for high class decorative purposes, both in its growing state and in cut fronds, and although the number of plants now raised for commercial purposes is much larger than was the case a few years ago, the supply, at times, falls far short of the call, with the result that a good price is easily obtainable for both plants and fronds.

As is well known, this beautiful fern is increased by division of the roots and crown. It may be the case that in many establishments there are a number of medium sized plants which are potbound and these in such condition may reasonably appear as fit subjects for breaking up for the increase of stock; but instead of breaking up these plants immediately, if they are given a shift into pots or pans one size larger and afforded favorable conditions for growing, they will, in three or four weeks, send roots out into the fresh soil given them and will then be in far better condition for breaking up than when their roots were hardened through lack of space into which they could extend. The purpose for which plants of Adiantum Farleyense is intended should in a measure, at least, govern the propagator in his method. For instance, if the ultimate object be the production of large specimen plants, it will be attained if, in dividing, only single crowns are used; again, if the desired object is the rapid production of stocky little plants, such as florists are eagerly looking for, it will be much better if the stock plants are not so severely cut up and instead of one crown two or three may be put in the sand. In dividing into single crowns the result usually is that strong long-stemmed fronds go straight up, with succeeding growth of like character, until ultimately the grower has large plants and large fronds, both desirable for certain purposes. On the other hand, when two or three crowns are left when breaking up, the plants which result are, from the start, more stocky, and in much less time than the others make salable plants.

No matter to what extent stock plants of Adiantum Farleyense are divided, when breaking them up for multiplication, the portions after division should be put in good clean sand in the propagating bench where a good bottom heat is available. Shade of a temporary or movable character will be necessary to protect them from the bright sunlight. Sprinkling at regular intervals is essential to their success while in the sand.

Gardenias.

If the first batch of gardenias are rooted and ready for potting, they should not be left any longer in the sand. It will be found that the mortality among newly potted young gardenia plants will be much less if the plants, immediately they are potted, are placed in a closed case or frame and kept shaded for several days or until the roots of the plants get into good working order, when air in increased volume may be admitted until finally the sash of the case may, with advantage, be entirely dispensed with.

Cyclamens.

It is but rarely, if ever, anyone sees a well grown cyclamen left unsold in the hands of the dealer or on the premises of a grower; it is the other way with poorly grown cyclamen plants, just the same as it is in the case of everything of inferior quality. From now on cyclamen will require not only constant attention but also the exercise of all the skill of whoever has them in charge. The plants should be placed as near the glass as possible and exposed to the full sunlight. In finishing cyclamens it is very important that the plants are given ample room in order that they may assume their full proportions in fullness of foliage and generous make up. Inverted pots are very serviceable as stands for the potted cyclamens at this stage of their growth.

Careful watering is now as much a necessity, if not more so, than at any

previous period of their growth. Plants now sending up buds will be in good condition at Christmas, if from now on a slightly higher temperature is given them—about 58 degrees suits them. Greenly will have to be kept down at all costs; renew the tobacco stems strewn among the pots at frequent intervals.

Hydrangeas.

There is no questioning the soundness of the advice given to the growers of hydrangeas, that the safest method of storing the plants used for outdoor decoration in Summer is that of placing them in frost-proof sheds or cellars; this method answers the purpose admirably when the plants to be preserved for future use are either in tubs or planted in beds or borders of modest dimensions, but when we come to take care of large specimens difficulties arise in various forms if an attempt is made to lift them out of the ground and put them indoors for the Winter. When it is known that such large plants can with perfect safety be left outdoors and the method practiced for their protection explained, that same method may, perhaps, become more general than it now is in practice. When the first frost makes its appearance the plants should undergo the operation of having all the leaves stripped off, and when that is completed all the branches should be tightly brought together by being tied with stout twine, forming each tied up plant into a pyramid. Then four stout stakes should be driven firmly into the ground and on three sides boards securely nailed up to the level of the tops of the stakes; one side must be left partly unboarded in order that soil may be carefully thrown in, which should be immediately done. And just as the filling in of the soil proceeds the completion of the enclosure should also proceed until the last board is on the fourth side and the work of filling finished with nothing more to do but the nailing on of the top cover. In the event of a long continuous row of plants requiring to be protected in like manner as the foregoing, they may be preserved in good shape without the use of boards, except in so far as boards would be an advantage in keeping the soil used in covering them in place when the rains of Winter persist in washing it away.

For the latter plants the method adopted is that of stripping the plants of their foliage, just as is required for the others, then a start is made with the plants at one end of the row. The branches of the first are tied down to those of the next and the operation repeated until all are thus treated, with the exception of the last, the branches of which are made fast to a stub driven in the ground. Similar stubs may also be used to tie branches of the others to if there may be any objection to tying them to the plants. A covering of sods will next be in order, with a final covering of about eighteen inches of soil. The soil is not an absolute necessity, but it will be found to greatly simplify matters in Spring when the work of uncovering is in order.

Storing Plants, Bulbs and Roots.

There is no longer any guarantee for the safety of perishable plants, bulbs or roots outdoors and in the absence of it there should be no delay in removing all such material to places of perfect safety or to places where means of temporary protection can, with short notice, be put to use. Dahlias should be dug up on the approach of frost and the tops cut off to within a few inches of the tubers, which should be immediately placed in some dry, airy place to get the soil still adhering to them in condition to be easily removed. When that is accomplished and every label securely fastened to the remaining portion of the stem, the tubers may be put away for the Winter, on shelves, in a frost-proof cellar or on the floor of the same but having a previous light covering of dry soil; or each variety or block may be placed in boxes or barrels and stored in frost-proof, cool cellars or in sheds or lofts, where like conditions will with certainty prevail during the entire Winter.

Cannas may be cut down preparatory to storing, much in the same manner as directed for dahlias, and the com-

mon cannas may be stored for the Winter in like manner also. I have found it much more satisfactory to have these canna roots in a rather dry atmosphere, but taking care that in lat Winter or very early Spring the temperature of their quarters was not high enough to excite premature growth. The varieties known commonly as French cannas need a little more care in their disposition for the Winter than the common ones, and for that reason it will be well to leave the tops on them when digging them up, but removing the top growth just as they are stored away, which should be done with the major portion of the soil adhering to them at the time of their removal from the ground, still around them. Very little frost will play havoc with even the common cannas, and in the case of choice flowering varieties it would seem to be good business policy to use more than ordinary vigilance in order that they may survive the Winter unharmed.

Tuberous rooted begonias should be lifted out of the ground immediately if they have not been already attended to. When the tops are shriveled and rubbed off the bulbs should be placed in shallow flats which have been previously covered on the bottoms with an inch or so of dry sand or soil, the bulbs then placed over that material, and then a light covering of the same material in like condition thrown over them placing the flats in a dry and moderately warm place, such as a potting shed left, for the Winter.

Lemon Verbena.

A few large plants of lemon verbena planted outdoors during the Summer have doubtless been the source of considerable income to retail florists and growers, besides being exceedingly handy on many occasions when nothing else in the way of green would answer the same purpose so effectively. Lemon verbenas can be stored for the Winter in a cellar or shed where frost does not penetrate; they can also be kept in a greenhouse, but they will give better results next Summer if they are kept during the Winter in a dormant state.

Adiantum Cuneatum.

Plants of Adiantum cuneatum not needed for Winter use, but which may be of service next Summer, may now have water gradually withheld from them until they ripen, so to speak, to such an extent that their fronds will wither, when they may be stored away below greenhouse benches, laying the pots down on their sides in order to keep water from reaching the roots. They can be left in that condition until the time arrives when it will be prudent to excite them into growth for the production of another crop of fronds.

Propagating in General.

Now that heat is available for the purpose of propagating, no time should be lost in making a start in the work of increasing the stock of every kind of decorative plant that the needs of the trade make it imperative, should be on hand in considerable quantities. There may be large numbers of good cuttings of Pandanus Veitchii now available on old plants, and if there

are there is no reason why they should not be taken off immediately and placed in the sand to root. Dracana Godseffiana in small plants are very acceptable for the filling of dishes and the like; cuttings taken off the tops of the branches of that dracena root readily in sand, and as it is a fact that during their early stages, plants of this dracena are rather slow of growth, the sooner the cuttings are in the sand the better. D. M.

Illinois State Florists' Association.

The Illinois State Florists' Association will hold its third annual convention in Springfield, Ill., on February next, 1908. This will be the greatest convention of the florist and kindred trades that has ever been held in the State of Illinois. Already many inquiries have been made regarding space for trade exhibits.

The undersigned committee appointed by the Springfield Florists' Club to look up the matter of exhibits takes this opportunity to issue this circular to all interested, and asks them to send in their wants. We can give you all the space you want, whether it be for advertising, banners to hang up or space on the floor, for any and all kinds of exhibits belonging to the trade, and ask your hearty co-operation in making this convention a record-breaker.

Springfield, the capital city of Illinois, is located in the center of the State and will be visited by all florists of this, as well as many other states. Springfield is also famous for its horticultural products, no less than eighteen firms being engaged in the growing of cut flowers, plants and vegetables.

This being the center of the State and its easy access by steam and interurban railroads assures us of a great many of the trade being with us, thus showing what a factor this convention will be from an advertising point of view.

Hotel accommodations are unexcelled; plenty of room for all at moderate prices. The exhibition and convention will be held in the State Armory, with a floor space of thirty thousand square feet, with a large gallery surrounding the entire building, fully heated, and the exhibitors need have no fear in sending their choicest stock of cut flowers and plants.

Exhibits coming from a distance, and exhibitors not being able to accompany them, will be well taken care of by the local club.

We especially urge upon all supply men and dealers in greenhouse building and heating material to let us know at once what space they will want, so that we can arrange exhibits to the best advantage.

We will be able to give good space at reasonable rates, which will be furnished on application.

Now, florists, this is your opportunity; come and be with us; we will give you a good time.

Springfield, the home of Lincoln, will give you a hearty welcome and you will all say that it is good to be one of us.

Address all communications to the secretary of the Springfield Florists' Club, George W. Jack, 217 South Fifth street, Springfield, Ill.

David Worth,
Committee { Frank Friedly,
Albert T. Hey.

Growing the "Shamrock."

There is always a good demand for the "shamrock" on Irishman's Day, March 17, and there are a few growers

who make a specialty of these plants. Among these is John F. Rupp, Shiremanstown, Pa., who kindly supplied the plant from which our illustration herewith presented is made, and also furnished the subjoined cultural pointers:

The seed is sown at intervals from October 15 to December 1, in shallow flats. As soon as the seedlings are large enough to handle they are transplanted into 2-inch pots, using a good soil, and grown in an ordinary greenhouse temperature. So treated, they are strong and fine by March 17.

"Shamrock," as Grown by John F. Rupp

New York.

News of The Week.

The regular meeting of the New York Florists' Club will take place on Monday evening next, October 14, in the club's rooms, which are located in the Murray Hill Lyceum, 160 and 164 East Thirty-fourth street. At this meeting G. V. Nash of the New York Botanical Garden will give an illustrated lecture on water lilies, and all members may rest assured that a treat is in store for them, as this lecture is a most interesting one, and the stereopticon views to be shown in connection with it are very fine in every particular. In addition to the lecture, there is a change in the by-laws to be voted upon, and it is also expected that some exhibits of novelties in flowers will be made.

The New York and New Jersey Plant Growers' Association is working strenuously to enlist the membership of every plant grower who supplies this market. Now that the plant growers of the community have become incorporated and are trying to work together for the benefit of each other, there is quite a little talk in the wholesale district about an organization on lines similar to those of the plant growers for mutual benefit, particularly in regard to the credit system. It is believed by some that the system of giving credit at present in vogue is not by any means what ought to obtain in a business such as the florist business is, and if it were possible to make some arrangements whereby a regular clearing day could be brought about, it would be of great benefit, not alone to the wholesalers, but to the retailers as well. As one dealer remarked this week, "The time has come when something must be done along this line, and if no other method can be arrived at whereby an organization of wholesale dealers can be arranged, I will make a call for a meeting myself and endeavor to bring about the desired object." It will be remembered that some months ago the trade in Philadelphia effected an organization, but, for some reason or other, nothing further was heard of it. Whether or not the New York wholesalers will be able to accomplish anything along these lines remains to be seen.

William Elliott & Sons, 201 Fulton street, are conducting their plant auction sales twice a week and are disposing of immense quantities of stock.

Cleary's Horticultural Company is the name of a new incorporation that will deal in plants, bulbs, etc., at 62 Vesey street, and during the seasons will hold auction sales on Tuesday and Friday of each week, with Ambrose T. Cleary as auctioneer. Their sales commenced on Tuesday, the 8th inst.

The International Conference on Plant Hardiness and Acclimatization of the Horticultural Society of New York opened on Tuesday, October 1, in the rooms of the American Institute, West Forty-fourth street. Botanical students from all parts of the United States and Canada were present. A visit was made to the Bronx Botanical Garden, and papers were read by various experts in the Museum Building. The conference lasted three days.

Edward Seery, retail florist of Patterson, N. J., has been successful in having Archie Graham, a well-known society man, indicted by the Passaic County Grand Jury for assault and battery. The indictment is the sequel to the trouble which occurred several months ago in the Hamilton Club, when, for some unknown reason, Mr. Seery, who was accompanied by a party of ladies, was attacked by Graham.

Frank Hamilton, landscape gardener, is at Westerly, R. I., superintending the making of the new Wilcox Park.

Wenz & Kohnke, retail florists, who for some time have been located at 67 East Tenth street, have moved to more commodious quarters at 61 Fifth avenue, corner Thirtieth street, where they have greatly enlarged facilities for meeting the wants of their customers.

We are glad to report that the condition of W. F. Sheridan, who underwent an operation for appendicitis on Wednesday, October 2, is very much improved, and his speedy recovery is looked for.

Some of the best American Beauty roses coming to New York just now are

from the greenhouses of John Young Company, Bedford Station, N. Y.

The marriage of Miss Boldt, daughter of the proprietor of the Waldorf-Astoria Hotel, this week, called for very elaborate floral decorations, both at the hotel named and at St. Thomas' church where the ceremony was performed. J. H. Small & Sons had charge of the entire floral work, and it goes without saying that it was a first-class job in every particular. A large number of chrysanthemums were used.

Visitors in town this week included Benjamin F. Dorrance, Dorranceton, Pa., and Oscar Schultz, Newport, R. I.

Mrs. W. H. Kuebler, wife of the well-known wholesale florist of Brooklyn, N. Y., died recently at the age of 35 years, and was interred in Evergreen Cemetery. Besides her husband, she leaves to mourn her loss two small children, a boy and a girl.

A young son of David Deans, Astoria, N. Y., has just undergone a painful operation, he having had his arm and shoulder blade removed, on account of a cancerous growth. The poor lad is now in a very precarious condition.

"The Broadway Florist," at 1010

St. Louis, Mo.

We had with us the past week, E. Fancourt of S. S. Pennock-Meehan Company, Philadelphia. S. Wertheimer of New York and C. J. Ford of Philadelphia both enjoyed their visit, as they saw President Roosevelt, the Veiled Prophets and carnival week. All report good business.

Max Herzog, who was formerly in the greenhouse business at Gratiot station and sold out to the railroad company at a good price, has now charge of the greenhouses at the Female Hospital.

Adolph Brix is making preparations for his floral exhibition next month, which will be given at the Y. M. C. A. hall, Nineteenth and St. Louis avenue, October 7, 8 and 9. This will be free to the public. Handsome invitation cards are now being printed. Mr. Brix was in Springfield, last week, looking over the floral exhibit and buying a number of plants.

Gus Eggeling furnished the floral decorations for the dinner to President Roosevelt at the Jefferson Hotel last week. They were much admired.

Mrs. William Ellison of the Ellison Floral Company, who got home from her Northern Summer vacation trip last week, reports a number of large wedding orders.

Fred H. Weber has his Maryland avenue store looking fine, with many fine decorative plants which he purchased while East this Summer, and reports a good trade.

Beyer Brothers are receiving a large importation of bulbs. Some 20,000 are being potted up for their holiday trade. They will also have a fine lot of chrysanthemum plants in pots for the local trade.

ST. PATRICK.

Kalamazoo, Mich.

Trade News.

Two weeks of almost continuous rain has not helped to increase the volume of business, which may be said at present to be very slow. Frost sufficient to destroy the value of outside cut flowers occurred on the night of September 23 and from now on the demand for indoor stock will increase. At present, with the possible exception of tea roses, the market is bare, but the early chrysanthemums will soon appear and with them some snap to business.

The miserable weather has been a drawback to carnations, and as these were generally housed rather small will have the effect of still further delaying the early crop which would come in rather useful now. The carnation Windsor is now establishing itself in the winter quarters, and from first appearances looks to me as being decidedly overrated as to size, habit, and color, although I admit its fragrance, is especially good.

In reference to the excessive crop of asters this season my experience teaches me it is a good crop to let the other fellow handle, as personally I have found potatoes to be a far more profitable crop than asters, although the quality of the latter were all that could be asked, and I never had better flowers or worse prices.

George Allard, of Lawton, was in town yesterday buying carnation plants. He says the grape crop there is short, indeed almost a failure. He expects his florist business, however, to maintain its average and reports the past year's trade most satisfactory.

James Fraser was recently in Milwaukee, representing this State as delegate to the National Order of the Eastern Star. This season Mr. Fraser is trying the indoor system of growing his carnations, and so far is satisfied with the results. S. B.

RICHMOND, VA.—The city attorney's opinion in the case of Florist Hooper, to whom the markets committee sold for \$50 a stand in Sixth street, adjacent to the Second market, has been received by the committee. It will be formally received and considered at a meeting to be held in a few days. It is understood that City Attorney Pollard has advised the committee that they have no right to sell locations in the street adjoining the market house while any stall or stand in the market remains unoccupied.

The complications now existing grew out of a complaint made some time ago by another florist against Mr. Hooper. Both sell flowers and potted plants in the street near the market.

It was a custom long observed that the choice position fell to the earliest dealer to arrive in the morning with his stock. Finding it inconvenient to make the race each morning with other dealers who sought the best places for the display of their flowers, Mr. Hooper offered the markets committee \$50 for the most coveted position on the sidewalk and the bid was accepted. His competitors in the business protested and the matter was taken up for inquiry by the committee. The point was raised that an old ordinance forbids the committee to sell stands outside the market house until every stand and stall in the building is taken.

Then the committee called on the city attorney to define their powers. The opinion of Mr. Pollard, it is said, sustains the objection. It is probable, however, that the committee will ask the council to amend the ordinance so as to give them the right to dispose of sidewalk space adjacent to the market regardless of the vacant stands in the building. There are several undesirable stands in remote corners of the market for which it is impossible to get tenants and under the ordinance these vacancies prevent the committee from obtaining good revenue from the sidewalk stands.

Philadelphians at Vincent Dahlia Farm

Photo by E. Lautenschlager, September 17, 1907

Broadway, Brooklyn, N. Y., has opened a branch store at 630 Fulton street.

James Morton, formerly with W. A. Manda, as traveling representative, is now with Arthur T. Boddington in a similar capacity. He commenced his new duties this week.

Cincinnati.

News Items.

The writer was in Dayton, O., for a few hours Sunday, and incidentally called on the Advance Floral Company. C. M. Shaffer, manager of this concern, bought Harry Altick's greenhouses and had same transferred to his own ground on West Third street, where he has now erected about ten thousand feet of glass. Three benches of chrysanthemums are in good condition, also one bench of smilax, and he has one bench devoted to young stock ferns. The balance of his place is planted in carnations, and he will also force considerable bulbous stock, such as lilies, etc.

Harry Altick, while still a florist at heart, is manufacturing a patent window card fastener of his own invention. There are millions of them used, and I hope there will be millions in it for Harry.

There is nothing of particular importance to report from the Cincinnati end. Our callers during the week were Sidney Wertheimer of New York and Paul Berkowitz from the City of Brotherly Love.

Everybody is busy, and I look for a good year's business, but we do need more good flowers to sell.

J. A. Peterson and wife returned home Sunday evening after an extended trip abroad, and while having had a delightful trip, they were glad to get back home. Mr. Peterson says he saw nothing new or startling in plant creations.

E. G. G.

The Planters' Hotel for the same occasion was handsomely decorated by the Riessen Floral Company.

George T. Powell of Ghent, N. Y., president of the Agricultural Experts' Association, will address fruit growers and others who are interested in protecting their trees from the dreaded San Jose scale and other orchard insect pests, in Clayton, Mo., at 8 p. m., Saturday, October 12. The address will be delivered in the St. Ferdinand Farmers' Club Hall. Mr. Powell came here at the request of Frank H. Weber of the H. J. Weber & Sons Nursery Company. Mr. Weber reports that he will also have present Leonard Hastman, who is assistant entomologist at the Agricultural College of Missouri. Invitations have been sent out to all interested, and a large attendance is expected.

Fred C. Weber, the Bentzen Floral Company and Grimm & Gorley represented themselves in the Lable parade in the shape of handsomely decorated wagons, which were much admired by the great crowd along the route.

A meeting of the trustees of the Florists' Club will be held after the club meeting this week to arrange for social gatherings and an entertainment and ball for this Winter.

Henry Ostertag of Ostertag Brothers reports that they had the decorations at the recent street fair at Hot Springs, Ark. Harry Rieman represented them in designing the work.

The boiler explosion at the Kellogg greenhouses at Pleasant Hill, Mo., resulting in damage of \$35,000, according to the daily papers of Friday last, caused general regret among the trade here, who hope the loss is not as large as reported.

Mrs. M. M. Ayers and Miss M. S. Newman have two of the newest designs in delivery wagons; both have made many new and extensive changes at their stores.

CANADIAN NEWS

OTTAWA, ONT.—No frost as yet, September 22; rather unusual here, but the temperature at night is fast getting down to it. Carnations are housed with the exception of Wright's and he is hardly ready yet, as they go into his new range—some 25,000.

Scrim is cutting good Mrs. Lawson and Enchantress, also Beacon; these are all grown inside. Beacon has done remarkably well planted in, and is a fine flower, the color being very good. Winsor, inside, is now in bloom; Graham Brothers have a fine even lot all from the field. Roses are looking very well and some are now in good flower, and in demand. Some few violets are also being picked. Asters are still plentiful and very useful; they have been good round Ottawa this year. Boston ferns and palms are selling very well notwithstanding the high price of the latter.

The Central Canada exhibition has just closed. The plant display was hardly up to the mark. The government greenhouses, Scrim and McCann were the largest winners. The display of cut flowers was very good, especially sweet peas, asters and gladioli. The prizes were mostly taken by amateurs.

G. Robinson and G. Tressel from Montreal were the judges and gave good satisfaction.

The Ottawa Horticultural Society's September Show was the best ever held here. This is now the largest society in Canada.

LONDON, ONT.—Business the last week has been very poor, owing to the cold and wet weather.

At the Western Fair held here in September, J. Gammage & Sons cleaned up very nearly all the first prizes. J. H. Taylor, a new exhibitor, staged some very fine displays and some good design work. Gammage put up a very fine gates ajar; it was made up of carnations, roses, album and ruhruu lilies and lily of the valley, with a dove resting in the center on top. The design was about 3 feet square and it rested on a mat of galax leaves about 2 by 5 feet.

About 25 florists visited here from surrounding towns during fair week. An exhibit of Nephrolepis Amerophili put up by Gammage, was one of the most attractive displays in the hall; the public seemed to fairly rave over it.

Roses and carnations are coming in in fair quantity, but hardly enough to meet the demand.

Bulbs have arrived and are in fine shape.

MONTREAL.—The weather has turned quite cool, and although we have not had any hard frost, garden flowers are about over. Strange to say, dahlias are not grown here, the lasting qualities of this flower being much against it in this city. Montrealeers, as a rule, require a flower to last almost a week, and no matter how beautiful it is, it is often passed over in favor of the aster, gladiolus, etc.

Chrysanthemums are appearing in larger numbers and they clean up well. Enchantress is the only variety among carnations that any money can be made on so far. The most notable flower coming in here is lily of the valley, shipped by the Dale Estate of Brampton, Ont.; the stems average about twelve inches and carry 12 to 16 bells.

Ed. Gerney, formerly in the retail business, has announced that he will open up October 1 on Cathedral street to sell at wholesale. He says he will handle the output of 150,000 feet of glass.

TORONTO.—Business is again picking up, and there are indications of a good trade this Winter. The demand for both cut flowers and plants is fairly good. There have been quite a number of weddings lately, and funeral work has been fairly plentiful. Roses are coming in freely now, and the quality is good for the season. Violets have been plentiful, but the demand is about equal to the supply. American Beauty roses are a little short. Chrysanthemums are offered and generally sell well. There are a few good asters around, al-

so some very good dahlias and gladioli, but most of the outdoor flowers look weary. We have not as yet had any frost hard enough to cut coleus, and many of the tropical beds around town look very well. A bed of tuberous begonias in Queen's Park is a beautiful show; it is right in the open sunshine. Mr. Chambers says that the secret of success with these plants here is to have the soil right in the bed and to plant the begonias early in June, small plants just showing their first flowers. He says that when the plants are too far advanced before planting, they seldom make good progress afterward.

Arrangements for our fruit and chrysanthemum show are in good shape, and the program and prize list will be out this week. The indications are that it will be an exceptionally fine exhibition. There will be a large number of the craft from our other cities and towns, and any one having sterling novelties should show them, for there is a good chance for business at that time.

Albert Houle, manager of the Bedford Park Floral Company, has his houses in fine shape now, and all his stock is looking well.

W. J. Lawrence also has his stock in good shape, his roses and chrysanthemums being very good. He is building a new stable and making considerable improvements on his place.

John H. Dunlop has finished his new block of houses, and they are said to be the lightest in the Dominion; his stock is a little backward, but very promising for a splendid crop later on.

When we have seen accounts of some of your gardeners in public places being moved for political reasons, we have said, "We are not like other folks; we don't do such things here." But now we have to take it all back, for Joseph Graham, who has been in the employ of the Ontario Government for over twenty-five years, and has been for several years gardener at the Government House here, a practical gardener and a general favorite in the profession, has been removed without any fault being found with him, to make way for a party who has really no practical qualifications for the position; much indignation is expressed by all the members of the profession who have been here long enough to know the parties.

FACTS

If you wish to be cock of the walk,
If you'd like to hear the town talk
Of the plants that you sell;
Why you know very well,
If they're Aschmann's, no buyer
will balk.

I always act as quick as I think, and have been successful; learn and do likewise.

ARAUCARIAS OUR SPECIALTY
WATCH US GROW

1907 is our 12th anniversary in a successful career in the importation, growing and shipping of this well-known and so much admired evergreen, decorative plant, Araucaria Excelsa, Robusta, Compacta and the Excelsa Glauca.

Our importation this Spring, 1907, has swollen up to the enormous number of 6,000; more are coming with the azaleas in September and October. The florists of every city from the Atlantic to the Pacific Ocean can talk of Aschmann's Araucarias.

Now is the time to buy. They will gain in their growth 100 per cent. in two or three months.

The next in rank is our Nephrolepis Ferns, of which we only grow the best selling and well-known varieties, and of which we have a big lot: Boston, Elegansissima, Whitman and Scottii, three large houses full, in best selling sizes, all pot grown (not bench grown).

Our ferns are not forced or grown in shady houses, but grown exposed to the sun, ventilators are open day and night. Such treatment stiffens the fronds, and makes strong, stout plants, that can be shipped 6,000 miles safely without injury to the plants in transportation.

ARAUCARIA EXCELSA, 5 to 6½ in. pots, 10-12 to 14 in. high, 3 to 4 tiers, 2 years old, 50c. each. Larger sizes, 6½ to 6 in. pots, 2-3-4 years old, 3-4-5 tiers, 60c.-75c.-\$1.00 to \$1.25 each.

ARAUCARIA Compacta Robusta, 6 in. pots, 2-3-4 years old, 10-12-15 to 18 inches high, 3 to 4 tiers, \$1.50-\$1.75 to \$2.00 each.

ARAUCARIA Glauca, 3-4-5 tiers, 2-3-4 years old, 10-12-16 to 20 in. high, 6 in. pots, \$1.00-\$1.25-\$1.50-\$1.75 to \$2.00 each.

LATANIA Borbonica, 25c. each.

KENTIA Forsteriana and Belmoreana, European stock, 6 in. pots, 26 to 30 in. high, five leaves, \$1.00 to \$1.25 each; 4 in. pots, 18 to 20 in. high, 35c. each.

GODFREY ASCHMANN

Importer, Wholesale Grower and Shipper of Pot Plants

GROWERS OF CHRYSANTHEMUMS WHO HAVE MORE STOCK PLANTS THAN THEY NEED, WILL FIND A READY SALE FOR THEM BY PLACING AN ADVERTISEMENT IN THE FLORISTS' EXCHANGE.

Thirty cents is the minimum charge for advertisements on this page.

Famous Trees Marked for Axe.

Famous trees in the Botanical Gardens, Washington, D. C., are marked for the axe to make room for the erection of a new statue of General Grant, and a movement has been started to save the oaks, elms and other beautiful trees planted by statesmen of a half century ago. Destruction of these trees is pronounced by the Washington Evening Star as the entering wedge for the "creation of a mock Versailles in place of an American pleasaunce" in the Mall which is to be the axis of the "beautified Washington," as planned by the Park Commission.

The agitation now begun is directed against the Park Commission, whose plans have received the cordial indorsement of the President. The Grant statue commission chose a site for the statue at the eastern end of the gardens, directly in front of the main gate.

When workmen were sent to stake off the location they were kept out of the gardens by William R. Smith, superintendent, who pointed out that the plans would require the destruction of a tree planted by Senator Howard, of Michigan; a mighty oak planted in 1863 by Senator Crittenden, of Kentucky; an elm, which has grown to large proportions from a slip from a tree planted by George Washington, and an elm planted by "Boss" Shepard, once Governor of the District of Columbia, who made possible the beautiful Washington of today. Acorns from the Crittenden oak have been sent all over the United States, and it is the father of thousands of stately trees throughout the country.

Mr. Smith suggested that if a change of ten feet be made in the location of the statue the trees could be saved, but Lieutenant Poole, Acting Superintendent of Public Buildings and Grounds, said he did not have authority to change his orders.

Objectors to this plan see even greater changes looming ahead. It is pointed out that the plan of the Park Commission for the improvement of the city requires that the vista, which now begins at the east end of the Botanical Gardens and ends somewhat north of the Washington Monument, must be swung around to extend to the monument. Then, to meet the geometrical ideas of the commission, not only long rows of trees, but the Smithsonian Institution and the buildings of the Botanical Gardens must be removed.

Unless present orders are changed, the trees in the Botanical Gardens were to be felled on Monday.—N. Y. Herald.

Baltimore.**News Items.**

Extensive preparations are making for Old Home Week, the decorations being more artistic and more general than on previous occasions. On Sunday, October 13, the festivities begin with a great concert given by the United Singers of Baltimore, together with a fine band, in Druid Hall Park. On the following day the old Baltimore world's champion baseball team commences a series of games against the present world-beats. Municipal, civic, military and electric parades with hundreds of floats, a bombardment of old Fort McHenry by four United States warships, and a great general carnival are some of the most prominent attractions.

It is expected that large quantities of greens and cut flowers will be used, and it is hoped Jack Frost will stay away long enough to give the florists a chance on outdoor cut flowers; so far they have not been touched, only a very few high points have been but slightly visited by white frosts.

Among the artistic floats and such that especially appeal to the florists are: The fernery, the bower of the rose, Summer, Fall or Autumn golden rod, violet and wistaria, Spring, lily blossoms, Maryland daisies, dahlia, etc. The Baltimore Gardeners' Club contemplates having a decorated float on some conveyance for strewing gratis thousands of flowers to the people.

C. L. SEYBOLD.

Allenhurst, N. J.

Ralston Brothers in addition to their extensive range of glass have a fine collection of perennials and nursery stock in all the ornamental sorts both evergreen and deciduous. Landscape gardening is carried on to quite an extent by these gentlemen, several good contracts having been closed for new work to be completed for next season.

This firm has a new tree moving machine of its own invention that has been used for a short time with great satisfaction. It is the embodiment of numerous ideas. Huge balls of earth can be retained in transplanting full grown trees, which can be lifted with the greatest ease and lowered into their growing quarters without much apparent trouble. A pair of horses and a few men could do much transplanting with this machine in a very short time.

Boxwoods, bay trees, and hydrangeas are used extensively by these people and rented to the tenants of the Summer cottages along the beach. A commodious house for the storage of these plants is also one of the features of this establishment. J. M.

Elberon, N. J.

William Bryan is erecting a house for the storage of bay trees, boxwoods and hydrangeas. The housing of this class of plants along the coast has for some time been a difficult problem. No one in the vicinity had sufficient glass available for this purpose, and plants had to be kept in barns and outbuildings much to the detriment of their beauty for the Summer season. Large hydrangeas in tubs are used without stint by the owners of Summer cottages, hotels and in fact every dwelling along the coast. Considerable of this stock belongs to the florists who rent it for the season to the cottage owners. It is profitable stock to handle in that section, as the rental price for a single season is fully up to the entire value of the plant. It is better to rent than to sell, as a cheap house with ordinary board sidewalks and a few sash worked into the roof for light and a limited number of steam pipes to be used in severe weather, are all that is required to bring this stock in good shape through a New Jersey Winter. J. M.

NATHAN SMITH & SON, ADRIAN, MICH.**Field Grown Carnation Plants
SPECIAL OFFER**

In order to close out we will sell any or all of the following varieties at \$4.00 per 100; \$35.00 per 1,000:

1,000 Lawson, 2,000 Patten, 2,000 Queen, 500 Craig, 1,000 Fair Maid, 1,000 Prosperity.

NOVELTIES FOR 1908

HARVARD. Glowing crimson (the real Harvard color). This variety will take the place of all other crimsons as it is very free and the blooms are of the finest as to size and quality. It is a very rapid grower and the habit is ideal. Rooted Cuttings, \$12.00 per 100, \$100.00 per 1000. January Delivery.

FAUST. A brilliant scarlet. This variety will replace all of the commercial varieties of this color owing to its extreme productiveness, many plants last December having 20 buds and blooms to the plant. A fine one for the Xmas trade. Rooted Cuttings, \$6.00 per 100, \$50.00 per 1000. January Delivery.

REMEMBER WE GUARANTEE SATISFACTION.

REVIEW OF THE MARKET

NEW YORK.—With the exception of Tuesday, on which day the rain poured heavily during the forenoon, the cut flower business has been quite good in most lines. Roses of all kinds available have cleared out fairly well, and at prices that may be said to be satisfactory, considering that we are in the month of October. Special American Beauty brought 25c. and 30c., and the same grade of Bride and Bridesmaid, 6c.; Number two grades, also, are bringing a little better prices than they were.

Chrysanthemums are becoming much more plentiful, and as is to be expected when this condition arrives, the values go down accordingly. There are few for which \$3 per dozen can be obtained now; \$1 and \$2 per dozen seems to be about the standard for good blooms, with short-stemmed flowers selling at from 50c. to 75c. per dozen. Carnations are not very plentiful as yet, and no change in prices is noted. Lilies got quite scarce on Saturday last and prices jumped materially; supplies became heavier, however, on Monday, and values fell again to where they were last week. Lily of the valley is not moving very well. The supply of cattleyas is well up to the demand. There are still plenty of dahlias coming in, but the supply of gladioli is diminishing. Asters are about over for this year and it is safe to say that there has not been a year for some time past when the aster crop in general has been so poor in quality as it has been this year. There is a fairly good demand for asparagus and smilax with plenty coming in regularly.

CHICAGO.—The Fall business here shows a healthy condition, and though there are off days the market generally for the past two or three weeks has been good. The local trade has been satisfactory throughout September and the first week in October, and the outside business, which has opened up favorably, is so general throughout the shipping district that confidence is expressed that it will continue.

The rose and carnation conditions have not changed perceptibly since our last report.

A number of houses have been added to the list who are cutting chrysanthemums and the quality is generally good. The flowers appear to be, in many cases, several days, perhaps a week, earlier than usual.

The aster season has practically closed; there are some coming in every day, but they are in the sere and yellow leaf and sell, if at all, generally for about what the buyer may offer.

The green goods business holds very good and box green is now offered by several dealers. W. K. W.

PHILADELPHIA.—On Monday there was much activity in the cut flower market, but on Tuesday business had dropped off considerably. There is lots of stock of all kinds now coming in. Early chrysanthemums are becoming very numerous and already no reasonable offer is refused as the supply is in excess of the demand. We have pink and white Glory of the Pacific, selling at \$1.50 and \$2 per dozen; Monrovia at \$2 to \$3 per dozen and going slow at those prices.

The best American Beauty bring \$3 to \$4 per dozen. Tea roses, first class stock, are scarce. There have been a few sales at \$10 per 100, but most of the stock goes at from \$5 to \$8.

Carnations are getting better in quality and selling at from \$1 to \$3 per 100. Liliun longiflorum blooms bring \$2 per dozen. As regards dahlias, while there are still a good many sales, the present season has not been so good as former ones—too much stock on the market. Three years ago only two growers shipped here; now there are six large shippers and there has been an excess in supply right along.

Double violets realize 75c. per 100; large singles, 25c. to 50c. per 100. Lily of the valley is not over plentiful at \$3 to \$5 per 100. It is difficult to obtain gardenias at \$5 per dozen.

Asparagus plumosus is moving well at 50c. per bunch; smilax at 15c. and 20c. per string.

DAVID RUST.

BOSTON.—Business with the approach of cooler weather is steadily improving. The quality of flowers is also getting better. Roses have greatly improved, Bride and Bridesmaid now having good rigid stems. Richmond and Killarney are both of fine quality. American Beauty are good and sell well. A better grade of carnations has caused prices of the poorer grades to drop, but good blooms still maintain the values of a week ago. Chrysanthemums have begun to appear in larger numbers, but yet sell well at \$1.50 to \$3 per dozen. Lily of the valley brings from \$2 to \$4. Lilies are scarce at \$10 and \$12. Gladioli are still plentiful but do not bring big prices. Violets are getting more abundant but all are from outdoors, and do not sell well yet. Sweet peas are still good grown out-of-doors. Smilax and asparagus remain at the same prices. Hardy cut ferns have advanced to \$1.25 per 1000. J. W. D.

CINCINNATI.—Business is fine. Chrysanthemums are now coming in and selling at \$12.50, \$15 and \$25 per 100. Monrovia, Estelle and Willowbrook are the finest in the market. American Beauty is in limited supply and sells well. Bride and Bridesmaid roses are selling out clean every day. Carnations are very scarce. Dahlias are cutting quite a figure now, and will for a week or so until frost nips them. E. G. G.

ST. LOUIS.—The retailers throughout the city report a good business the past week in decorations, weddings, receptions, dinners and a good lot of funeral work, so we can safely say that carnival week proved a good one for the local trade. The downtown florists had a little the better of it, as the great crowd of visitors swarmed the downtown district where much transient business was done. The wholesale market, too, had a busy week and sold out of good stock pretty well almost every day.

Roses have been very plentiful all week and stock in all grades very good with prices running from \$2 to \$5 per 100. The smaller roses in American Beauty went well at from \$1 to \$4 per dozen. Chrysanthemums are now coming in, and these will put a temporary stop to the rose sales. Extra fancy Monrovia, yellow, bring \$3 to \$4 per dozen, and white Willowbrook and smaller sorts, \$4 to \$6 per 100. Carnations sold well all the past week; in fact, clean sales were reported by all the wholesalers. Prices ran from \$2 to \$3 per 100 for the best; better values could be had if the stems were longer. Extra fine Lily of the valley brings \$3 to \$4 per 100 and there is plenty of it in the market. Cosmos is now in plenty, and extra good, at 50c. and 75c. per 100.

Outdoor stock is becoming scarce, tuberose and dahlias constituting about all coming in, and of these good sales were reported. Wild smilax has a good call for decorations. With all other greens the market is well supplied, and the usual prices prevail. ST. PATRICK.

INDIANAPOLIS.—Considerable improvement was noticed in all sections of the trade and expectations for a resumption of heavy Fall business are rife. All kinds of decorating has begun in earnest. Weddings particularly are to claim the attention of the retailers this month. Department stores continue to be an outlet for numerous decorative plants.

At this season serious difficulty is experienced in supplying the expectant shopper with a variety of select flowers. Dahlias, still beautiful, have almost worn themselves threadbare, but there is little else besides the staple articles to advance. Chrysanthemums are available in increasing numbers each day, but there is not a great amount of profit realized on them after paying the growers \$4 per dozen.

Cosmos has eventually made its appearance in quantity; if heavy frosts are delayed an immense crop will result.

Carnations do not tarry long with the wholesaler at \$1.50 per hundred nor with the retailers at 60c. per dozen. Several of the growers are having trouble with diseased plants and are replacing many; this will in all probability affect the supply for months.

Many cattleyas are offered, but the patronage is disappointing, at this time \$35 per hundred is the wholesale price. Harrisii, also a few callas, are seen at \$15 per hundred.

American Beauty sales take the lead in the rose line. The quality is fine and more satisfaction is derived from them as they are clean and profitable; \$35 per hundred is quoted for 36 to 42-inch stem stock. Killarney always sells well at \$1.50 to \$2 per dozen retail. Bridesmaid and Bride are readily disposed of at \$5 to \$6 per hundred.

A visit to the chrysanthemum growers discloses an exceptional array of plants, but it will be at least a month before any of the craft will be ready for the market with a heavy cut. I. B.

FIRMS WHO ARE BUILDING.

WHITMAN, MASS.—A. A. Reed is making improvements to his greenhouses on West street.

MINNEAPOLIS, MINN.—The Lakewood Cemetery has been granted a permit to erect a greenhouse at a cost of \$2,500.

TACOMA, WASH.—Frank Spaulding will erect a large greenhouse, and Mrs. E. A. McLaughlin has secured a permit to build one, 20x65 feet.

CHANGES IN BUSINESS.

LE MARS, IA.—John Atwood has opened a cut flower store here.

SAN BENITO, TEX.—The San Benito Nursery Company has been incorporated with a capital of \$5,000.

HUDSON, MICH.—The Hudson greenhouse plant (Mrs. Alwood, proprietor) has been sold to Mr. Peterson, of Lansing, who will continue to operate it.

CANEY, KAN.—N. O. Vincent is building a greenhouse in the Keystone addition, and will embark in the florist business, in which he has had considerable experience.

CAMDEN, N. J.—The Eagle Nurseries Company has been incorporated to do a general nursery business, etc.; capital, \$100,000. Incorporators: Louis M. Stiles, Philadelphia; Robert Peacock, and Charles Bridge.

PORTLAND, ORE.—The name of the Montavilla Floral Company, Montavilla, P. O. station, has been changed to that of the Mountain View Floral Company. The firm operates a nursery at Mount Tabor, and also makes a specialty of landscape gardening.

WESTERLY, R. I.—The business of S. J. Reuter was changed on the first of this month into a corporation. The concern will hereafter be known under the title of S. J. Reuter & Son, Inc. The capital stock is \$150,000. The officers are as follows: S. J. Reuter, president; L. J. Reuter, vice-president and manager; C. H. Nichols, secretary and treasurer.

AMHERST, MASS.—A four days' celebration of the fortieth anniversary of the opening of the Massachusetts Agricultural College, was begun on October 2, with the first sessions of a conference on rural progress. This, the anniversary day, was one of the most important of the four, as besides the delivery of numerous addresses of much interest to those in attendance, the dedication of a new botanical building was arranged for.

Marquis F. Dickinson of Boston reviewed the history of the college. In speaking on "The Beginnings of College History," Mr. Dickinson told of the incorporation of the Massachusetts Society for Promoting Agriculture in 1792. It is still in existence, he said, fulfilling its great mission after 117 years of fruitful service. It was the great pioneer of agricultural societies in New England. It began to agitate the subject of agricultural education very early and has been a staunch supporter of the Massachusetts Agricultural College.

Reference was made to efforts from time to time to introduce agricultural departments at Dunmer Academy, Byfield, in 1824, Phillips Academy about 1840, Westfield Academy about 1856, and Bussey Institute at Jamaica Plain, established under the will of Benjamin Bussey, who died in 1842, which has grown into a department of Harvard College.

Mr. Dickinson gave an account of Oliver Smith's will and of its provision for Smith's Agricultural school, just established at Northampton, 60 years after the testator's death. The interest taken by Marshall P. Wilder, the great horticulturist, president of the first board of trustees of the colleges, was spoken of.

Clark Hall, the dedication of which was one of the features of the day's program, was named after William S. Clark, the third president of the college. The new building fills a want long felt by those connected with the college and will prove of much assistance in the operations of the experiment station.

Newport, R. I.

News and Trade Notes.

Several if not all the florists on Bellevue avenue, are congratulating themselves that they had not closed their stores there for the season, when the unexpected announcement of the engagement of Miss Gladys Vanderbilt to the Hungarian count was made last week. The announcement referred to acted like magic on the flower market; it seemed that not only were flowers for delivery at the "Breakers" ordered by all the remaining members of the cottage colony, but also that numerous orders were received from New York and other cities by Newport florists. The wedding will take place, it is said, on November 4. It is persistently rumored that Messrs. Wadley & Smythe have already received orders for the floral decorations which are expected to be on a scale of unusual magnificence.

Visitors here last week included George H. Struck, representing Messrs. Lager & Hurrell and the F. R. Piereson Company of Tarrytown. Mr. Struck is meeting with encouraging success in the matter of pushing the latest Tarrytown fern, *Nephrolepis superbissima*. Since the recent exhibition when two firms exhibited plants of *N. todeoides* and *N. Amerpohli* here, numerous shipments of both these beautiful ferns have arrived from the establishments of the firms making the exhibits at the show.

Although it was well known to almost everybody connected with horticultural pursuits for some time that the condition of the J. M. Hodgson Company was anything but satisfactory, the announcement of the firm's bankruptcy came in the nature of a surprise. Much sympathy is expressed for Mr. Spaulding because of the position he is now placed in. For many years during the life time of the late J. M. Hodgson, the largest and best business in Newport in the retail florist line was done from the well known store and greenhouses on Bellevue avenue, and not only there, but also in New York, about twenty years ago. Hodgson was a prominent name in florists' circles.

All of the old greenhouses of the "By the Sea" greenhouses owned by Perry Belmont and managed by John Marshall will hereafter be closed, and ultimately torn down; in the future only those known as constituting the rose house range will be run, but these will be operated on commercial lines as formerly.

The old greenhouse on the estate of Henry Clews is to be torn down and it is understood will be replaced some time soon by one of modern construction.

David Smith, of the well known firm of Scotch rose growers of that name, visited Newport last week on his annual American business tour. Mr. Smith remarked while here that the demand for hybrid tea roses for outdoor planting is greatly on the increase all over the country.

Last year F. L. Zeigler, in his store on Broadway, advertised dahlias by the display of blooms, each variety labeled, in the window; this year Geo. A. Weaver and Wm. B. Scott & Company have adopted the same plan. The orders are taken for Spring delivery.

In consequence of the heavy drain on the local supply of ferns all through this past Summer, there is now a scarcity of these here, which will result in the local florists being, later on, heavier purchasers of that line than usual. D. M.

The book of WATER GARDENING
By Peter Blisset. Price, postpaid, \$2.50
A. T. DELAMARE PTG. & PUB. CO., LTD.
2 to 8 Duane Street, New York.

LOS ANGELES, CAL.—Merchant florists of the city have opened fire on the vendors who sell flowers on the street, who have been making deep inroads into the revenue to which the regular stores have been accustomed. A delegation of ten florists, headed by F. J. Zeehandelaar, secretary of the Merchants and Manufacturers' Association cornered the Mayor in his office recently and asked that action be taken to restrict the vendors to a limited area, such as Central Park, and that no permits be issued to vendors to sell flowers in the business zone. The florists urged that the miscellaneous vendors, who pay a license of only \$5 a month, should not be allowed to cut into the trade of the florists who pay taxes on their stores and who also afford employment to a considerable number of people.
Many of the vendors are Italians, and it is said that they buy their flowers from the Japanese who raise the floral products on cheap-rented land.
Some action will probably be taken in favor of the merchant florists as a result of the conference with the Mayor.

BRIDGEPORT, CONN.—Stephen T. Banks, florist, has accepted the presidency of the Fairfield Aluminum Foundry corporation.

WHOLESALE AND RETAIL FLORIST

ROSE and CARNATION blooms our specialty. 100,000 plants to cut from. Also rooted cuttings of carnations. All latest varieties. Orders promptly attended to.
THE WORCESTER CONSERVATORIES
 WORCESTER, MASS.

through. At the tables, 28 in number, small baskets of bouvardia and lily of the valley were used; and at the bridal table white roses and lily of the valley. The musicians were hidden by large baskets of American Beauty roses, and the fountains were filled with water lilies. Palmer had the decoration.

Business is picking up in all directions. The month of September has been unusually good for wedding and store decorations, also funeral orders. Good flowers of all kinds are scarce with the exception of American Beauty, which are in sufficient numbers to supply the demand. Carnations are scarce and short stemmed.

S. A. Anderson is building an addition to his Elmwood avenue greenhouses. These houses are devoted to the growing of plants and flowers for his retail trade.

W. J. Palmer is cutting a good quantity of fine Bon Silene roses at present. Chrysanthemums are coming into the market slowly so far; prices of these have been so exorbitant that the local florists have not been able to sell very many.

Al. Reichert has opened a store at the corner of Genesee and Jefferson streets; this ought to make a good stand.

Several of our local florists have the political bee in their bonnets again. Wm. F. Kasting was nominated on the Democratic ticket for city treasurer. He is very popular among the florists here, and they will do all in their power to elect him. He also has a large following among the different societies of which he is a member, he holding office in several lodges at present. His many friends are confident that if elected he will make a very good, honest and sincere administrator.

W. A. Adams, known among the trade as the man who can talk all day without repeating anything he has said, has received the nomination for supervisor in his ward. He is very popular among the residents of his ward, it being Republican; he will no doubt be elected with a handsome majority.
 Charles Reichert has been elected general committeeman in his ward.
 W. H. G.

Indianapolis.

Current Topics.

Martin Braendlein and A. Pahud are replanting a portion of their carnation houses.

Visitors attending the Marshall Field opening in Chicago comment freely upon the wonderful floral effects. Several of the largest stores sent representatives for the sole purpose of gaining ideas from the most elaborate store decoration the world has ever offered.

The Indiana State Florists' Association at its monthly meeting October 8 will perfect its plan for the customary Autumn exhibition of flowers. A. Wiegand & Sons have tendered their conservatory for two days, November 13 and 14. Herman Junge and A. Baur have the preparations in charge.

Buffalo, N. Y.

A Notable Wedding Decoration.

The Schoelkopf-VomBerge wedding was one of the largest for decorations we have ever had in Buffalo. The church was decorated with torches lining the center aisle, about 100 hydrangeas being used in same. There were sixteen torches in this aisle, with bunches of Harrisii lilies on every other pew tied with good big bows of satin ribbon. The pulpit was banked with palms, three torches being used here with bunches of 150 Harrisii lilies in each. The side aisles were decorated with light colored gladiolus; this attracted the attention of many floral experts. In the house decorations the scheme of using a different color in every room was carried out with good effect. A large vase of American Beauty was placed in the hall. In the receiving room 1,000 anemoidium sprays were employed; these were placed on a large mirror, and made a very artistic piece of work. In the marquee, which was artistically decorated with plaster pillars, electric lights and fountains were placed at each end, also bay trees and palm gardens with laurel hanging all

J. B. Deamud has returned from a trip through the Michigan fern district where Lacy Young, representing the Deamud and Young Fern Company, is laying in their stock for the coming Winter. He reports the prospect as excellent for the season's supply.

C. W. McKellar is showing some handsome specimens of *Cattleya labiata* and *Dendrobium formosum* for the opening of the orchid season.

Out at Morton Grove Poehlmann Brothers Company have their stock in a most promising condition; in fact, it is doubtful if, taken throughout, it ever looked better if as well. They are installing, at an expense of \$10,000, a new cold storage plant, the machinery in connection with which is to be operated by electricity. The best of everything to perfect and facilitate business is a well executed rule at the Poehlmann Brothers' establishment.

George R. Scott of the E. F. Winter-son Company staff, accompanied by Mrs. Scott, is visiting his old friends and haunts in Indiana.

John Zech, whom we reported last week as quite ill, is constantly, though we regret to say, rather slowly improving.

H. R. Hughes has commenced the enlargement of his store which when completed promises to be unique and beautiful in the form of a garden, the architecture in a general way following the colonial style. With ninety feet of frontage on Van Buren street, the effect will be very imposing. A force of ten men has been at work to hasten the completion of the improvements that Mr. Hughes may be prepared to give the large chrysanthemum show which he has planned at an early date.

Wietor Brothers commenced cutting Lady Harriet chrysanthemums on October 5, which N. J. Wietor says he believes to be the early record for high grade pink chrysanthemums.

H. C. Blewitt of Des Moines started last Saturday the erection of a one hundred foot lean-to violet house which will be devoted to the California variety.

Vaughan & Sperry report violets from New York State as coming in very good shape from growers who have kept the flowers picked, while those from growers who are just commencing to pick are not as good. The publicity given to Mr. Vaughan's recent visit to the violet section has given him the standing of an authority on the violet subject and he is receiving letters from Western correspondents relative thereto.

W. W. Randall, who prefers the delightful weather of October for his vacation, is now enjoying himself among old friends in Erie County, Pa.

Mrs. John Schmidt, formerly well known in the flower market as Mrs. Will Tessler, opened a flower store the first of the week at Thirty-first street and Indiana avenues.

Scheiden & Schoos are in the market with a fine stock of about 30,000 field grown carnation plants of several popular varieties.

John Risch says that Weiland & Risch will make a leader of Rhinebeck violets this season; in fact, that for two or three years past they have been strengthening themselves on this point. Their old stronghold, Killarney rose, is as good or a little better than last year at this time and their crops are all in promising condition. They commenced cutting chrysanthemums last week.

The retailers generally seem happy over the results of business during September and the early part of October. Doubtless the several national societies, mercantile, fraternal, and social, which have held their annual meetings here, have all contributed their quota to this pleasant condition of affairs.

P. J. Foley says that the Foley Manufacturing Company in their new quarters are rushed now to their full capacity, yet always have time to receive visiting florists who wish to inspect their factory.

Marion B. Steczynski, florist, was recently chosen president of the Polish National Alliance at the biennial convention held at Baltimore, Md.

To more satisfactorily fulfill the requirements of his store trade, Anton Then has made a change in his growing plan this year by discarding enough carnations to make room for 9,200 roses embracing American Beauty, Bride, Bridesmaid, and Richmond. He still retains six houses of carnations, from

Chicago.

The Week's News.

Richard F. Gloede of Evanston secured a settlement with the Drainage Canal Commission last week by which they take his entire property at a price satisfactory to him, granting him a lease of the same until August 1 next. It is Mr. Gloede's intention to commence immediately the erection of a dwelling on a piece of land in the same neighborhood on which he has held an option and which he will now purchase, and next Spring will erect a thoroughly up-to-date range of glass consisting of three large houses. It is his intention to devote himself exclusively to his landscape business which has already reached important dimensions and to the wholesale rooted cutting trade, with geraniums and other bedding stock as specialties, practically giving up the cut flower branch of the business.

F. W. Timme, with his wife and daughter, returned last week from a delightful ten weeks' trip abroad. Sailing from New York they landed in Scotland and most of the time was spent in Great Britain, though a short trip across the Continent completed their foreign experiences, the return being made via Baltimore to Chicago. "The best place of all," as Mr. Timme puts it, "Pleasure and perfect health were their constant companions; not a meal was missed by any of the party and Mr. Timme states that except when eating or sleeping his pipe was not out during the trip. Already he is anticipating his European tour for next season he having contracted the "Summer abroad" habit.

During the terrific thunderstorm which visited this section early Thursday morning of last week, the greenhouse of Carl Thill at 4569 Pingree avenue was struck by lightning, a chimney torn away and some glass broken.

THE BEST WAY

to collect an account is to place it with the

National Florists' Board of Trade

56 Pine St., New York

WHY? Because many debtors will pay the
Board fearing otherwise a bad rating in
our Credit List. Full information as to
methods and rates given on application.

which he expects to supply his store
needs. He has two houses in chrysau-
themums and a house of cyclamen. One
house of poinsettias gives bright Christ-
mas promise. The usual number of
lilies and other bulbous stock will be
planted. A commodious ice box is be-
ing installed at the greenhouses.

It is generally considered that the
fact that the supply business is unusu-
ally brisk this Fall surely presages an
active flower trade as soon as the sea-
son is fairly open.

Vaughan's Seed Store received the
first of the week their first carload of
azaleas and they have also commenced
receiving regular shipments of boxwood,
which is coming in fine condition.

At the Auditorium Tuesday evening
the executive committee of the Horti-
cultural Society, with such interested
parties as were unable to attend the din-
ner given at the Union Restaurant on
the 16th ult., met and further discus-
sed ways, means and plans in connec-
tion with the coming flower show. The
final details of the premium list were
also perfected.

C. L. Washburn of Bassett & Wash-
burn reports that most varieties of
chrysanthemums are fully a week if not
two weeks ahead of their usual time.
On the whole he says the chrysanthem-
ums coming into the market are an-
nually improving. The demand is for
better grades and the growers with su-
perior varieties and improved culture are
filling it satisfactorily.

Sinner Brothers have done an unusual
amount of house cleaning this Summer,
nearly all the benches having been re-
built and they start into the season with
stock in excellent shape.

A good start has been made this
Summer out at Peter Reinberg's new
range, "The Farm," about two miles
northwest of his home. Eight houses
on the Dietsch plan, each 300 feet long,
were built for a starter and are now
filled with 65,000 carnations of the
following varieties: White and Pink Law-
son, Enchantress, Boston Market, Lady
Bountiful, Cardinal and Robert Craig.
The plants though small are in excel-
lent condition and well established.
There has been some delay in setting
the boilers and completing the shed,
but in another week all should be in
readiness.

The horse show, which opened on
Tuesday at the South Shore Country
Club, tendered as usual a perceptible
help to the business of several retailers.

Dan MacRorie left Chicago eight or
ten days ago, visited St. Paul, Minne-
apolis, Omaha, and Denver, returning
here from the latter city on Monday.
He reports a good business along the
line. He left for the East the same
day.

At a meeting held last Saturday even-
ing it was decided to hold the second
annual ball by the wholesale florists
at Columbia Hall, 638 North Clark
street, on Wednesday evening, Oc-
tober 30. The decorations will be on a
very elaborate scale and every possible
endeavor will be exerted to make this
occasion a memorable one. The com-
mittee in charge of the affair consists
of John Enders, Charles Erne, and
H. W. Rogers.

Mrs. Graff, mother of Sam and Will
Graff, has been seriously ill with pneu-
monia, but is improving. If her con-
dition warrants it Sam will leave early
next week for Seattle, Wash., where he
intends to make his future home.

P. L. McKee of the J. C. Moninger
Company force, accompanied by Mrs.

McKee, has been enjoying his annual
vacation, going as far East as New
York and as far South as Kentucky.

F. Lautenschlager, representing the
Kroeschell Brothers Company, is taking
a trip through the East.

The Winterson Seed Company is hand-
ling a fine lot of Festiva maxima peony
roots.

The J. C. Moninger Company fail to
perceive the usual October lull in their
business and they are pushed to their
utmost to keep up with their orders.
Mr. Rupp says by another year he ex-
pects to have matters in such shape that
they will never be pushed. There is
no more available land where they are
located, but the concern's half century
anniversary will be celebrated by adding
some stories to their present buildings.

A. L. Randall and family returned
the first of the week from his fruit
farm at Benton Harbor, Mich., where
he has been since July 1. The cold
weather last Spring ruined nearly all
the fruit in that section, but while many
of his neighbors had absolutely none Mr.
Randall was fortunate enough to ship
fruit, the returns for which ran well
into four figures.

October weddings are now on and A.
Lange, who generally comes in for a
goodly share of this work, reports the
usual amount in sight for the rest of
the month.

H. A. Fisher of Kalamazoo, Mich.,
who is known to be considerable of a
baseball enthusiast, was in the city
this week to witness the world's cham-
pionship series.

Recent visitors included W. T. Hemp-
stead, Bloomington, Ill.; Mr. Klopfer
of Klopfer & Nelson, Peoria, Ill.; Wil-
liam Bunde, St. Paul, Minn.; Mr. Wie-
gand, Indianapolis, Ind.

WILLIAM K. WOOD.

Detroit.

Trade Notes.

Trade is improving nicely and all
wish that stock would do the same,
notably in quantity. The Michigan Cut
Flower Exchange is receiving large
quantities of gladioli from E. E. Stew-
art of River Junction, Mich. A wel-
come article in these days of scarcity.

Robert Klagge of Mt. Clemens and
John Breitmeyer's Sons were the first
to cut chrysanthemums this season in
this locality beginning October 5.

Thomas Brown has planted 10,000 of
his White Enchantress which was the
best white carnation in the local mar-
ket last year.

Mr. Krauss, who bought George
Leadley's flower store last Spring, is
now wrestling in the local courts to
protect himself, because Mr. Leadley,
who sold out on account of poor
health, started a store right off Wood-
ward avenue, but two blocks away from
the old location, only a few weeks af-
ter he sold out.

The local park commissioner is the
recipient of a large collection of choice
plants from the late Oren Scotter es-
tate. This collection embraces about
2000 orchids, mostly cattleyas, oncid-
iums, dendrobiums, and cypripediums.
Also very large palms such as seafor-
thia, latania, chamærops and many
large agaves; \$1500 is now being spent
to provide a shelter for these plants.

F. D.

DAYTON, O.—A handsome specimen
of the hand carving done in Switzerland
is the bench or settee in the store of J. B.
Heiss, florist, at 112 South Main street,
and the attention of every person who en-
ters the store is irresistibly attracted to
it. Three brown bears with their paws
hold in place the seat, the back being
formed by the bears with their limbs
outstretched. The carving is exquisite
and the longer one looks the more he
admires. The bears have their mouths
open and their countenances wear a
happy contented expression. A number
of friends have urged Mr. Heiss to place
the seat in his window so that the public
may have the benefit of its beauty, but
as it is large and heavy this would hard-
ly be practicable.

Mr. and Mrs. Heiss found the bench
in a store in Switzerland and were so
struck with its artistic value that they
purchased it on the spot and brought it
back to America with them, and they are
very proud of their find.

The Florists' Club met on Monday
night at the establishment of J. F.
Young, East Fifth street; a number of
important trade matters were discussed.

SOUTHERN WILD SMILAX BEAVEN'S FADELESS MOSS NATURAL SHEET MOSS E. A. BEAVEN, Evergreen, Ala.

Washington, D. C.

Trade Notes.

Ideal weather has prevailed during the past week for all crops both indoors and outside. Business has commenced to improve, and each day the society folk are returning to their Washington homes. During the week cosmos appeared in limited quantity. Mr. Shellhorn brought in the first of his Willowbrook chrysanthemums. Wagon loads of dahlias continue to pour in daily; most of those grown by the trade are of exceptionally good quality this season, but the demand is poor. Carnations are very good.

Much of the corn about the District of Columbia and adjoining counties in Maryland and Virginia has not matured sufficiently to cut, and frost is looked for any night. About a week more of warm weather would avert considerable loss to the farmers.

Bowling Club Notes.

At a recent meeting of the Washington Florists' bowling team the club was reorganized as follows: Chas. McCauley, secretary and treasurer; Geo. H. Cooke, captain; W. H. Ernest, resigned. Everything is in good working order and a lively interest is being taken. Eleven members were out on Wednesday night and made the following scores: George H. Cooke, 220, 189, 158; Geo. C. Schaffer, 171, 187, 195; Robert McLennan, 130, 152, 182; D. Simunds, 140, 179, 172; Edw. Freeman, 165, 116, 141; Wm. H. Ernest, 125, 151, 196; H. Lewis, 160, 165, 130; Wm. Clarke, 158, 156, 126; Chas. McCauley, 97, 152.

Secretary McCauley, with his usual foresight for the welfare of the club, has devised a plan by which to defray the expenses of the bowling team to Niagara Falls next year when the S. A. F. Convention meets. His plan is to have tickets valued at from one cent to one dollar, placed in some receptacle from which the purchaser draws one and pays a cash equivalent. After all tickets are sold, a number will be drawn in like manner and whoever has the corresponding number wins a prize consisting of a bowling ball valued at \$15 or that amount in cash. Mr. McCauley reports tickets selling rapidly and says "drawing the lucky number" will constitute one of the interesting features of the next club meeting, which will take place on the evening of November 5 at Gude's hall.

JAS. L. CARBERY.

Providence, R. I.

Trade Notes.

Mathew Macnair & Sons have the finest looking delivery wagon in this city; it is very stylish and nicely decorated and is suitable for a single or double team.

John A. Macrae's stock of carnations, chrysanthemums and violets never looked better; he also has a very fine line of azaleas, cyclamens, primulas, ferns and hothouse stock coming along for the holidays. He had a representative of a large Boston concern here the past week trying to contract for all he grows for the coming season.

The J. A. Budlong & Sons Company of Auburn, R. I., have Robert Dunn, formerly of the Waban Rose Conservatories, in charge of one section of their houses.

William Tarbox, the "dahlia king," entertained the Providence Motorcycle Club at his place in East Greenwich on Sunday last.

Nathan D. Pierce of the Home Nurseries and Norwood Floral Company, has just completed a cold storage house; it is very conveniently connected with the greenhouses. The new house is principally for the storage of shrubs, trees, etc., for Spring forcing. Mr. Pierce reports the nursery business booming.

Eddie Murray, the popular salesman with Johnston for the past ten years, has joined the Waterbury (Conn.) polo team.

DEATH OF A DAHLIA SPECIALIST.—E. A. Turner, New Bedford, Mass., an enthusiastic dahlia grower, and one of the first members of the New England Dahlia Society, died recently. He had been actively engaged in commercial dahlia culture for the past six years, in partnership with his son, Wm. F. Turner, who will continue the business under the name of William F. Turner & Company, William Keith of New Bedford, Mass., being associated with him in the enterprise.

Then it will be up to you to choose. If you don't want to wait until then, write us now.

HITCHINGS & COMPANY

GREENHOUSE DESIGNERS AND BUILDERS

Manufacturers of Heating and Ventilating Apparatus

1170 Broadway, New York

Boston.

The Week's News.

At the meeting of the Gardeners and Florists' Club on the 15th inst., the speaker of the evening will be Wilfred Wheeler of Concord, his subject being "Fruit Growing." W. W. Castle can not be present on that evening as announced last week, hence the change. Mr. Wheeler is an up-to-date fruit grower, being chairman of the fruit committee of the Massachusetts Horticultural Society, and as everyone is interested more or less in this subject a large attendance is warranted.

John Mackenzie is building a new house, 200x40 feet, installing two 40 h. p. boilers and adding an office building, 20x25 feet, to his place at North Cambridge. He has two houses of Boston ferns in fine shape at the present time.

George Cartwright has gone to Philadelphia for a few days visiting his daughter who resides there.

Some of the finest chrysanthemums coming into this city at present are from the greenhouses of Thomas Roland, Nahant; the varieties are Polly Rose, Glory of the Pacific and Monrovia.

R. L. Alley, long known in the business in Danvers, died at his home on Monday after an illness of three weeks.

H. M. Robinson & Company will have a reunion of their customers and friends on the 29th inst., to celebrate their first year in the wholesale cut flower business.

E. Holmes of the Montrose Greenhouse is shipping some extra fine Killarney, Bride and Bridesmaid to the Park street market, where his goods are handled by E. A. Stickels.

H. L. Belcher, of Winthrop, has secured a stall in the Park street market for the sale of his products.

At the meeting of the board of trustees of the Massachusetts Horticultural Society on Saturday it was decided to keep the library open for the use of readers on Sunday afternoons, as has been tried during the past few months. This is a splendid opportunity for those who cannot get to the library on week days, and young gardeners especially should take advantage of it.

W. W. Rawson & Company offer a special prize of a silver cup valued at \$25 for the best collection of narcissi and daffodils in eight-inch pans, for private gardeners only, at the Spring show of the Massachusetts Horticultural Society.

Thos. F. Galvin is taking a few weeks' vacation in Europe.

Visitors this week included Mr. Wilson, of Summit, N. J., also Harry O. May and wife on their way home from their honeymoon spent in the Rangeley Lake district.

Thos. F. Galvin, Inc., are very busy with wedding decorations these days. This week they have the Wolcott-Richardson and also the Lovering-Bacon wedding; at the latter the decorations are quite elaborate. Chrysanthemums predominate in the church, while the home decorations are largely of Rich-

mond and American Beauty roses. This firm also had some choice funeral work this week at the funeral of C. N. Coffin, where an extensive lot of orchids was used and some difficulty had in procuring them. J. W. DUNCAN.

Rochester, N. Y.

Business Bits.

Now that October has arrived, bringing with it frost-laden air, business has taken on a different aspect. With the return too of tourists and others a demand is apparent for house plants of every description.

Up to present writing no killing frosts have appeared, consequently asters, dahlias, gladiolus, and anemones are still to be had in abundance, and are useful at this time, as but little greenhouse material is available. Next week the first cut of chrysanthemums will be on sale; varieties Florence Teall, and Glory of the Pacific. Carrie, a very early dwarf yellow, useful as a pot plant only, has been on the market the last month, but is not a good seller, the color perhaps being a little off at this season. The average growth of bunched chrysanthemums this year will give us shorter and harder stems, due no doubt, to the hot, dry summer. This is perhaps a desirable feature, as it will help in the packing and shipping of the longer stemmed varieties.

Carnations and roses are arriving and show the benefit of early bunching of the former in longer stems and even color. Prices are \$1 to \$2.50 per 100. Roses sell at \$3 to \$6; American Beauty, \$10 to \$25 per 100.

Well grown pots of Primula obconica and other flowering plants are easily disposed of as also palms, Boston ferns and other house plants, at prices which are governed by quality of stock.

Considering the larger importation of Holland bulbs by the different firms here, a good season is looked for, not so much for forcing purposes, as for outdoor planting, numerous orders having been placed by the factories and shops having available land for such purposes, a friendly rivalry existing as to which can have the showiest place.

Stephen Green was here this week, looking after the interests of H. Bayersdorfer & Company and reports business exceedingly brisk.

COCKNEY.

SAN DIEGO, CAL.—The San Diego Floral Association will hold an exhibition in Germania Hall, October 25-27 inclusive. The association was organized last March, and is now 200 strong. The officers are: President, Alfred D. Robinson; vice-presidents, Dr. W. F. Gearheart and G. Hitchcock; treasurer, L. A. Blockman; secretary, Rodney Stokes.

MURON, S. D.—Fred. G. Hutchins, proprietor of the Muron nurseries, was stricken with paralysis recently. For a time he was in a critical condition, but is gradually regaining strength and physicians think he will recover. Mr. Hutchins is one of the best known nurserymen and horticulturists in this section of the country.

JUST OFF THE PRESS

THE BOOK OF Water Gardening

This book supersedes all other books that have previously been written on the subject of aquatics and their surroundings, and gives in full detail all the practical information necessary to the selection, grouping and successful cultivation of aquatic and other plants required in the making of a Water Garden and its environments, and covering all conditions from that of the Amateur with a few plants in tubs to the large estate or park

Heating.

Growers' Problems Solved by U. G. Scollay.

How many runs of two-inch pipe will be required to heat a graperly to 60 degrees after the first of March in the vicinity of Boston. House, 33 feet long, 20 feet wide, and 10 feet at the ridge. W. W.

—I repeat your dimensions to avoid error, for I presume that your house is 20 feet wide, but it looks like 30 in your letter, therefore, to heat a graperly 33x20x10 feet to ridge to 60 degrees, I would advise twelve lines of 2-inch pipe. This may seem a large amount of surface for you, but during the month of March your climate sometimes suffers worse than in January. I, therefore, take precautions and give you ample surface.

U. G. SCOLLAY.

MONROE, MICH.—The completion by Charles Ilgenfritz of an immense concrete storage cellar, just south of the city, opens up another new nursery enterprise.

Cultural Directions

Are leaflets written by practical men especially for the use of amateur customers. If you have a counter trade, either in plants, seeds, flowers or bulbs, you should have a supply of these leaflets on hand to present to your customers when they seek cultural information about their purchases. (The leaflets embrace over forty subjects.) We can supply them at \$2.50 per 1000, or 500 for \$1.50, and can make a reduction of those prices on large quantities. At a small extra cost we can put your imprint on each leaflet. Try a thousand and see what a help they are in selling goods. The following "Culturals" are particularly seasonable for your customers at the present time: Chrysanthemums, Dahlias, Hyacinths, Lawns, Lily Culture, Tulips, Freesia, Vegetables.

JOHN LEWIS CHILDS - Floral Park, N. Y.

Seed Trade Report

AMERICAN SEED TRADE ASSOCIATION

George S. Green, Chicago, Ill., president; M. H. Duryea, New York, first vice-president; F. W. Bolgiano, Washington, D. C., second vice-president; C. E. Kendel, Cleveland, O., secretary and treasurer; Leonard H. Vaughau, Chicago, assistant secretary.

The crop report of the Bureau of Statistics of the United States Department of Agriculture, for October 1, 1907, estimates the yield of clover seed at 65 per cent.; millet seed, 82 per cent.; onions at 87 per cent., and tomatoes 86 per cent.

THE CALIFORNIA LIMA BEAN CROP is being gobbled up by dealers just as fast as possible, says the Market Growers' Journal. The normal price ranges from \$2.50 to \$3 per 100 pounds f. o. b. California points. This year buyers are so eager and are bidding against each other so rapidly that they can hardly wait till the beans are out of the thrasher. Already \$5 has been paid in Ventura County and six cents at the thrasher is fully expected.

Celeriac or Turnip-Rooted Celery.

The publishers of The Florists' Exchange would be pleased to hear from growers who could supply them with five or six samples of well grown celeriac, for photographic purposes.

WHOLESALE LIST

now ready, send for it. Glad to give special prices on nursery stock in large quantities.

The Elizabeth Nursery Co.
ELIZABETH, N. J.

DES MOINES, IA.—A change has been made in the personnel of the Iowa Seed Company by the purchase of an interest of three employees of the concern which has for years been owned entirely by M. Kurtzwell and Charles N. Page. The new partners are J. N. Albright, bookkeeper and accountant; George L. Kurtzwell, seed corn expert and George C. Baker, advertising manager. These young men have been with the company for sixteen, twelve and five years respectively; they are thoroughly acquainted with the concern's affairs and all being hustlers full of enterprise, enthusiasm and energy their new relation to the company is expected to add zest to their well recognized ability as business producers. They have been elected directors of the company of which Charles N. Page continues as manager.

CHICAGO.—The National Corn Exposition, which has been attracting thousands of interested spectators daily to the Coliseum for the past two weeks, was unquestionably the most successful undertaking of its kind ever recorded. One of the most fascinating and instructive features of the exhibition was the contribution of Vaughan's Seed Store which consisted of a large wall map, embracing all of the corn-producing States, on the floor in front of which were several specimens of the product of each State, while vari-colored ribbons connected the locality on the map with the States exhibit on the floor. The map was also divided into corn belts from 75 to 100 miles in width, each marked with the average temperature during the corn growing season which would readily determine the variety of corn suitable to any given locality.

It is thought that the scarcity and high price of onion seed may have a tendency to limit or reduce the production of onion sets in this locality next year.

Mr. Corneli of the Schisler-Corneli Seed Company, St. Louis, Mo., was in the city last week.

As an illustration of the falling off of the onion set crop this year, one party who last year planted 300 pounds of seed and harvested 1,400 bushels of sets, this season planted 400 pounds of seed and gathered but 1,200 bushels of unmilld sets.

IMPORTS OF SEEDS, ETC.—October 8.—John Dunn, Jr., six cases plants, 10 tubs laurel trees; O. G. Hempstead & Son, 19 cases plants; J. W. Hampton, Jr. & Company, two cases plants; Peter Henderson & Company, 20 cases plants; Maltus & Ware, 172 cases plants, eight tubs laurel trees; McHutchison & Company, 412 tubs laurel trees, 10 cases plants; P. H. Petry & Company, 66 cases plants; A. Rölker & Sons, 24 cases plants; C. B. Richard & Company, 13 cases plants; G. W. Sheldon & Company, 23 cases plants; J. Scheepers & Company, 35 cases plants; J. Ter Kuile, 15 cases plants; F. B. Vandegrift & Company, 11 cases plants; O. G. Hempstead & Sons, three cases plants; H. Frank Darrow, 94 cases plants, 20 tubs laurel trees; W. Elliott & Sons, five cases plants; McHutchison & Company, three cases plants, five cases bulbs, 57 cases plants; Maltus & Ware, 38 cases bulbs, 337 cases plants, 68 cases trees, six tubs plants; M. D. T. Company, 75 bushels seed; H. Nungesser, 90 bags grass seed; J. P. Roosa, one bale flower seeds; C. B. Richard & Company, 13 cases plants. October 9.—Atlantic Transportation Company, 141 bags seed; R. J. Godwin's Sons, 26 bushels seed, 69 bags seed, two cases seed, seven barrels seed. October 10.—L. W. Gould & Brothers, 100 bags seed; Coakley Milling Company, 124 sacks clover seed; Seabury & Johnson, 15 bushels roots. October 11.—J. Scheepers & Company, two cases lily of the valley pips; O. G. Hempstead & Son, two cases plants; Hirsch & Smith, 10 cases live plants; Maltus & Ware, seven cases live plants, 12 hampers live plants; A. Schultheis, one case live plants.

Seed Trade Notes.

Bulbs have sold in good volume the past week, although the absence as yet of real cold weather has prevented anything like an over-the-counter rush such as we have some years when an abrupt ending of the growing season occurs. It would not be possible to imagine better weather for a great bulb season than we are this Autumn enjoying, and when the wind-up does finally come I feel that the enormous quantities disposed of will exceed even the last two great seasons. Already many standard varieties are giving out in first hands, and it will be long before the late customers will be obliged to fit their needs to the remaining unsold stocks. There is nothing like a long, steady, and even trade in any of our seasons to make satisfactory totals; a quick dash always seems to dampen the buying ardor of the customers for the rest of a season.

During the past fortnight the larger growers of peas, beans, and corn have been making what will practically be the final estimates of the delivery percentages they will be able to make their contract customers. All the crop estimates that have so far come to hand report many radical shortages in both peas and beans, but taking these reports as a whole there is one very encouraging factor that is not usually present in a year of partial crop failures like the past season. It is well worth discriminating notice that some varieties that in one section are estimated as 33-1-3 per cent. of an average crop and even less, are in another locality offered as surpluses. This applies to so many sorts that when the general evening distribution has taken place, the present outlook, I feel sure, will be very substantially improved. To illustrate clearly my meaning and give you some tangible examples: A Michigan grower tells me that he cannot deliver on his contract orders over 50 per cent. on Alaska peas, and 25 per cent. on Premium Gem peas; while as against this from Eastern growers come estimates of full deliveries and even surpluses on these same varieties. Gradus peas would seem to be half a crop or less with all the reliable large growers. Late varieties of peas have done very much better than the early sorts, from two-thirds to a full crop being reported on most of the lists. American Wonder peas seem for some unknown reason to have done well in all sections, every report so far at hand claiming a full or surplus crop. But this is not so interesting to us as it would have been ten years ago; as the demand for this fine sort has certainly flattened out the past few years. How well I remember when P. K. Bliss introduced the American Wonder pea. For years, from say its introduction to about 1895, it made as much of a furore as Burpee's Bush Lima and the various other Lima beans that need no poles, have since.

As regards the percentages of beans that will be delivered on contract orders, I will postpone a detailed report until the harvesting, cleaning and hand-picking is more nearly completed. But I will say here that, on the whole, beans will be much shorter than peas, that is, good samples, as the very wet weather during the harvesting which followed the long Summer drought has very badly spotted many varieties. The late Spring and continued dragging only in this country but in Europe, will

from now on be felt in a very annoying way as regards the late delivery of seed crops; for I believe it conservative to say, that at least all seeds will be from three to four weeks behind the average time of being delivered by the growers. Especially will this be vexatious to those seedsmen who do a large Southern trade, as even now urgent calls for seeds are daily coming from various parts of the South, notably Florida, where plantings have already commenced. Usually this very early demand can be satisfied with the new crop seeds, but this Autumn what new seeds there are have not arrived from the growers; and what renders the situation more annoying is the very small stocks in many cases on hand, which makes it almost impossible to fill an order of any size or elaborate in varieties wanted. One reason for the very early Southern demand for seeds (apart from their early planting season) is the fact, that owing to climatic conditions in many parts of the South, seeds must be of new crop to germinate satisfactorily; in other words, Southern dealers having learned this truth, carry from year to year much closer stocks than Northern seedsmen, and are, therefore, when their season does open, very urgent buyers of seeds.

I will say just a word or two about seed testing. Those dealers who make a large department of seeds will do well to thoroughly test all lots carried over from last season. The test in earth is the best; and the most convenient way and the surest is to get your nearest florist having a greenhouse to do it for you. Have twenty-five seeds of each sort sown, and by multiplying those that sprout by four will give you the percentage of germination of each variety tested.

Grass and clover seeds are steadily advancing and from the present outlook will be the highest next Spring they have been in years. Even now the best timothy is nearing \$4 a bushel, and customers consider it a great hardship to pay 20c. and over, a pound, for clovers. Red top, blue grass, and the natural grasses are also not lagging behind. High rates for all seeds are certainly ahead.

IMPORTS OF SEEDS.—The total value of the seeds imported into the United States for the year ending June 30, 1906, was \$5,388,043, as against \$3,457,619 in 1905 and \$3,587,460 in 1906. The countries from which the most of the seeds were obtained during 1906, and the value thereof, are as under:

Flaxseed or linseed:	
Canada	\$3,471
United Kingdom	62,787
Other countries	7,156
Other than flaxseed or linseed:	
Argentina	\$88,332
Austria-Hungary	\$5,518
Belgium	48,581
Brazil	59,571
British Australasia	58,112
Canada	823,429
Denmark	27,010
France	709,898
Germany	1,759,775
Italy	259,307
Netherlands	249,102
Russia, European	10,033
Spain	24,106
Turkey, Asiatic	22,238
Turkey, European	56,679
United Kingdom	952,055
Other countries	80,874

European Notes.

The Indian Summer fizzled out with the last days of September, and judging by the nondescript mixture which has succeeded it there is no immediate prospect of a revival. While, however, the frequent showers hinder our threshing operations in the open, the rain itself is most welcome and a continuance of it will remove the causes of anxiety respecting our 1908 crops as expressed in last week's notes.

Clover seed dealers will learn the news with some degree of regret, as a continuance of fine bright weather for another fortnight is absolutely essential for the development of the seed. As feeding stuffs of every kind are very valuable just now, farmers will not sacrifice a crop of clover hay, even if in moderate condition, for a speculative crop of seed.

Henry Mette, Quedlinburg, died on September 28, after a long and painful illness. He was quite a young man and was highly respected at home and abroad. The firm will continue as hitherto.

Italian crops are now coming to hand in good shape, but stocks of the principal articles, particularly onion, have been exhausted to make present deliveries. As the weather is still fine in Italy there will be very good crops of the later ripening seeds and the growers will thus, to some extent, be recompensed for the heavy losses sustained by the eruption of Vesuvius last year.

The widow of Hermann Christian Baartman, bulb merchant of Sassenheim, Holland, who was drowned in the wreck of the steamer Berlin on his homeward journey through England from the United States, has been awarded £1,500 (\$7,500) compensation.

Whether it be the result of an effort to mend Mendelism, or a study of the sex problem, or whether the suffragette movement is responsible, the writer heretofore knoweth not, but according to the advertisement columns of your British contemporaries the sweet pea "King" of Olde Englande has developed a Queen Alexander and thus knocked the spots out of creation.

Carl Cropp, of Chicago, after taking in Kew, the Royal Horticultural Society's exhibition and many other matters of interest in and near London, has left for Rotterdam on his way home per steamer New Amsterdam. He is the last of our visitors this year to leave us. We hope he will come again.

EUROPEAN SEEDS.

THE GERMAN VEGETABLE AND SEED CROPS.—Bruno Herzog, Ltd., has sent out the following report regarding seed crops in Thuringia and Province of Saxony:

Peas had to suffer considerably from the excessively wet and sunless Summer, from especially from the effects of disastrous hailstorms accompanying the heavy thunderstorms which were remarkably frequent in their appearance last Summer. As a whole the pea crop may be regarded as a fair one as to the yield; the quality, however, is greatly impaired by the wet weather which made the peas in the pods, hanging low on the ground, sprout. Samples of the first deliveries average 20 to 40 per cent. pickings; some later sorts will probably turn out worse. A brisk demand consequently set in; early round-seeded sorts are eagerly asked for and prices will no doubt advance.

Beans.—French Dwarf Varieties.—These promised to do well in the beginning but their growth was checked by the cold weather. Blight and various sorts of fungi spread over the fields, leaves and pods dropped off, so that the fields make a most deplorable show. Late sorts such as Canadian Wonder, etc., are in most cases a total failure. Earlier sorts are a little better.

Scarlet Runner Beans.—They bloomed freely but did not pod off sufficiently. Less grown than other years owing to last year's low prices.

Onions and Leeks.—With a bad start in the Spring, these made but very little progress during the sunless Summer. Partly diseased and knocked down by storms, the heads could not fully develop, remained small and began only to bloom in the middle of August, whereas in other years the heads were ready for cutting at the end of August. Old experienced onion seed growers regard this season as quite as unfavorable to the crops as in 1902 when the seeds were ripening very late too and did not show more than 40 to 50 per cent. germinative power.

Radishes are looking well so that a fine crop and good samples can be expected if the weather is fine during harvest.

Stokes' Standard Seeds.

R. VINCENT, Jr. & SONS CO., White Marsh, Md.

Mangolds and beet are well developed and largely grown; in some parts blight appeared.

Cucumbers and Vegetable Marrows.—Cucumbers are with a few exceptions a total failure; marrows look satisfactory.

Spinach.—Large areas of Winter wheat being destroyed by the severe Winter; growers have sown more spinach than usual; a crop of middling yield is assured.

Lettuces are making little progress for lack of warm weather.

Mignonette.—Less grown than usual, but looking very promising.

Nasturtium.—The small quantity grown in the country is all right.

Carrots, cabbages, swedes, turnips, parsley, parsnip, etc., for seed, are hardly to be seen in the seed-growing districts this year; the hard snowless Winter having killed nearly all the plants.

HEINEMANN'S 1908 NOVELTIES.—F. C. Heinemann, Erfurt, Germany, is offering the following novelties for 1908: Viola tricolor maxima; Pansy "Eros," of a deep velvety brown color, with a broad yellow margin; three new colors in the Emperor salpiglossis—Faust, black; purple brown with gold; and lilac with gold; new dark shaded Princess pinks; Gloxinia hybrida crassifolia crispa "Meteor" and Lathyrus odoratus Præcox, new early flowering sweet peas.

A Gardener of the Old School.

The late Edgar Sanders, in an article contributed to a daily newspaper in Chicago some years ago, in which he gave his reminiscences of the gardening craft in that city, quotes the following interesting description of an old-time gardener familiarly known as "Old Tom," on the Egan estate, kindly supplied to Mr. Sanders by Wm. C. Egan:

"His powerful lungs gave him a voice that could reach any part of the grounds, and there are many now living—in manhood grown—who can still recall that warning yell that always greeted any attempt to steal his flowers or tread on his beds. Notwithstanding a devotion to our family almost amounting to blindness, we dared not pick any of his favorite flowers without his permission. Not educated in a technical school, he spurned all Latin names. If one told him that the geranium he knew was a pelargonium he would give the relator a withering look, and, turning away, would say in his actions: 'I won't argue with such a fool.' He had never heard of pistils and stamens, yet he knew each plant by heart—knew their wants and tended to them with zeal and faith—could nurse the weak and encourage the strong. He understood each plant from its seed germ to old age and decay. He was an observer and loved his craft—there was the whole secret of his success.

"No one ever knew his age. He was an old man when he came to us, and soon received his name of 'Old Tom,' by which he was known for the forty years he was with us. His devotion to my mother was genuine and true. Whenever she went away on a visit, it was a question whether he wept more in sorrow at her departure or with joy on her return.

"He had an aversion to water—except for drinking purposes and watering plants. During the holidays he would turn over a new leaf and for a week or so would look clean and bright. He was quite bald, and here the dust seemed to delight in settling. He could see his hands, and when they became too black would wash them, but the top of his head not being visible, he never thought of it. We had all the barbers in the neighborhood under pay unknown to Tom. He got shaved every Saturday, and once in a while some barber could induce Tom to let him give him a free shampoo, which we paid for. Once or twice a year the old man would have his spree, ending up by swearing off and, as an evidence bury the bottle, but, like his plants, it came up in seasonable time.

"These turns always ended in a week's sickness, and, while in bed under the doctor's care, we took the advantage of having him well scrubbed. He had queer ideas of medicines; he thought that if one pill did him good, ten would do more good, and, acting under that impression, he once took nearly a dozen of strong cathartic pills, and we had to call in the doctor to save him from going to pieces. Once he had noticed us mixing a seditz powder—first putting into a glass a powder from the blue paper and then the white, and giving it to him while effervescing. He liked it so much that when no one was in the room he thought he would make a decoction himself, so he put the blue powder in one glass of water and the white in another, and swallowed each separately. You can imagine the commotion within him.

"We kept him until death claimed him, although his usefulness had departed long ago. He died suddenly at the breakfast table from heart failure and is buried in Calvary."

West End, N. J.

F. Ambacher is adding a new house to his already prosperous looking plant on Brighton avenue. It is only a few years ago that Mr. Ambacher moved to West End from Long Branch, and he is in every way pleased with the change and the better prospects for business in his new location. The existing plant is composed of four 100 x 40 foot houses; the one in the course of erection is not as large. A new boiler is being installed and the entire place is having a general overhauling.

The Winter trade with the florists along the Jersey coast is reported to be light and the time during that portion of the year is consumed by preparing for the heavy Spring business. Geraniums, coleus and all other classes of bedding plants are used in large numbers by all the resorts along the coast. The season opens early by planting perennials, and tender plants are sold and planted until very late in the season.

The New Gigantic Orchid Flowering Cosmos
LADY LENOX

Awarded a 1st Class Certificate of Merit by the New York Florists' Club, Oct. 14, 1907, also at Lenox, Madison, and Morristown.

THIS GIGANTIC COSMOS is the forerunner of an entirely new race of **Cosmos**. It is of **extraordinary** size and beauty. Visitors to the floral exhibitions last autumn were **enraptured** with its **size** and **magnificent color**.

SIZE OF FLOWER—5 to 6 inches in Diameter. **COLOR**—A delightful **shell-pink**, lighting up beautifully at night. **FORM OF FLOWER**—Oval petals of **splendid substance**, forming a perfectly circular flower which, when cut, lasts an **unusual length of time** in water. **HABIT OF PLANT**—Strong and vigorous, growing 6 to 7 feet high. A grand cut flower variety.

Under date of October 16, 1906, Messrs. C. C. Morse & Co., Seed Growers, of San Francisco, California, write us as follows: "Your new **Cosmos**, **Lady Lenox**, is now in full bloom. We are pleased to say it is one of the handsomest varieties of **Cosmos** that we have ever seen. The flowers are very large and full and the color is a very beautiful light pink. We would be glad to know what price you would be willing to make us for a quarter of a pound."

Flowers of this **Cosmos** will be exhibited at all the leading flower shows in the United States, Autumn, 1907

Per Pkt. 25c. 5 Pkts. for \$1.00

United Kingdom	95,513	106,326	103,720
Other Countries	35,993	36,303	65,593

Akebia Quinata from Seed.

We have an *Akebia quinata* vine that is full of seeds this year and we would like to plant them, but know nothing about when, or how they should be planted. Will you kindly inform us about this through The Florists' Exchange, and oblige. S. H. M. Oregon.

—The *Akebia* is raised altogether from cuttings and layers here, green cuttings in Summer, put in the greenhouse, and layers from plants in the open ground in Summer. The vine fruits here occasionally, but its increase is so easily accomplished in the way described that there is no need to try increasing it from seeds; and, as a fact, I have never sown any. Still, were the case mine I would wash the seeds free of pulp, keep them in a cool, dry place for a month or so, then sow them in a box in a greenhouse. Should this not be convenient, mix the seeds in slightly damp sand, and sow outdoors in the early days of Spring. J. M.

Biota Aurea Nana.

An uncommonly beautiful little evergreen and one well suited for florists' trade as a pot plant is the new dwarf golden Arbor vitae, *Biota aurea nana*. It belongs to the Chinese Arbor vitae section, having a dwarf, pyramidal growth, just of the shape so many desire plants to be that are grown in pots for decorative purposes. Many florists are acquainted with the common golden Arbor vitae, a compact grower and of somewhat pyramidal habit. The new one—*B. aurea nana*—is more pyramidal, having less diameter of base in proportion to height, and its color is thought to excel the older one in its bright golden tints.

The thick habit of these golden Arbor vitae makes them suffer in their southern exposures in severe Winters. The sun starts the sap into activity, in the day, then comes the cold, perhaps zero weather, at night, the extremes of temperature causing the injury. Where plants are less bushy the air gets through the foliage easily and in this way the southern fronts do not become so heated in midday as they do otherwise. Because of the injury from the sun, it is a help to give shade on the sunny side whenever it can be done.

Hardiness of the "Hardy" Orange.

When mention is made to a customer of a hardy orange there is always much interest manifested by the party informed, the fact that there is such a fruit exciting great surprise to those unacquainted with the fact. Of course, it is to be understood that the fruit of this orange is not of an edible nature; it is too bitter and with but little flesh. Nevertheless it is a true orange. And no doubt it can be added that it is the forerunner of a race that will be edible, for there is nothing in the way of hybridizing it with sweet sorts, seedlings of which will combine hardiness with sweet flavor. This has already been accomplished to some degree, seedlings having been produced which will endure more frost than those known before, and which bear good fruit.

The fact is, that there is more hardiness now in many oranges and lemons than is supposed, for cases of seedlings of these fruits which have sprung up in gardens from seeds thrown there enduring Philadelphia Winters are not unknown.

The hardy orange, as it is called, is *Citrus trifoliata*; and this is positively hardy to New York City at least. Young seedlings with green unripened wood will suffer in very cold Winters; so will seedlings of many native trees, but no injury occurs after the wood becomes hard. It is an ornamental bush or small tree, attractive when in flower and when in fruit; and it forms a more impenetrable hedge than osage orange or honey locust.

Vegetation Under Walnut Trees.

In years past it was the common saying, not to say belief, that the presence of a walnut tree near a dwelling was not conducive to the health of the inmates, and even to-day the same opinion is heard expressed at times. The reason for the belief appeared to be that trees and shrubs planted under such trees rarely thrived, that a mysterious something about the tree prevented this. That many shrubs do not do well under walnuts is a fact; it is also a fact that the water dripping from walnut trees is injurious to tender foliage, and it is this in all probability that has led to the belief many entertain that it is not healthful to be near such trees. Gardeners of the old school may remember when walnut leaves soaked in water produced a liquid that killed aphids on the foliage of plants, just as tobacco water does to-day. Observers have noticed that plants growing on the outskirts of the spread of a walnut tree will have their tender foliage hurt when rain falls from the tree upon their foliage in early Spring. The branches that catch the rain drops will suffer, but not those outside of the circle. Later in the season, when foliage hardens, the falling water does not seem to hurt the plants.

Dwarfing Herbaceous Plants.

One of the objections made to the beautiful *boltonias* as well as to some other herbaceous plants is they grow so tall that they are unable to sustain themselves without staking. This is true of these plants when strong ones are in mind and when they are let grow

in the case of large collections but little else can be done excepting that where evergreen boughs are available they are very useful spread over the tops of the plants. The more completely sunlight can be kept from the foliage the better for the plants, for strong light, high winds and dryness at the roots are the main reasons why rhododendrons suffer. It is not uncommon to see gardeners protect the north side of their rhododendron beds with hurdles or straw mats, of undeniable benefit; but whether more than the plants would receive were the mats on the south side is doubtful. High winds are harmful, but not to a great degree when the soil is full of moisture to make good what the plants lose by transpiration, while intense light is known to cause a great call on the moisture of the plants besides preventing their recovery from the effects of heavy freezing.

Purple Barberry True from Seed.

Owing to its hardiness the common *Berberis vulgaris* as well as its variety, *purpurea*, are much sought for in Canada; even the Manitoba nurserymen look on it as one of a few shrubs they can grow. Looking to the raising of a lot of seedlings of the purple-leaved one, a Quebec correspondent wrote me recently asking if the seedlings of it came true. This they do, practically. In a bed of hundreds of seedlings a few will be found of the common green-leaved kind, but the great majority of the seedlings will be the true purple. As the green-leaved ones are easily separated from the others there is no reason why this easy way of increasing the stock of plants should not be followed.

While true that varieties cannot be relied on to come true from seed many of them can, practically, and very many varieties are so raised. The barberry referred to is one, the purple beech is another, and even the pyramidal European oak and many weeping trees can be relied on to furnish a fair lot of the true variety. And then, among the fruits there is the Smock peach, which has long had the reputation of coming true from seed. No doubt there are many other cases where the same thing occurs.

To return to the subject of the Canadian's inquiry, the writer told him to go ahead and sow the berries of the purple barberry.

It is worth saying here, that barberry seeds require sowing or mixing with damp soil very soon after they ripen.

Reviving Obsolete Names of Plants.

The subjoined extract from Gardening Illustrated from the pen of B. M. Syme, will meet with the hearty approval of a large number of the horticulturists of this country. The attempted changing of many names has caused endless confusion to a large body of nurserymen who have carried plants under certain names for over half a century in their catalogues. A street becomes a public highway if used for 21 years, unobjected to by its owner; a debt is outlawed if not claimed in 6 years, and the safeguard of society demands such laws. Here are names of plants unobjected to for over 100 years which we are now told must be changed. Surely if ever a claim deserved to be outlawed it is this.

The logic of B. M. Syme's notes seems to be unassailable. They follow:

"Some botanists seem to consider it a meritorious act to rescue a forgotten name from oblivion, and look upon such discovery as being of almost as much benefit to science as the detection of some overlooked specific character. Such authors appear to forget that names are merely arbitrary terms to represent the plants to which they belong. The rule that, when a species is already known by two or more names the earliest given of these is to be adopted, is agreed to solely as a means of attaining unanimity in nomenclature; but the revival of an obsolete appellation by which no one knows the plant, is only producing, instead of avoiding, confusion, and should be discouraged to the utmost."

JOSEPH MEEHAN.

NEW HYBRID FREESIAS.—The Revue Horticole presents in its October, 1907, number a colored plate of some hybrid freesias, running from lively rose to violet rose, salmon and other hues. The new freesias were obtained by Dr. Attilio Ragionieri, of Castello, near Florence, and are crosses of *F. refracta*, *F. Leichtlini* and *F. Armstrongi*. The stock is in possession of M. Charles Brüggemann, horticulturist, Villefranche-sur-Mer, France. None of the new varieties has yet been named.

Field of *Biota Aurea Nana*
Growers, P. J. Berckmans Co., Augusta, Ga.

as they will. But this tallness can be overcome by topping their growth at any time before their flower buds show, as this both dwarfs them and makes them more bushy. Many catalogues say of *boltonias* that they need no staking. This is true of headed-back plants or of small plants set out in Spring. Spring planted stock does not make such tall growth as plants do that have been in position for some time. This can be noticed in the case of asters, phlox, coreopsis, and many similar plants.

No doubt all herbaceous plants that do not flower until after July could be headed back to their advantage in the way of bushiness, and with bushiness comes the ability to sustain themselves without any artificial aid in the way of staking.

Protecting Rhododendron Beds.

It is not too early to consider the protecting of rhododendron plants in Winter, for already white frosts are reported in many nearby places, and although it will not be necessary to give protection to the plants for two months yet, it will be advisable to make provision for it.

There are two things to be well understood in connection with the preservation of rhododendrons in Winter, viz., that darkness is the main object desired, darkness and protection from high winds. With these provided for and with an abundance of moisture in the soil, it hardly matters how low the mercury falls, the plants will not suffer.

Presuming the plants are in well drained ground, the first thing to see to in the line of protection is that there is abundance of moisture in the soil. Should there not be, and it were possible, the bed of plants should have a thorough soaking with water. Next should be a thick mulching of the ground with forest leaves, to the depth of even a foot if possible. Then will come the exclusion of sunlight as far as can be done. In the case of a few plants, this is not difficult to do; there are straw mats, hay, leaves and like materials, which can be spread over the foliage and kept on by branches of trees or by other means, and even

THE WEEK'S WORK.

Lilium Harrisii.
Lilies pushing well forward for flowering in Midwinter require close attention from now on; they need careful watering, a growing temperature of about 60 degrees in a light house. Keep the plants in a healthy growing condition, but also be doubly sure of keeping them clean by frequent fumigations with whatever material is found to be the most effective. It pays in the end to look sharply to see if any plant here or there needs water at other than the regularly appointed times for attending to their needs in this particular.

Ferns.
Dishes filled with pteris of many different varieties as well as of one variety, and dishes filled with various other kinds of ferns have been, and no doubt always will be, in demand, but the time is coming when nice shapely plants of medium size of nephrolepis in several of the newer varieties will be used extensively for that purpose. N. Whitmani is in every way especially suitable for the kind of work referred to in sizes well filling 5-inch pans, and the still newer varieties, N. todemoides and N. Amerpohl are in no way inferior in make up and they will, in a very little while, be found filling like positions with

much acceptance. Keep turning the plants and give every one as much room as possible.

It has on more than one occasion in these columns been advised that it would pay in dollars to give particular attention to the development of fairly large specimen ferns of the improved Boston, and this can be done by placing all plants showing the makings of good specimens in the near future on pedestals or on inverted pots, or what may answer the purpose equally well—temporary shelves erected over the benches. Any of these provisions will allow the fronds of the plants to hang down gracefully, and will help wonderfully in bringing them to a finished condition.

Callas.

Callas respond to generous treatment as readily as anything I know, and they as readily, by their appearance, show resentment if they lack nourishment. Liquid cow manure applied frequently will help them immensely in the production of large blooms. A temperature of about 55 degrees suits them.

Mignonette.

Mignonette will not succeed indoors if grown in a temperature over 48 degrees at night. A few degrees less will suit it, but anything over that will be ruinous to it. Keep the soil in the bench sweet and mellow by frequent stirring of the surface.

Bouvardias.

Bauvardias intended for early use should now be in a temperature of from 68 to 70 degrees at night; a few degrees higher in the daytime will be to their liking, and will encourage them to push up blooms and continue to do so without interruption as the plants continue to make growth. By bringing plants of bouvardias in batches into the temperature suitable for forcing them, a succession of plants in flower in good condition in pots will be comparatively easy. They require close and unremitting attention in the matter of keeping them free of insects.

Lilacs.

It is important that lilacs intended for forcing should be well furnished with flower buds, otherwise much of the time and labor expended in their preparation and subsequent treatment in forcing will have been in vain. Flower buds on lilacs are distinguishable much in the same way as flower buds on peaches and

nectarines are distinguished from wood buds, in that they are more plump and globular in appearance.

Geraniums for Pot Culture.

While many of the varieties of geraniums now grown for outdoor planting make nice plants for pot culture for sale during the Winter and Spring by retail growers and florists, it will pay to obtain a stock of some of the finer varieties for this purpose. It has been repeatedly stated that anyone can grow a geranium, but to grow a geranium well it requires just as much attention to detail as does the growing of many other things commonly supposed to be much more difficult to successfully produce. Geraniums intended for sale for dwelling house ornamentation must not be ordinary stock such as is turned out by the thousand in the Spring; the plants must be stocky, yet luxuriant in foliage, with large trusses of bloom visible and signs of more in the bud. To produce such plants it will be required that after they are rooted, which they should be in small pots, they will not suffer from want of water or pot room until they have attained the size at which they are to flower. The plants should be shifted from one size pot into another whenever their roots show well through the soil and before they get severely pot bound.

Antirrhinums.

It is almost useless attempting the growing of profitable flower spikes of antirrhinums from old plants lifted from outdoors and that have flowered to any extent through the Summer. Antirrhinums in benches, as well as those grown in pots, respond freely to high cultivation in the matter of soil and feeding. The aim should be to do everything possible to make the plants throw up long spikes, otherwise, even in the middle of Winter, the flowers produced will hardly pay for the labor expended on them. Frequent stirring of the surface of the soil is appreciatively enjoyed by antirrhinums indoors as well as outdoors.

Perennials and Biennials for Forcing.

The forcing of many kinds of perennials as well as of biennials is in the near future destined to become much more common than it is to-day. It is a great mistake, however, to suppose that all that is necessary to do in the way of preparation is to have whatever of these plants as may be thought of for forcing lifted indiscriminately from the open border and put into heat. On the other hand, just as much care and judgment are required in the selection and subsequent treatment of perennials as there is for the successful management of lilies and the various other things now extensively and profitably grown. Probably the first and main consideration in starting out in the growing of such plants for Winter forcing, is that all plants or clumps lifted have been of normal growth and thoroughly matured in the past season's growth, and with that growth ripened naturally. Young stock, or stock that can be called such, comparatively, is, as a rule, much better adapted for forcing than aged material with roots firmly, extensively, and deeply embedded in the earth.

Next comes the potting, wherein care is also a necessity for success. Although, as a rule, it is not advisable to use pots for dug-up clumps of much larger capacity than that actually needed for the comfortable accommodation of the roots adhering thereto, still it is much better to be on the safe side in the matter of size than to mutilate the roots by the forcing of them into receptacles much too small for them. Another important point is to leave pot space unoccupied by soil for the reception of a sufficient quantity of liquid every time the plants receive water, and not have them starved because of the necessary dribbling that would be the result if such provision had not been made.

GROWERS OF CHRYSANTHEMUMS WHO HAVE MORE STOCK PLANTS THAN THEY NEED, WILL FIND A READY SALE FOR THEM BY PLACING AN ADVERTISEMENT IN THE FLORISTS' EXCHANGE.

FALL SPECIALTIES LATANIAS

We have large blocks of the following plants, valuable to every florist:

CANTERBURY BELLS. (Campanula Media)—Grand for Winter and Spring flowering in pots. Strong, field grown plants in Blue, Rose or White—\$5.00 per 100.
BOUGAINVILLEA GLABRA SANDERIANA. One of the grandest market plants, much in demand again. Compact, well trained specimens, sure to bloom. 4 inch pots, \$2.75 per doz., \$20.00 per 100. 5 inch pots, \$3.50 per doz.
CELESTIAL PEPPERS. 4 inch pot-plants full of young fruit. \$12.00 per 100.
ASPARAGUS SPRENGERI. Field-grown, bushy plants, ready for 5 inch pots, \$10.00 per 100.
DRACAENA INDIVISA. Field-grown, 4 inch pot size, \$10.00 per 100; 5 inch, \$15.00 per 100; 6 inch \$25.00 per 100.
HYDRANGEA—OTAKSA and HORTENSIS. Strong, bushy, well-grown plants from field, the finest we ever grew; \$12.00 per 100. Lighter plants, 2 flower shoots, \$8.00 per 100.
PEONIES. Send for special Peony circular, if interested.
AZALEA INDICA. Best market varieties only. No assorted case lots. Let us know your wants.
FERNS for dishes, fine little plants of good varieties, \$2.50 per 100.
BOSTON FERNS. 5 in. pot, \$35.00 per 100, 6 in. pot \$30.00 per 100.
NEPHROLEPIS ELEGANTISSIMA and WHITMANI. Fine short stock, 5 in. pots, at \$50.00 per 100, 6 in. pots at \$75.00 per 100.
 Send for catalogue No. 5, describing full list of Florists' Bulbs, Seeds, Plants, etc.

ROBERT CRAIG & CO. ROSES, PALMS, CROTONS

CARNATIONS and Novelties in DECORATIVE PLANTS

Market and 49th Sts. PHILADELPHIA, PA.

Plant for Name.—O. A. C., Mass.—The begonia sent for name is B. Thurstonii.

Flower for Name.—I. Est., N. Y.—Passiflora sanguinea; syn., Tacsonia Buchananii.

(50) **Leaf Spot on Chrysanthemums.**—Please tell me what the trouble is with my chrysanthemums. Some of the early ones are all spotting like the leaves sent. We gave the plants the same culture they had last year and we were not bothered then—had fine plants and no disease. BEGINNER, New Jersey.

—The leaves of the chrysanthemum sent for examination were affected with leaf spot. For information regarding this disease, see page 499, issue of October 12, 1907.

(51) **Violets.**—Kindly give comparative value of the following single violets as to blooming propensities, size, color, odor, health, fullness and market value. Also state any peculiarities in growth or treatment in the different varieties—Governor Herrick, La France, Dorsett, Princess of Wales, California, Farquhar and Luxonne. As to double violets, name the best and their peculiarities and treatment. W. R. L. D., Ohio.

—Will some violet grower who has had experience with all of the above varieties, kindly give the information desired?

(52) **Carnation Soil.**—If I take the soil that was used for carnations last Winter and spread it about eighteen inches or two feet deep outside and sow with grass seed, would it be all right to be used next Winter (1908) for carnations? W. A. P., Maryland.

—The old carnation soil if spread eighteen inches or two feet thick over a piece of ground, sown with grass seed and allowed to stay there until next Summer, would not be fit for bringing into the greenhouse and using for carnations the following season. To get this soil fit for greenhouse purposes again, it would have to be spread over the land rather thinly—say four or five inches thick at the most—and allowed to remain outdoors not less than three years.

(53) **Wintering Dahlia Roots.**—Kindly let me know how to keep dahlia roots in good condition over Winter. I have put the clumps on the floor of a frost-proof cellar during former Winters, but the roots always shriveled up to less than half their original size, many not being fit to plant at all. Would it do to divide the clumps and pack the tubers in sawdust? H. S., New York.

—To keep dahlia roots in perfect condition throughout the Winter, they should be placed in a frost-proof shed or cellar, and covered with sand or very fine soil. Do not divide them by any means, nor attempt to put them in sawdust; just keep the clumps as whole as possible, lay them on the floor of the cellar and work in sand or dry soil around and above them. This keeps the air from drying them too much, and preserves the clumps plump and nice.

(54) **Time to Sow Dracaena Indivisa Seed.**—Please tell me the right time to sow seed of Dracaena indivisa and something about how to grow it. New York. S. A. P.

—The seed of Dracaena indivisa may be sown at any time when fresh seed can be obtained, though the month of January is preferably the best, as there is plenty of heat at command at that time, and for several months, so that the

JULIUS ROEHRS CO.
 RUTHERFORD, N. J.

THE TRADE ONLY—When Writing Please Mention THE FLORISTS' EXCHANGE.

young plants can be brought along quickly. No greenhouse plant is easier to grow than *Dracena indivisa*. Sow the seeds in flats, the same as is done with any other kind of seed; place the flats on a bench where there are pipes underneath, and in a house where a temperature of 60 degrees at night is maintained. As soon as the seedlings are large enough to handle, transplant them singly into 2½-inch pots, using a soil similar to that given for young roses. Before the plants become root-bound, shift into 3 and 3½-inch pots, and when warm weather arrives in Summer, if it is desired to make as big plants as possible, plant them outdoors, two feet apart, in well enriched ground. Keep them watered well during the Summer, potting them up and bringing them back into the greenhouse early in September. By this method good-sized plants can be had in a short time.

(55) **Growing Parsley and Lettuce for Market, etc.**—Will you kindly inform me in regard to growing parsley for the market, what kind of soil is necessary and how hardy is the plant? Are the leaves only cut for sale, or is the plant offered—that is, for garnishing and table use? What size should the leaves or plants average and what is the average price? What distance might it be shipped?

Also, in regard to the growing of lettuce plants for wholesale—are they once transplanted before being offered for sale? What size would they have to be? What is the manner of packing to ship? Would cabbage plants be handled in the same way? Would there be a demand for Bermuda onion seedlings in January for forcing or growing on in greenhouse or in cold frame? A. J. B.

Florida.

—Parsley is only used for garnishing dishes and for seasoning; consequently, there is never any great demand for this vegetable compared with the demand for lettuce, cabbage, etc. To grow parsley a rather heavy soil is always desirable. It comes from seed, but is usually rather slow in germinating; nevertheless, by seed is the only way to obtain a stock of plants. It is only the leaves that are used and offered for sale, and these are ready for use any time after they have become three or four inches long. What the average size of the leaves would be could hardly be told, as the plant varies so under different conditions; neither have we any means of knowing what the average price would be in any market. As to shipping qualities, we think that parsley would ship much better than any other vegetable or fruit; anyhow, it would carry all right to whatever distance any other vegetables could be safely carried.

Regarding the growing of lettuce plants for wholesale, they would certainly have to be transplanted at least once before they could be shipped with any degree of safety. A lettuce plant from seed, once transplanted and to be used for growing on, could not be described by specifying its size in inches. The method of packing the plants for shipment would have to be somewhat similar to that used in packing rooted carnation cuttings—packed with wet moss around them to keep the roots moist, and in boxes shallow enough so that one layer of plants only is used. If lettuce plants were packed closely one on top of the other, the leaves would decay in a few hours and the plants be worthless when they reach their destination.

Cabbage plants could be handled in a manner similar to the lettuce, and, without a doubt, would find a much better market, as many people growing and requiring cabbage plants have no glass at command, while lettuce growers usually have some glass, but would raise their own plants from seed much more satisfactorily than if they bought them at a distance, as the chances of their arrival in good shape are not very good.

It would also seem to us that there could not be much of a demand for Bermuda onion seedlings in January, for the simple reason that those who could force them in greenhouses or cold frames through the Winter have good facilities for raising the onions from seed.

(57) **Cost of Fumigating.**—What should be the cost of fumigating 50,000 feet of glass for the season, 25 per cent. of the glass in roses, balance in carnations?

What should be the cost of heating same with hot water, using hard coal? Outside temperature sometimes as low as

Dreer Specials in Ferns

PTERIS WILSONI We feel very enthusiastic over this fern; it is not only the most graceful, but also one of the hardest of the crested forms of *Pteris*, useful in fern dishes as well as for growing on into specimen plants in 6-inch pans; in this size it appeals to every buyer and meets with ready sales. We have a fine lot of 6-inch pans, \$4.50 per dozen; \$35.00 per 100; 3-inch pots, \$6.00 per 100.

Adiantum Farleyense A fine lot of 6-inch pots now ready, \$1.00 each.

Adiantum Rhodophyllum The miniature Farleyense, as it is sometimes called, very fine plants,

3-inch pots, \$10.00 per 100.

Adiantum Macrophyllum The bronzy red or almost crimson foliage of this variety during the

Fall months appeals to all. This is the first time we have been able to offer it in quantity and at a popular price; fine 3-inch pots, \$15.00 per 100.

Adiantum Croweanum We offer a fine lot of this, the most useful and profitable of all the Maidenhair

Ferns for cutting; fine 3-inch pot plants, \$2.00 per dozen; \$15.00 per 100; \$140.00 per 1000.

Nephrolepis Amerpohlilii—The Philadelphia Lace Fern—This is the latest addition to the Ostrich Plume type and is certain to prove a welcome and popular variety, holding for delicacy and gracefulness the same position among the *Nephrolepis* that *Adiantum Gracillimum* does among the Maidenhair Ferns. The pinnae are so finely divided that it reminds one of a piece of fine lace; the fronds are broad and of a depth which gives them a cushion-like appearance. It forms a beautiful specimen and is admired by everyone who sees it. 60c. each; \$3.50 per dozen; \$25.00 per 100; \$200.00 per 1000.

Nephrolepis Todeaoides—Todea, or Filmy Fern-like *Nephrolepis*. This is an English introduction that has received a first-class certificate both from the Royal Horticultural Society and from the Royal Botanic Society of London, and is likely to become a most important commercial variety. While in a general way it reminds one of an exceptionally well-grown plant of *N. Elegantisima*, it is entirely distinct from this and all others, in its strong yet compact growth and its bold heavy foliage, which is distinctly tripinnate or three times divided. Specimen plants which we now have growing are admired by everyone and we have great faith in its future. 4-inch pots, ready Oct. 1st 50c. each; \$5.00 per dozen; \$40.00 per 100; 6-inch pots, ready now, fine plants, \$1.00 each.

A fine lot of Ferns in 3-inch pots, assorted varieties for Fern dish work. \$6.00 per 100, \$50.00 per 1000.

Asparagus Plumosus Nanus 2½ in. pots, 60c. per doz., \$4.00 per 100; 3 in. pots, 85c.

per doz., \$6.00 per 100.

PTERIS WILSONI

HENRY A. DREER, 714 Chestnut St., Philadelphia, Pa.

5 degrees below zero, houses in good condition. SUBSCRIBER.

(57) **Forcing Narcissus.**—What is the best treatment for *Narcissus Double Von Sion* and *Golden Spur*? We wish to force them in flats for cut flower purposes and would like to know if these varieties require any different treatment from others, and how soon they can be successfully brought into bloom. T. N. Y. & Co.

Pa. —To force *Narcissus Golden Spur* and *Double Von Sion* requires no special treatment different from what is given other varieties of narcissus. The best plan is to plant the bulbs in flats, using a good, clean soil that has been fairly well fertilized and after the planting is finished, either bury the flats in trenches outdoors, or place them in a cold bulb house or cellar where it is perfectly dark. Let the flats remain until the beginning of the year, when they may be brought into a warm house and forced into flower. From the time they are introduced into the greenhouse and the flowers are ready to cut, it will take about twenty-eight days for the first batch in January, and later batches can be brought into bloom a few days earlier as Spring approaches.

(58) **Orange and Bay Trees.**—Kindly give me the best treatment for orange and bay trees. Orange trees have scale on leaves and stem. What can I do for this? Is now the right time to change the soil in the tubs, and what kind shall I use? Would liquid cow manure be the right thing for them if applied once a week? G.

Pa. —If the stock of orange and bay trees is not large, the best plan would be to take some whale oil soap—say two or three ounces to a gallon of warm water, and sponge the leaves thoroughly. Afterward they can be kept clean by a regular syringing of clear water. If there are too many trees to admit of their being sponged separately, take the whale oil soap at the rate of four ounces to a gallon of warm water; mix thoroughly, and syringe every particle of the trees. Repeat this several times, at intervals of three or four days, until the scale and dirt are all loosened and will wash off easily. It should be understood that syringing with clear water must be done on the day following that on which the soap has been used. The repotting of the oranges may be done at any time, as the plants are never really dormant. A good soil for them is one

THE FLORISTS' EXCHANGE, Franklin & St. Paul Sts., Baltimore, Md.

similar to what is prepared for roses—four parts of good, fresh loam and one part of well decayed stable manure. If the loam is inclined to be very heavy, however, it is a good plan to mix enough coarse sand with it to make it drain easily. If the plants are repotted, there would be no need of feeding them with liquid manure, but the latter is very useful if one wants to carry the plants over a season after they have become root-bound, though care must be taken that the liquid used is quite weak and given not more than once in ten days. The feeding of such plants as oranges and bay trees must be governed by the condition of the plants. If they are not growing well and otherwise in a healthy condition, it would be useless to start and feed them, as such a course would only hasten their death.

POINSETTIAS

2½-in. pots, \$5.00 per 100; \$40.00 per 1000.

GERANIUMS S. A. Nutt, now ready 2 in. pots, \$2.50 per 100; \$20.00 per 1000.

special positions extra. Send for Rate Card showing
discount of 10c., 15c., 25c., or 35c., per inch on contin-
uous advertising. For rates on Wants, etc., see column
for Classified Advertisements.

Copy must reach this office by 12 noon Wednesday to
secure insertion in issue of following Saturday.

Orders from unknown parties must be accompanied
with cash or satisfactory references.

Z. De Forest Ely.

Z. De Forest Ely, formerly in the seed business in
Philadelphia, Pa., from which he retired in 1897, died
at his home in that city on September 30, 1907, of
apoplexy. He was born in Philadelphia on November
1, 1855, his father being a minister of the Reformed
Church. When engaged in business, Mr. Ely was well
known in the seed trade. He was a Free Mason. A
widow and six children survive him.

W. Judson Smith.

W. Judson Smith, for many years engaged in the
nursery business in Syracuse, N. Y., as a member of
the firm of Smith & Powell, died recently at Monrovia,
Cal., whither he had gone for the benefit of his health.
He was born in 1855, and was the son of W. Brown
Smith, the founder of the firm of Smith & Powell. He
received his education at Cornell University, and at
one time held an appointment in the Bureau of Animal
Industry at Washington, D. C. He was greatly inter-
ested in the New York State Fair, and designed the
laying out of the buildings on the Fair grounds at
Syracuse. He also was one of the organizers of the
Syracuse, Lake Shore and Baldwinsville Railroad. A
widow and one son, W. Brown Smith, survive him.

The president of the Scottish Horticultural Associa-
tion, D. W. Thomson, Edinburgh, is advocating the
establishment of a horticultural home and a horticul-
tural college in Scotland. His views have been warmly
supported in principle; the greatest difficulty was
thought to be a monetary one. Mr. Thomson also
favors the amalgamation, or corporate union, of the
present horticultural societies in Scotland.

Chicago's Flower Shows.

In recent years Chicago has become noted as a flow-
er show center, the magnitude and uniqueness of the
exhibitions held there being probably unsurpassed in
any other city of the country, not excepting the grand
shows that have once or twice been presented in
Kansas City. The handsome premiums offered and
the comprehensiveness of the classes in the schedules
have no doubt contributed largely to the condition
spoken of; but the intense interest taken by the craft,
locally and generally, in the Chicago shows, has also
been a great contributing factor.

The Fall exhibition this year promises to be a record-
breaker, and augurs well for the success of the proposed
national flower show which will take place in the
Western city in the Fall of 1908. Then in the early
part of next year occurs, in Chicago, the annual ex-
hibition and convention of the American Rose Society,
regarding which all indications point to a grand suc-
cess. All this will tend to enhance still further the
city's already widespread reputation as a successful
flower show center.

It is also gratifying to observe the interest taken
by the leading Chicago retailers in the flower shows held
in their home city. In this respect they have set an
excellent example to those engaged in this branch of
the business throughout the country. In the competi-
tive classes as well as staging stock for exhibition
only, the retail men have acted well their part, and to
their interest and efforts the attractiveness of Chicago's
flower shows has been, in a large degree, due. The
retailers' booths at the two recent shows were unique
and interesting—and profitable to those whose business
acumen prompted them to participate in the display.
The present year will see the same interest taken by
the retailers; and some novel features in this line,
as well as in the other departments of the show, are
to be forthcoming.

The committee of fifty of the S. A. F. O. H., for
the National Flower Show will hold a meeting in Chi-
cago on November 8, to consider plans for the proposed
exhibition and finally approve the premium list, so that
the latter can be sent out in good time. It is re-
quested that as many of the committee as possible be
in attendance.

PAMPHLETS RECEIVED.

AMERICAN ROSE SOCIETY.—The Annual Pro-
ceedings and Bulletin for 1907 has been distributed
by Secretary Hammond. The pamphlet, 96 pages, con-
tains a full account of the exhibition and meeting of
the society held at Washington, D. C., March 13-15,
1907, all the papers read at that time and discussions
thereon, prize list, copy of the by-laws, list of mem-
bers, etc. The visit of the rose growers to the White
House is also fully described. Many beautiful illus-
trations are shown of varieties exhibited, etc.; the por-
traits of President Simpson and the various essayists
are given, as well as the group picture of the rose men
taken after their visit to President Roosevelt.

The report is neatly printed and reflects great credit
on Secretary Hammond. It certainly is the most at-
tractive bulletin, descriptive of the yearly work of the
society, ever gotten out by the organization, and to
every grower of roses is worth far more than the cost
of the annual dues.

RAWSON'S BULB GUIDE, a Brief Treatise on the
Culture of Bulbs for Fall Planting. Published as free
literature by W. W. Rawson & Company, Boston, Mass.

This is an excellent handy booklet; every variety of
bulb included in the firm's catalogue is enumerated, the
salient points of its culture noted, and a selection of
the best and newest kinds briefly described. To facili-
tate reference an alphabetical arrangement has been
followed, and so far as the names are concerned, the
endeavor has been to describe the plants under those
by which they are popularly known. Much useful in-
formation concerning the treatment of the subjects
enumerated is provided, and in such compact form, that
the pamphlet cannot fail to be of interest and service
to all into whose hands it may fall.

**"WISE WORDS ABOUT THE MOST PROFIT-
ABLE THING ON EARTH."** is the title of a neat lit-
tle pamphlet published by E. H. Hunt, Chicago, devoted
to the subject of fertilizers and how, when and where
they should be used. Though in the form of an adver-
tisement of the special fertilizers sold by this house, it
contains many useful hints on the use of fertilizers in
general, concisely written and thoroughly practical.
"Wise Words" will be sent free to any address on ap-
plication.

OUR READERS' VIEWS

Gladiolus "Gelria."

Editor Florists' Exchange:

I notice in your issue of October 12 an article signed
by "A. C." regarding Gladiolus Gelria, and as he invites
the experience of other people with this variety, I would
like to state that some 1,200 or 1,500 bulbs of this
strain were under my observation during the past Sum-
mer, and to say that there was disappointment in them
puts it very mildly. This strain was recommended very
highly by European horticultural societies, but as far as
the writer could see, there was not a new variety in it,
they being simply a mixture of sorts that have been put
on the market by Messrs. Lemoine & Sons, of France.
Another thing, they were sent out under color; 100 each
of every color offered were tested where I saw them
growing, and there was hardly 25 per cent. in each lot
that would come under the color according to the label.

While writing in this connection I would like to say
that there was another variety tested under the name of
Harvard and it was recognized at once as George Paul,
which was put out by Victor Lemoine some years ago.

It seems disastrous to us that so many old varieties
are re-named and put on the market as something new,
and it seems to me that the Society of American Flo-
rists might take up this matter in connection with its
work on nomenclature. I. S. H.

Uniform Names of Plants.

Editor Florists' Exchange:

I gladly accept James MacPherson's challenge to
"state a better plan" than "following Kew" as to
plant names.

It is clearly impossible for any seedsman, nursery-
man or florist to follow Kew because he can't afford
to buy *Iudex Kewensis*; because it is all in Latin,
describes nothing and even with its appendices is too
far behind the times for trade interests.

As to following Bentham and Hooker's "Genera
Plantarum" (which Mr. MacPherson "begged" Pro-
fessor Bailey to do), that is preposterous, for it does
not describe species! The very name of the book in-
dicates that. I am sorry that is why Mr. MacPherson
stopped writing for Bailey's cyclopedia because he is
apparently a good cultivator and I know he is a strong
and honest writer.

The inconsistencies in Bailey's work are of no prac-
tical importance, because his cyclopedia gives more of
the names in which American horticulturists are vitally
interested than Kew does, since the cyclopedia treats of
varieties and *Index Kewensis* does not.

These inconsistencies could not have been avoided.
The gist of Mr. MacPherson's complaint in citing the
cases *Maclura* and *Benzoin* is this: Bailey used the
name preferred by Professor Gray's system for the
former and by Professor Britton's system for the lat-
ter. In general, the Gray system was used in the cyclo-
pedia because it was the only one practical at that
particular time. It might have cost \$100,000 more to
publish the cyclopedia if the Britton system had been
used, and it might have delayed the publication of the
work ten years.

The attitude of the cyclopedia is most sympathetic
to the "vested rights" of the trade. Kew is not. The
Kew botanists are "lumpers," i. e.: they often con-
sider as one species anywhere from two to ten species
that you gentlemen have a bread-and-butter interest in
considering distinct species. If the cyclopedia had
adopted the Britton system the result would have been
absolutely revolutionary and the whole work would have
fallen flat.

Professor Bailey did not believe in upsetting names
that have stood a century or more without good reason.
He had a good one in the case cited by Mr. Mac-
Pherson. He restored Rafinesque's name *Toxylon* for
the osage orange instead of *Maclura*, because it was
older and because it was as an act of simple justice
to Rafinesque, whom Gray always ignored. True,
Rafinesque had a disordered mind and might even be
called a "nature faker," but it was wrong not to ac-
cept his names when there could not possibly be any
question that they were the first. The cyclopedia al-
ways followed the latest monographer and often gave
the preference to the universal monograph over the
merely national one.

The way to solve this whole question is this:

First, let the Society of American Florists adopt
Bailey's Cyclopedia of American Horticulture as its
standard.

Second, let the society urge him to revive his original
plan of publishing annual supplements to his cyclo-
pedia, giving the correct names and synonyms of all
plants introduced to cultivation since the original edi-
tion.

Third, let the society's committee on nomenclature co-
operate with Professor Bailey, by helping him to gather

the names of all plants introduced during the year; and give every member of the society a chance to protest at the annual meeting or at any time against any name which hurts his interest.

This sort of thing has been done in Germany, where the nurserymen have agreed upon all the names of conifers. It is done by the American Ornithological Union, which not only has one scientific name for every American bird, but also a popular one which is absolutely designative.

In the same way you gentlemen can make it possible for "waahoo" to mean one particular thing instead of five, and you can help to provide names that will sell plants instead of jaw-breakers that kill sales.

Moreover, you can't say that such a system would prevent progress, for you could have any cyclopedia names that you wanted changed if you could show a strong case in committee, just as the ornithologists change the standing of a bird from a mere variety to a separate species by calling together all those interested, hearing the arguments and voting.

The ideal, of course, is to get a system that will be universally recognized, but that may take centuries. I believe Professor Britton's system is the best, but even if the next International Congress of Botanists accepts it, I wouldn't want the job of persuading Kew to do so. Kew is the greatest institution of the kind in the world, and I wouldn't belittle it, but English scientists are extremely slow in joining world movements. Patriotism blinds them to the fact that Wellingtonia is not so old a name as Sequoia.

WILHELM MILLER.

The Private Gardener and Other Topics.

Editor Florists' Exchange.

The case of the poor private gardeners these days is being aired pretty well, and all because the S. A. F. won't do something for them. Some want the tail of the society cut; others want the "O" taken out and the "H" grafted on again. Last year the Boston Gardeners and Florists' Club sent a commercial man to the convention to tell about the private gardener. He did his work well, flung all the bouquets that was possible at the private man, and to use a commercial gentleman's phrase, "it was the best and prettiest speech ever made at a convention." I expected that this year a private gardener would embrace the opportunity of telling us at the convention in an essay just what was expected from the commercial brethren, how they ought to act, etc., but the expected did not happen.

Your August 3 issue contains an article on the subject of the private gardener. I wonder if the inference meant that all delegates from the various clubs were to pay expenses and the poor commercial man was either to stay at home or pay his own. I have many staunch friends among my acquaintances who are private gardeners, who pay their way, and would brook it as an insult to go the way mentioned; and I also have learned by experience that some private gardeners are very loth to part with anything that will help or better their commercial brother, even should the latter be placed in dire straits. Would the private gardener be able to take hold of the reins of the S. A. F. and out-vote the florist? Would he be willing to help the latter in case anything came up that was for his benefit solely?

Mr. Powell in The Florists' Exchange of September 28 says: "I do not consider either of those occupations more elevated or dignified than the other." Wouldn't that give one a jolt? Sounds like getting up two factions and setting them to fight. Then again, he classes those who have held office in the S. A. F. with some cheap politicians. Here, to my mind, is one of the worst things that could have been said about the society. There have been honorable men at the head of it since its inception—men who have given their time freely, without money or asking favors, and to whom graft is unknown. Classing the officers of the S. A. F. with some of the politicians whose dark ways are being brought to light by investigating commissions, brings a slur on the honorable name of the society, its officers past and present, and also its members.

The down-trodden private gardener issue has been something like a belated Summer thunder shower, a Russian retreat, or fighting for something and didn't know what the fight was about. I hope we will get an idea just what the trouble is, and probably some one may diagnose the case and prescribe a remedy.

Some of us florists here are up against a hard proposition. Some time ago the express companies put a charge on all empties; more expense saddled on us. Now one company has given up business on a certain railroad, another has taken over the business, armed its messengers with revolvers and raised the express charges. Got us by the throat as it were, and is squeezing some extra juice out of our already squeezed poor carcasses. Everything that enters into a florist's business has advanced; but flowers, being a luxury, cannot be raised in price, so it is said. If the down-trodden private gardener had to run up against this proposition, the wail would certainly be stronger.

I wonder if the Canadian Florist had anything to do with the appearance of the policeman whose picture shows in the group of delegates of the Canadian Horticultural Association in your September 14 issue. Was he sent there to look over the members and see that the ever pleasant smile was obliterated? By whom sent, I suppose many would like to know.

Natick, Mass.

R. T. MCGORUM.

CLUB AND SOCIETY DOINGS.

NEW YORK FLORISTS' CLUB.—The meeting on Monday evening, October 14, 1907, in the Murray Hill Lyceum, East Thirty-fourth street, was well attended. President Totty occupied the chair. Mr. O'Mara for the committee on closer relations with the Horticultural Society of New York reported progress. Amendments to the by-laws, providing for life membership in the club, were adopted. The life membership fee is \$75, forever exempt from the payment of dues. Messrs. I. S. Hendrickson, Frank Duggan and Leonard Barron were elected members and C. Shaeffer proposed.

George V. Nash, of the New York Botanical Garden, delivered a most interesting lecture on "Water Lilies and Other Aquatics, their Relation to Horticulture." Mr. Nash threw on the screen beautifully colored representations of plants and flowers suitable for the fringe of the water garden, also many individual blooms of water lilies, giving descriptions of each, and furnished a graphic account of the discovery of Victoria regia and its introduction into commerce. Views of the water garden of the lecturer's father, S. C. Nash, Clifton, N. J., which had been evolved from an unsightly swamp into a perfect beauty spot, were also presented. The lecture was listened to with rapt attention, and at its close Mr. Nash was heartily applauded and tendered a rising vote of thanks. A summary of Mr. Nash's remarks appears elsewhere in this issue.

The essay committee announced that at the November meeting a paper on "School Gardens," would be submitted by Henry Saxton Adams, Wellesley, Mass., a gentleman who has given much attention to this subject. This will also be Ladies' Night, and Chairman Nugent promises his usual entertaining and enticing bill of fare in its varied features.

On motion of Secretary Young the club voted to send its condolences and wishes for a speedy recovery to Treasurer Walter F. Sheridan, who is now in the hospital, where he recently underwent an operation for appendicitis.

Robert Scott & Son, of Sharon, Pa., exhibited the new rose Mrs. Jardine. This is an Irish production and comes from the well-known firm of Dickson & Sons, Newtownards, Belfast. Mr. Scott has been growing this rose for two years, and it has proved so good as a Winter blooming variety that he will introduce it to the trade next Spring. The flower is very full, of a pleasing rose-pink shade, tinged with salmon; the petals are very heavy in substance, which would seem to guarantee that it will be a good variety for shipping purposes; the foliage is of a dark green color and would indicate that the plant is robust in character. Considering that this is only the month of October, the stems are long, and, lastly, the rose has a most delicious fragrance, much stronger than that of any other hybrid tea rose that is being forced to-day. This one quality alone will, no doubt, make it a favorite. The award committee granted a preliminary certificate.

Wm. Duckham of Madison, N. J., showed the new orchid-flowered cosmos, Lady Lenox. This variety is of a beautiful pink color, and the flowers as shown measured from four to four and one-half inches in diameter—certainly an extraordinary size for cosmos. A certificate of merit was awarded.

Dailledouze Brothers staged a vase of the new carnation, Afterglow, a beautiful rose-pink variety, shading to silvery pink when full matured. This variety was certificated by the American Carnation Society at Toronto last January. The award committee refrained from judging by points, as the variety is again to come before the club at a future meeting, though honorable mention was awarded.

Henri Beaulieu, Woodhaven, N. Y., showed nasturtium foliage, highly variegated, for which he received the thanks of the club.

F. Hollander of Ozone Park, L. I., N. Y., received honorable mention for a nice exhibit of dahlias. The varieties were all well grown, and included in reds, Jupiter and William Scott; Miss Ruth, a fine, large yellow flower; Grand Duke Alexis, the well-known white; Gloire de Lyons, white, and Empress of Austria, bronze yellow.

President Charles H. Totty exhibited chrysanthemum seedling No. 20, which, under the electric light, seemed like a pleasing red color with gold reverse, and which the award committee scored eighty-seven points, entitling the variety to a certificate of merit, which was awarded.

Mr. Totty also exhibited a vase of new varieties, for which he was awarded honorable mention. Included among them were E. Newman, yellow; Beatrice May, white; Louisa Rousseau, pink; Rider Haggard, white, and O. H. Broomhead, rose-pink.

Another exhibit which attracted much attention at the meeting was a fine roast ham which commissariat Nugent carved during the recess. This ham was of such a superior brand of excellence that on the morning following the meeting Mr. Nugent was kept busy for some time explaining what brand it was and what particular methods were employed in its preparation for the table.

Immediately after the adoption of the rules governing the making of life membership in the Florists' Club, A. J. Guttman, who was the original mover of the motion that a life membership be provided in the club, placed his name with the secretary as a candidate for life membership, accompanying the same with a check for the amount of the fee, \$75.

BOSTON GARDENERS AND FLORISTS' CLUB.—The regular monthly meeting of this club, on Tuesday evening at Horticultural Hall, was one of the best attended of the season, about 150 members being present. A noticeable improvement in the lecture hall is, that with the arrangement of draperies on the ceilings the acoustic properties are much better than they ever have been. Wilfred Wheeler of Concord was the speaker of the evening and he gave a very instructive talk on "The Home Fruit Garden." His paper called out quite a discussion on fruit matters during which Mr. Wheeler recommended the following as the best six hardy grapes for home use: Moore's Early, Worden, Niagara, Delaware, Salem or Agawam, Brighton, McPike or Campbell's Early. He recommended strongly the Worden Seckel pear as of fine flavor. Strawberries for three varieties he preferred Marshall, Brandywine and Cardinal or Abington. He thought that such fruits as the wineberry, dewberry and several others ought to be more largely grown, as they were fine for home use. In reply to a question he said he considered the Kieffer pear the best for canning and that the October Purple was the best plum of its season.

John K. M. L. Farquhar, as chairman of the committee on landscape classes, reported that if enough members would enroll the classes would start about the first of November.

Next meeting being the annual one, the president appointed the following nominating committee to bring in a list of names for officers for next year, Wilfred Wheeler, Charles Holbrow, and William C. Rust.

On the exhibition tables there was quite an extensive display of fruits which Mr. Wheeler brought to illustrate his lecture. The flower exhibits comprised the following: Vase of Nerine Fothergilla major, 16 spikes grown on one plant in an 8-inch pot, by W. N. Craig, for the cultivation of which he was awarded a report of superior merit; a plant of Celosia plumosa pyramidalis from W. V. Downs, for the superior cultivation of which he was awarded a report of merit. Collections of anemones, colchicums and crocuses from W. W. Rawson & Company, each received honorable mention and a vase of climbing Kaiserin Augusta Victoria roses from George Page also received honorable mention. There was also a fine display of dahlias from W. W. Rawson & Company.

The membership of the club continues to gain in number, eight members having been elected at this meeting.

J. W. DUNCAN.

The Limerick in Horticulture.

This latest form of advertising has been adopted by a Horticultural Agency in Holland. The prizes offered are boxes of cigars; and the conditions necessary to enter the contest are to send with the Limerick printed below, with the missing line supplied, "Your order value £5 for seedlings or transplanted forest trees, American plants, plants grown in pots, Ghent plants, etc., just as you like best." It is recommended that every man who smokes should try for a prize as a matter of course. "It costs him nothing." The Limerick follows:

"A Grower from the British shore,
Said: 'Foreign grown trees I abhor,'
But to Holland he came,
Where Van der Bom has fame,
....."

Chrysanthemum Society of America.

Work of Committees.

NEW YORK, October 12.—No. 20, dark old rose (Japanese), exhibited by C. H. Totty, Madison, N. J. Scored 85 points, exhibition scale.

The Lord & Burnham Company, New York, offers a gold medal for the best new chrysanthemum, which has never been exhibited in this country before.

DAVID FRASER, Secretary.

The Etherization of Lilacs.

M. Ledein, chief gardener in the botanical garden at Dresden, Germany, has been experimenting with the etherization and chloroforming of plants, particularly lilacs, and publishes in Möller's Deutsche Gärtner-Zeitung, his new observations relative to that procedure. He has, notably, attempted to apply simultaneously stripping the leaves, to which practitioners often have recourse to obtain autumnal flowering, and etherization.

The results obtained are very interesting; they show, notably, the great differences between the various varieties of lilacs, when so treated. M. Ledein submitted to etherization two series of lilac Marie Legraye—one stripped of the foliage, the other left to themselves during the Summer. The dose in each case was 40 grams of ether per hectolitre of volume of air. In the first case, the plants produced new leaves, while in the second case, they retained their old foliage more or less faded; but in both cases the inflorescence was very mediocre, almost abortive.

On the other hand, the lilac Charles X., treated similarly, gave very different results. The plants submitted to the stripping process developed vigorously the upper buds of their branches, while in the case of those submitted to etherization, the buds were very much damaged, either dead, or were very imperfectly developed; but with the latter the lower eyes became active, and after a short lapse of time produced abundant new foliage, the terminal buds having died. The plants not defoliated preserved their old leaves, and developed a fine inflorescence.—Revue de l'Horticulture Belge.

Seasonal Influence in Carnation Crossing Relative to Seed Production.

Read by William Stuart, of Vermont Agricultural Experiment Station, before Society for Horticultural Science at Jamestown Exposition, September 23-27, 1907.

My object in presenting to you, at this meeting, some data on the above topic is for the purpose of corroborating similar results obtained by W. N. Rudd, which were published in the American Florist, January 21, 1905. In this article Mr. Rudd claimed that crosses made early in the season, say November and December, would give a greater percentage of successes, as well as a larger number of seedlings per capsule than would those made in January or February. No suggestions, however, were offered as to the probable causes of success or failure in early and late crossings of carnations, the inference being that the season of performing the cross was the sole determining factor.

More recently at the fifteenth annual meeting of the American Carnation Society, January 24-5, 1906, Prof. H. E. Hall of the New Hampshire Experiment Station, in advocating carnation crossing early in the season, gives the following reasons for so doing:—"More favorable weather; greater freedom in the production of pollen; plants are then strong, while later they are weakened through production and attacks of insects and diseases." This the writer believes is largely, though probably not entirely, responsible for the differences obtained between early and late crossing. A personal study of carnation crossing for the past four seasons (1903-4—1906-7), coupled with corroborative results obtained by a student in the performance of investigation work under the writer's direction for a graduate thesis, have served to convince us that in the main we may look for maximum success from the early crosses. This does not, however, imply that every similar cross will show a uniform decrease in seed production as the season advances, but merely that the average of a number of crosses will gradually diminish in percentage of successes and in the production of seed.

Owing to the fact that but a limited portion of the station greenhouse could be devoted to carnations, the number of plants upon which crosses could be made was relatively small.

With few exceptions all data show a fairly uniform decrease in seed production and viability of seeds as the season advances. For the purpose of comparison the four seasons' data are presented separately in Table I. In Table II all crosses of like months are combined, thus eliminating practically all minor variations noted in Table I with the exception of the percentage of successes in February which, it will be noted, includes but one season's crosses.

TABLE I.
SEASONAL EFFECT OF CROSSES ON SEED PRODUCTION.

	1903-4		1904-5		1905-6		1906-7

Percentage of successes.....		83.3 ¹	68.1 ¹	60.8 ¹	73.7 ²
Av. no. seeds per capsule.....	40.3	34.1	25.	22.5	18.8
Av. wt. seeds per capsule in grams.....		.072 ²	.055 ²	.03 ²	
Av. no. seedlings per capsule.....	34.1	24.3	19.	13.7	10.9
Percentage of seeds germinated.....	84.6	71.3	76.	60.9	58.

¹Does not include 1905-6 crosses.

²Data for 1906-7.

The October crosses averaged 40.3 seeds per capsule
The November crosses averaged 34.1 seeds per capsule
The December crosses averaged 25. seeds per capsule
The January crosses averaged 22.5 seeds per capsule
The February crosses averaged 18.8 seeds per capsule

The percentage of germination from these crosses was as follows:

October crosses averaged 84.6 per cent.
November crosses averaged 71.3 per cent.
December crosses averaged 76. per cent.
January crosses averaged 60.9 per cent.
February crosses averaged 58. per cent.

Assuming February crosses as the lower limit, the gain per month in number of seeds per capsule is as follows:

February crosses 0 per cent. gain
January crosses 19.7 per cent. gain
December crosses 32.9 per cent. gain
November crosses 81.4 per cent. gain
October crosses 114.3 per cent. gain

In percentage of seeds germinated the following gains were obtained over February.

January crosses 25.7 per cent. gain
December crosses 74.3 per cent. gain
November crosses 122.9 per cent. gain
October crosses 212.8 per cent. gain

A brief comparison of the data obtained by Rudd, on the average number of seedlings per capsule, with that of our own for the corresponding months shows a considerable increase in favor of Vermont crosses, but both show a gradual decrease as the season advances.

Average number of seedlings per capsule.

	November	December	January	February
Rudd.....	15.5	7.8	6.4	4.6
Stuart.....	24.3	19.	13.7	10.9

The percentage of increase in early crosses of seedlings per capsule corresponds more or less closely with that of increase in seeds per capsule. For convenience of comparison the two sets of data are presented in tabular form. Owing to the low average of seedlings from Rudd's February crosses his percentage for November is relatively much higher than that from our own crosses, February results being taken as the factor from which the other percentages were computed.

Percentage increase over February in seedlings per capsule.	January Rudd Stuart	December Rudd Stuart	November Rudd Stuart
	39.1 25.7	69.6 74.3	237. 122.9
Percentage increase in seeds per capsule*.	19.7	32.9	81.4

*Rudd gives no data on this point.

A comparison of the percentage of successful crosses made by Rudd and the writer for November, December and January shows a rather decided increase in favor of the latter; the average increase being approximately 17. 14 and 16 for the respective months mentioned.

	November	December	January
Rudd.....	66.7 per cent.	53.7 per cent.	41.7 per cent.
Stuart.....	83.3 per cent.	68.1 per cent.	60.8 per cent.

A feature of last season's work not included in preceding observations was that of recording the weight of seeds per capsule, see Table I. This data was found to correspond fairly well with that of number of seeds per capsule. The relative weight of individual seeds is, however, greatest in December crosses. With this exception, all the data show the same gradual decrease as the season advances.

Novel Advertising Method of a Seed Firm.

In these days of keen competition the greatest factor tending to the building up of any business is advertising in its many and varied forms. This fact has always been patent to the energetic firm of Stumpp &

Walter Company, seedsmen, 50 Barclay street, New York, and to their belief in a liberal use of printers' ink, billboard and other publicity methods, may, in no small measure, be attributed the great success which has been theirs during the decade they have been in business. It goes without saying, of course, that the firm has always backed up its advertisement assertions by the best business methods, such as furnishing prime quality stock, prompt service, etc.

At the largest fairs held in the vicinity of New York Stumpp & Walter Company make a display of their goods, having a tent on the grounds in which bulbs, plants, etc., are tastefully arranged. During the recent Mincola (N. Y.) fair, in addition to the usual exhibit, the firm adopted the novel method of calling attention to the same, shown in our illustration.

The gentleman (L. E. H. Norris, 73 Tuers avenue, Jersey City, N. J.), seen in the picture, is no ordinary "sandwich" man, but he has a plan of attracting the attention of the public all his own. He is a *poscur*. Assuming the appearance of a wax figure, he in one spot remains motionless for long stretches. On one hand he wears a black mitten, on the other a white one and his waxed mustache rivals that of the German Emperor. With the advertisement of the firm by whom he is employed painted on white oil cloth and attached to a frame, 50x28 inches, point-

Norris's Advertising Method

ing with the index finger of his right hand, he directs the attention of the passer-by to the advertisement. His attitude and make-up never fail of their purpose, and in this way thousands of people read the firm's sign. He directs all inquirers for information concerning the goods offered to the party in charge of the concern's exhibit in the nearby tent or store.

Norris is a familiar figure in the streets of New York, and seems to be a favorite "advertising man." He has been in the publicity business for many years, in various capacities, and holds testimonials as to the effectiveness of the service he renders from mayors of different cities and many business houses, including Stumpp & Walter Company, by whom he was, as said, recently employed. He is a native of Massachusetts, and the son of a soldier, who was taken prisoner during the Civil War, and who died in Libby Prison, leaving the boy to provide for his widowed mother. Norris turned his hand to all sorts of odd jobs—newsboy, boothlack, hotel runner, etc.—finally drifting into the advertising business; and the plan shown in the picture and herein described, is how, at the age of 60 years, he now earns his livelihood. He considers six hours' posing a good day's work, and for this service he asks \$10 a day, or \$50 a week, so that it will be easily understood he is not, as we have said, an ordinary billboard business booster.

Water Lilies and Other Aquatics; Their Relation to Horticulture.

A lecture delivered before the New York Florists' Club, Monday evening, October 14, 1907, by G. V. Nash of the New York Botanical Garden.

Why is it that aquatic gardening is not more frequently resorted to in landscape effects? Is it the fear that it may involve too great an expense, or that it may be difficult to secure plants for the purpose? In this as in many other things you can spend money, and plenty of it too, in developing a water garden, but beautiful results may be obtained with a comparatively small outlay of money, for many of the plants may be secured in the immediate neighborhood, the only expenditure necessary being one of time and patience. There are so many spots, now unsightly or adding but little to the beauty of the surroundings, that could be so vastly improved by even a little care in planting, that it seems incredible that they should be allowed to remain as they are. Many an old swamp or bog, or a pond or lake with unsightly shores, may be turned from a dreary waste of weeds and tangle into a thing of beauty, awaiting but the touch of the artistic hand to effect this transformation. Here may be found many plants, called weeds in their uncultivated condition, which, if but transplanted and given a chance, will respond quickly and well repay the care and attention bestowed upon them. This is the height of the horticulturist's art—to remove the enemies and unfavorable conditions, thus allowing each plant to tell its own story in its own way and bring its message to mankind.

With the site in view, the question arises, how shall we develop it into a water garden? If the old swamp be near a wood, as many of these old swamps are, the work is partly done for us, for this wood will make a delightful background, giving dainty modulations in green during the Summer, and in the Fall an ever-changing scheme of Autumn tints. The absence of a wood need not deter one, however, for much may be done in the planting of the margin of the water garden to supply this want. The question now arises, how shall we do this planting?

The Character of the Water Garden.

In the first place, what kind of water garden do we want—what kind of a water garden will lend itself to our surroundings? An old swamp or bog cannot be so developed without the expenditure of a considerable sum, for it may be necessary to build a dam to retain the waters of our spring-fed or brook-fed site, or it may require considerable digging and dredging, so the financial element must obtrude at times, and cause us to pause in our artistic impulses. If means are at hand, it is hard to imagine a more delightful occupation than turning one of these old neglected spots into a thing of beauty, and watching it develop day by day, as it more nearly approaches the ideal. Perhaps a pond is already at hand, and needs but a touch here and there to transform it. In such a case the task is much easier, and the expense involved comparatively light, for the purchase or transplanting of plants is the main item. Where an old swamp or pond is not

available, an artificial pond may be made, and by properly locating this and exercising care in its planting, beautiful and natural effects may be secured. Or if only a small yard or lot is at one's disposal, let him not despair, for his love for aquatics may be indulged, to a limited extent of course, by building an aquatic tank of cement and brick; but let it appear as such, for frank artificiality is much to be preferred to poorly imitated naturalness, and in narrow quarters landscape effects are not natural. Even half barrels may be used as receptacles for aquatic plants, if these are sunk in the ground, and kept supplied with water.

Development of a Well Arranged Water Garden.

Disregarding the small attempts at water gardening referred to above, let us consider the development of the larger efforts. In a well-arranged water garden there are two features which must be borne in mind, the fringe or margin, or what we should use as a frame for our completed picture, and the picture itself, or water garden proper. The first of these is by no means an unimportant factor, for upon the proper selection of plants to compose this frame much of the beauty of vista and harmony depends. Here we may fail at the start, especially if the site selected requires the use of cement in forming the margins of our pond, for this well-defined artificial rim must be obliterated by the planting, if we hope for any but stiff and unnatural effects. We will assume that the drudgery of forming our pond is over, and that all is ready for the planting. Perhaps, if care has been exercised in the preliminary operations, we already have a number of shrubs on the edge of our pond; at all events, this must be our first consideration, for they are essential features in the scheme. It will not be possible here to enumerate all the plants which may be used in the making of a water garden, but some will be mentioned as suggestions for others. It is always well to bear in mind that many of the plants of the immediate neighborhood may be used to advantage for this purpose.

Planting the Frame.

In the planting of the frame referred to above there is quite an array of shrubs from which to select. The smooth alder (*Alnus rugosa*) is one of these, with its mass of staminate aments borne in tassel-like profusion in March or early April, more attractive at that time from the lack of other signs of approaching Summer. The American elder (*Sambucus canadensis*), more commonly known as the elderberry, deserves a place here for its profusion of flowers in early Summer, followed by the large masses of purple-black fruit. Then the arrow-wood (*Viburnum dentatum*) may be used for its showy flowers; and the sweet pepper-bush (*Clethra alnifolia*) for the same reason and for the added charm of a delicious perfume. The swamp honeysuckle (*Azalea viscosa*) and the Carolina rose (*Rosa carolina*) may both be added to our list of desirable plants, both old-time favorites of our swamps and lowlands. The Virginia winterberry or black alder (*Ilex verticillata*) should not be forgotten, its bright-red fruit being very attractive. The calico bush or mountain laurel (*Kalmia latifolia*) is too popular a favorite to need an introduction here, and its usefulness for this purpose is quite

Nymphaea Martilacea Aibida

From Bisset's "Book of Water Gardening."

evident. The sheep laurel (*Kalmia angustifolia*), a small shrub of our swamps and low grounds, may be used where rose-colored flowers are wanted. The leather-leaf (*Chamaedaphne calyculata*), the privet andromeda (*Nolisma ligustrina*), and the stagger-bush (*Pieris Mariana*), all members of the heath family, are valuable for this purpose. The sweet bay (*Magnolia virginiana*, or *M. glauca* as it is sometimes called), itself an inhabitant of swamps, should not be forgotten in making our selection. Its flowers are of waxy whiteness and sweet-scented. The button-bush (*Cephalanthus occidentalis*), bearing its white flowers in ball-like masses, may be desired by some. The American holly (*Ilex opaca*), with its dark evergreen foliage and bright-red berries, will add much to the effect. There are, of course, many other shrubs which may be used, but from these a good selection may be made, or they may serve to suggest others.

Trees.

It may be desirable to use a few trees, if the effect seems to require them. The sweet gum (*Liquidambar styraciflua*), the leaves of which are 5-7-pointed and turn a deep crimson in Autumn, is a favorite. The pepperidge or sour gum (*Nyssa sylvatica*), the swamp oak (*Quercus palustris*), and the red maple (*Acer rubrum*) suggest themselves here. The weeping willow (*Salix babylonica*) is effective where a tree with pendant branches is desirable.

Herbaceous Plants.

Of herbaceous plants there are many which may be used in the composition of this frame. Any swamp or lowland will furnish a host of native species which will lend themselves admirably to the purpose. With our wealth of wild asters and goldenrods, sunflower and daisies, tickseeds and coreopsis, an abundance of material is at our hand for the mere transplanting. Among others of our native plants may be mentioned our two common blue flag (*Iris versicolor* and *I. prismatica*); the pickerel weed (*Pontederia cordata*), that picturesque inhabitant of the swamps and river margins, often giving a blue tinge to the shore vegetation with its spikes of flowers; the lizard's-tail (*Saururus cernuus*), in contrast with the last with nodding spikes of white flowers; the marsh mallow (*Caltha palustris*) with its bright yellow starry flowers; the American white hellebore (*Veratrum viride*) with its stately stalks of green, adding a touch of variety; the swamp loosestrife or willow herb (*Decodon verticillatus* or *Nesaea verticillata*), a rampant grower, and especially well adapted to conceal an artificial margin; and last, but not least, the swamp rose mallow (*Hibiscus Moscheutos*), sending forth its bright pink blossoms in August, when it is exceedingly attractive.

(To be continued.)

Types of Hardy Water Lilies

From Bisset's "Book of Water Gardening."

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail florist firms advertising under this heading will accept and fill orders for flowers and floral designs forwarded them by mail, telegraph or telephone, the usual commission of 25 per cent. being allowed.

\$25.00, payable quarterly in advance, will entitle the advertiser to a four-line card, under this heading, for one year, 52 insertions. For every line additional to four, \$5.00 will be charged. Four lines will average 32 words: each additional line, 9 words. Each advertiser receives one copy, free, of our Florists' Telegraph Code.

New York.

YOUNG & NUGENT, 42 West 23th St. We are in the theatre district and also have exceptional facilities for delivering flowers on outgoing steamers. Wire us your orders; they will receive prompt and careful attention.

MYER, 611 Madison Ave. My facilities for delivering flowers for any and all occasions are unexcelled. Can give prompt service to steamer and theatre trade. Telegraphic orders solicited. Telephone, 6297 Plaza.

Kansas City, Mo.

SAMUEL MURRAY, 1017 Broadway. I will deliver orders for flowers in Kansas City and vicinity promptly. A first-class stock of seasonable varieties of flowers always on hand. Wire me your orders.

Detroit, Mich.

JOHN BREITMEYER'S SONS, Broadway and Gratiot Avenue. We cover all Michigan points and large sections of Ohio, Indiana and Canada. Retail orders placed with us will receive careful attention.

Denver, Colo.

THE PARK FLORAL CO., 1706 Broadway, J. A. Valentine, Pres. Orders by wire or mail carefully filled; usual discounts allowed. Colorado, Utah, Western Nebraska and Wyoming points reached by express.

Cincinnati, O.

HARDESTY & CO., 150 East Fourth, sell the best grade of flowers grown. Retail orders from distant points for delivery in Cincinnati or surrounding territory will receive prompt attention. Telegraph us.

Dayton, O.

W. G. MATTHEWS, FLORIST, 16 West Third Street. Flowers in any arrangement for all occasions for Dayton and vicinity. Personal attention given to all orders. Long distance telephones.

Dallas, Texas.

LANG, THE FLOEIST, the largest flower store in the South. Floral designs and all flowers in season; personal supervision and prompt service in Oklahoma, Texas, Louisiana. Mail and telegraphic orders solicited.

Louisville, Ky.

JACOB SCHULZ, 644 4th Avenue. Personal attention given to out-of-town orders for Louisville and surrounding territory. Have a choice line of seasonable flowers always in stock; delivery facilities perfect.

Indianapolis, Ind.

BERTERMANN BROS. CO. Our facilities for executing orders in an efficient manner are unexcelled. Our shipping territory includes the surrounding states. High grade flowers; expert workmanship.

Albany, N. Y.

EYES, 11 North Pearl Street, cut flowers or floral designs delivered to any part of Albany and vicinity on telegraphic order. Personal attention given and satisfaction guaranteed.

Chicago, Ill.

HAUSWIRTH, The Auditorium Florist, 232 Michigan Avenue. The quality of our work is of National repute, and we are prepared to execute commissions in first-class style in Chicago and its environs.

Retailers desiring a share of out of town trade should be represented by a card in this column.

New Officers of the Philadelphia Florists' Club.

FREDERICK HAHMAN, president, is a grower. His establishment is on Harrowgate Lane, Frankford, Philadelphia, Pa. The place was built by his father who died about 1896. The establishment consists of about 35,000 feet of glass. Roses and carnations are grown for cut flowers, but for years the place has been noted for Spring plants. Large numbers of roses in pots are grown each year, also all kinds of bedding stock, and of late years large quantities of Easter stock, all of which are disposed of to the up-town trade. The establishment has been entirely remodeled during the past six years, and is now quite up-to-date.

The new president is quiet and unassuming and has not been as well known in our club as he ought to have been. He is a very hard worker, and all details are well thought out before action is taken. He has had considerable experience in other associations, and has been an officer in the Beekeepers' Association for many years. While he has never come to the front in debates in our club he has a good flow of oratory when occasion requires.

WILLIAM GRAHAM vice-president, is now head of the firm of William Graham Company, florists and decorators, with a retail store at 104 South Thirteenth street and greenhouses at Logan and Olney. The business was established by his father, Hugh Graham; during the father's time William took charge of the

Park, Sussex, an all-round place with 40 men in the gardens the year around. Subsequently Mr. Rust was for 18 months in the estate office of the Marquis of Abergavenny, Eridge Castle, Tunbridge Wells. In 1884 he came to this country on a visit, and after making the acquaintance of the late Peter Henderson was induced to remain here. He spent eight months in the Henderson nurseries at Jersey City Heights, and from there was sent to Conshohocken, Pa., to take charge of the private establishment of George Bullock. On the death of his employer he spent three years traveling for the J. E. Lee Company, Conshohocken, Pa., manufacturers of surgical specialties, and later was connected with Henry A. Dreer, Inc., as local traveler around Philadelphia. In 1895 Mr. Rust was elected secretary of the Pennsylvania Horticultural Society, and has served continuously in that capacity since that time. In 1893 he became the Philadelphia representative of The Florists' Exchange, and has attended to the interests of that paper ever since. He has been active in the club for the past 14 years, and for 12 years past has been a member of the club room committee, the past three years being chairman of it.

Lawson on Advertising.

The Sphinx Club, composed of advertising agents, held a banquet at the Waldorf, New York, last week, with Thomas W. Lawson as chief guest. In the course of his remarks Mr. Lawson said:

New Officers of the Philadelphia Florists' Club in Session.

Vice-Pres. Wm. Graham

Pres. F. Hahman

Secy. David Rust

Treas. George Craig

decorating work and for years has done all the big work in this city, not only for large private balls and banquets but also all large public and municipal work. As a decorator and designer it is doubtful if he can be beaten. His work is original and is executed from plans made by himself, as he is very skillful with pencil or brush. He has had considerable experience in club and association work, and has also seen service in our city work, having been a member of Councils.

GEORGE CRAIG, treasurer, is a retail florist with store at 211 South Eleventh street. He is a brother of Robert Craig with whom he was for many years in partnership, Robert operating the greenhouses and George the retail store. George, while of very quiet disposition and having little to say, has been interested in the club since its formation, and has for years acted as secretary of the club room committee. Both in club affairs, and in business he has always been known as solid and reliable. He keeps an up-to-date store, not making any especial effort for fancy display, yet everything is of the best; his substantial business is done in a quiet, unassuming way, and in consequence he has a very steady trade with customers of many years' standing.

DAVID RUST, secretary, was born in 1861 on the estate of Sir George Jenkinson, Eastwood Park, Falfeld, Gloucestershire, England, where his father was for many years estate manager. After a private school education finished by a three-year course at Ardingly College, he spent one year with the estate manager on Sir Curtis Lamson's estate near East Grinstead, Sussex, then 3½ years in the gardens of the Hon. Roger Leigh, Barham Court, near Maidstone, Kent, a place celebrated for its fruit gardens, later being four years in the gardens of Lord Leconfield, Petworth

Park, Sussex, an all-round place with 40 men in the gardens the year around. Subsequently Mr. Rust was for 18 months in the estate office of the Marquis of Abergavenny, Eridge Castle, Tunbridge Wells. In 1884 he came to this country on a visit, and after making the acquaintance of the late Peter Henderson was induced to remain here. He spent eight months in the Henderson nurseries at Jersey City Heights, and from there was sent to Conshohocken, Pa., to take charge of the private establishment of George Bullock. On the death of his employer he spent three years traveling for the J. E. Lee Company, Conshohocken, Pa., manufacturers of surgical specialties, and later was connected with Henry A. Dreer, Inc., as local traveler around Philadelphia. In 1895 Mr. Rust was elected secretary of the Pennsylvania Horticultural Society, and has served continuously in that capacity since that time. In 1893 he became the Philadelphia representative of The Florists' Exchange, and has attended to the interests of that paper ever since. He has been active in the club for the past 14 years, and for 12 years past has been a member of the club room committee, the past three years being chairman of it.

"My life work I follow for bread and butter and a little cake. Advertising I follow for the fun of it, and to get rid of that constantly increasing surplus that comes in from other directions.

"Now, since this won't go any further, I'll open my books to you. I started with an income of \$3 a week and expenses of \$14. In 38 years I have spent from \$6,000,000 to \$8,000,000 advertising. One batch of advertising cost me \$385,000.

"I have spent from \$15,000,000 to \$20,000,000 on the necessities of life and I have lost from \$40,000,000 to \$50,000,000 down there at that Wall Street roulette game. You'll say I must have made it somehow first. Some say I got it at the Wall Street faro bank. But anyway, I lost it at the iniquitous game as it is played to-day.

"Well, I've got to-day a dog, a lame horse or two, a couple of suits of working clothes and one lecture outfit, and I've got the original \$3 a week and a dollar and a quarter in cash over that.

"Let me tell you about the Lawson pink. I went into the florist shop and saw that pink, and said, 'How much?' The man said, '\$30,000,' and I said I'd take it and put it in my buttonhole, and walked out. The next day it withered, like all pinks, but the story of it went around the world. I got at least \$1,000,000 worth of advertising out of that fool transaction of \$30,000. Moreover, I love flowers.

"When I paid \$30,000 for that pink I agreed to spend \$15,000 within the next three weeks advertising the fact that I had paid \$30,000 for it, the florist to have a third of the profits. I got back my original capital and a profit of \$15,000 and I gave the florist back the flower again."

Grant Thorburn.

The portrait of Grant Thorburn, founder of the seed house in New York which bears his name, herewith shown, originally appeared in Fraser's Magazine, Scotland, and so faithful was the depiction of the man that he was, by the picture, identified by George W. Johnson, founder of the Journal of Horticulture, London, England; who thus tells the story:

"It was somewhere about the year 1833 or 1834 that we met in the quadrangle of Edinburgh University a wee wee man, about 4 ft. 10 in. high, clothed in very long garments, the skirts of which reached to his ankles, and with a very low-crowned and very broad-brimmed hat upon his head. His feet, like the brim of his hat, were out of all proportion to his body, for they were very large and very long; but beneath that broad brim there shone a beaming countenance, full of intelligence, benignity, and playful humor. It needed not to have his name announced, for the world had been made familiar with his portrait through 'Fraser's Magazine,' and we had no difficulty in at once recognizing the living image of Grant Thorburn."

Grant Thorburn was a believer in the value of printers' ink, and the following example of his "Advertisement" in the public papers of his day is both characteristic and historic.

"In 1799 the subscriber commenced business with three pots of geraniums, a monthly rose, and fifteen dollars' worth of seed. The seeds grew till they filled the whole continent—the rose blossomed till it spread into a tree, and the little birds formed their nests under its branches. Presently there came forth a host of pretenders, boasting of what they could do; they did nothing. In 1818 appeared William Cobbett. This same Cobbett, in 1793-4-5, published the Porcupine's Gazette in Philadelphia; its object was to prove to a demonstration that all republics were humbugs—that only kings had a divine right to reign—and that the Americans were a set of consummate rebels. The mob tore down his office, made 'pie' of his types, and scattered his porcupine quills in their native air. He fled to England, returned to New York a full-blooded radical Democrat, and opened a seed-shop at 62 Fulton street, where he sold ruta baga at one dollar per pound, and black pigs for ten dollars each. For a long space of time you could hear nothing in Wall or Exchange streets, but Cobbett and his black pigs—Cobbett and his ruta baga. The consternation was similar to that at Frankfort, when the man rode through the streets with the long nose, and still the wonder grew whether the nose was a paper or a timmer (wooden) nose. He vowed he would drive Thorburn from the boards with his black pigs, and ruta baga, in less than six months. Before twelve he closed the concern, and again sailed for England. Naked he came into America and naked he returned from thence; his whole goods and chattels (a few minor articles excepted) consisting only of ruta baga and smoked hams from the hind quarters of his black pigs; he shipped one case, however, which by some estimation was beyond all price—viz., a rough Albany deal board, formed into a square box, and in this box was deposited the profound skull and dry bones of the venerated Thomas Paine, author of 'Common Sense,' etc. Out of these bones Cobbett meant to have made political capital, but they were seized by the custom house at London for duty, and sunk (if report speaks true) in the deep green sea.

"From this subject it may be profitable to observe how similar are the movements of political quacks in all countries and at all periods. It is but a few years since that our political jugglers turned the world upside down about Morgan, his dry bones, and split skull; Louise Philippe, too, and his French radicals, must needs parade the bones of Buonaparte wherein to make a bank political.

"But enough of this long preamble. It is only meant to let his friends know that Grant yet lives—his eye as clear, his head as sound, and his health as good as in 1801—and this being the first day of Spring he is provided with the usual supply of goods (as they say in Pearl street) to accommodate his friends; and his being only a branch from the tree at 15 John street, the seeds, on trial, will prove good. American and European flower seeds just received. Bouquets prepared for the ladies in the neatest order. Catalogues gratis. Gentlemen supplied with gardeners, etc.—GRANT THORBURN."

In 1833, he revisited his native land, and one of the most touching chapters in his journal, entitled "Men and Manners in Britain," is that in which he narrates a gathering at his native town of a select twenty-five, "the majority of them my school-fellows fifty years ago," and from whom he parted to meet no more, with "Auld Lang Syne." That volume was published in 1835, but the year previously had appeared his "Forty Years in America," which met with a very rapid sale, and lured him to repeat himself more than once; for his "Fifty Years' Reminiscences," published in 1845, and his "Life," in 1852, are only versions of his first literary production. This exemplary man died in America in January, 1863, and within a few weeks of completing his ninetieth year.

St. Louis, Mo.

News Notes.

The directors of Shaw's Garden will again hold a fine chrysanthemum show at the garden this Fall. Professor Wm. Trelease and Superintendent Irish say that they have not yet set the date, but it is their belief that the exhibition will open the first week in November and hold over the second week. Should the flowers not be ready the first week, the show will open the second Monday in the month, which would conflict with the Horticultural Society's Fall exhibi-

Grant Thorburn in 1833

tion, but would hardly do it any harm financially. Let us hope that both will be largely attended.

Ostertag Brothers have the contract from Miss Helen Gould of New York to furnish the decorations for the new Railway Y. M. C. A. building just completed, which was a gift from Miss Gould. Several hundred dollars will be spent in decorations for the opening, which will take place this week.

Fred. H. Weber at Maryland and Boyle avenues has his place stocked with fine plants and cut blooms of chrysanthemums. His decorative stock is of the best. Mr. Weber has quite a few orders booked for this month to furnish weddings and receptions.

John Steidle and A. Jablonsky, two of the largest growers at Central St. Louis County, will furnish this market with fine cut stock this season. They grow some of the best carnations and roses in this locality, also California violets. Mr. Steidle's stock is all taken by Fred. C. Weber, and Mr. Jablonsky sends his to the commission houses to be disposed of.

Julius Dillhoff, representing Schloss Brothers ribbon house, New York, was a caller this week. He reports a good trade in ribbons this season.

C. Young & Sons Company are hav-

ing a big business in bulbs this Fall. They do a large shipping trade in this line. Jim Arato, who has charge of the cut flower department, says that they had heavy funeral orders for this month.

Professor H. C. Irish reports that he visited Henry Jenneman's place at Webster Groves, Mo., last week, and he says he never witnessed such a fine lot of dahlias as seen here.

C. De Wever has James Dunford's place in fine condition. His crops of carnations, violets and bulbous stock will be large this season and of the best.

Florists' Club.

At the meeting held Thursday afternoon, October 10, the newly installed officers performed their duties for the first time, and did it well. The attendance was quite large, and much interest was taken in all the proceedings. President William Young occupied the chair, and twenty-one members were present. A nice display of assorted cut dahlias was made by Henry Jenneman, of Webster Groves. Mr. Jenneman made application for membership. Walter Retzer was elected a member by a full vote.

Adolph Brix invited all the members to visit his free flower show on Friday, November 8, which was accepted with thanks.

G. H. Pring, who recently returned from his trip to Europe, was called upon, and stated that he has taken a larger number of views of fine places and offered to give an exhibition at one of the club's afternoon meetings, which was accepted, and the December meeting was selected for the stereopticon display and his lecture, to which all the local trade is invited.

J. F. Ammann, of Edwardsville, Ill., who had charge of the floral department of the Illinois State Fair at Springfield, gave the members an interesting talk on the displays made.

A vote of sympathy was sent to George M. Kellogg, of Pleasant Hill, Mo., in his loss, through the recent boiler explosion. The Chicago Florists' Club also received the sympathy of the members in its loss of a fellow member and officer, Edgar Sanders, who was well known to all of the members.

As the next meeting, on November 14, comes during the week of the flower show given by the Horticultural Society, and a great many trade visitors are expected here, the trustees were instructed to invite them all to attend our meeting and to prepare an entertainment and lunch for this occasion. The president appointed J. J. Beneke and Professor H. C. Irish to act with the trustees to meet a committee of the Horticultural Society regarding plans for the entertainment of all visitors during show week.

After a vote of thanks to Henry Jenneman for his dahlia display, the meeting adjourned. The members were then taken by the officers to a café for lunch at which twenty-one sat down. Short talks were made by President Young, Chairman Schoenle, J. J. Beneke, J. F. Ammann and C. C. Sanders. These little after-meeting lunches will take place during the term of the present officers, and a large attendance is expected at each meeting.

ST. PATRICK.

Washington, D. C.

News Notes.

A terrific wind and rain storm swept over the entire District of Columbia on the morning of October 8, doing considerable damage to property and trees in Washington, and to growing crops in the vicinity. Cosmos and dahlias not well staked or protected were leveled to the ground. The Weather Bureau recorded a wind velocity of 35 miles per hour, and claimed it to be the worst storm of the season. So far as could be learned greenhouses were not damaged to any great extent.

W. R. Smith, superintendent of the United States Botanic Gardens, has a very fine specimen plant of Ampelopsis robusta growing upon a wall in the propagating department which he considers much "brighter and better" than Ampelopsis Veitchii. The two varieties are widely separated to prevent hybridization by bees and thus from the first named seeds are obtained which come true. These are sent to various sections of the country. Many fine tropical plants are still occupying their Summer quarters out of doors where they are retained by Superintendent Smith to

make the gardens more beautiful for the large number of visitors here from Jamestown.

During Thursday, Friday and Saturday, Z. D. Blackstone gave one of the best private exhibitions of dahlias ever afforded the Washington public. The show was in connection with his annual palm sale. There were about 200 of the most choice varieties of dahlias on exhibition, which attracted much attention. Bunches of these flowers were given to visitors and customers who registered. The Normal School, with Miss Sipe, attended in a body.

JAS. L. CARBERRY.

At the instigation of the Washington Post, Conrad H. Syme, of Washington, applied to the Supreme Court of the district for a writ of injunction against Captain John H. Poole, Corps of Engineers, U. S. A., to restrain him from destroying the historic trees in the Botanic Garden. Justice Gould issued a rule directing Captain Poole to show cause on October 18 why he should not be enjoined from cutting down, injuring, or destroying the trees which are standing on the site desired for the Grant monument. Mr. Syme's suit is based on the contention that Congress authorized the Grant Memorial Commission to select a site in the Botanic Garden on unoccupied ground, and that the commission has no right to usurp the ground occupied by trees. If the Botanic Garden has any excuse for existing, it is because it is a protection to the trees and botanical specimens occupying its grounds. The space given to rare and historic trees in the garden is occupied, in the true sense.

"The Post adds: 'It is refreshing to see in the District a private citizen who has the public spirit to step forward and call a halt on the proposed vandalism. Mr. Syme deserves the thanks of the residents of Washington and of all Americans who are desirous of preserving the chief beauty of the Capital. Captain Poole is not personally blamable in the matter, being merely charged with the execution of the contract already awarded. But it is well that the court should scrutinize the legality of the effort being made to fritter away the Botanic Garden and revolutionize the Mall. The matter has been called to the attention of Speaker Cannon by his vigilant secretary, Mr. Busbey, and it is safe to predict that Congress will put a stop to any attempt to commit the government to a vastly expensive scheme of 'improvement' which contemplates the destruction of the trees in the Capitol grounds and the Mall. Neither Congress nor the public will tolerate any such scheme of vandalism, by whomsoever fostered.'

Providence, R. I.

The News.

William Hay, rose grower, is negotiating for a much more extensive place to build on this Spring. It is understood he will acquire a 100-acre farm. Mr. Hay is the most successful rose grower that ever took up this part of the business in this city.

The wedding of Mr. and Mrs. William Appleton's oldest daughter, Mary, to Charles Warburton, took place Thursday, October 10, and was attended by a great many florists and other friends from Boston, Worcester, and other towns. The affair was one of the most brilliant seen about here in a long time, but was brought to a very sudden termination by Edward McCarron of Boston dying very suddenly of heart failure in the midst of the festivities. Mr. McCarron was an uncle of the bride and a brother of Eugene McCarron, a well-known florist of this city.

James B. Canning has returned after a week's trip among the growers in Massachusetts and Connecticut.

J. L. Reynolds is filling his former position at T. J. Johnston's store, after a very long siege of la grippe.

Mrs. Thomas J. Johnston has the deepest sympathy of her many friends in her double bereavement, first in the loss of her husband two months ago, and now in the death of her oldest son, Joseph, a very bright boy of eleven years of age, who was only ill one week with diphtheria, who was buried last Monday.

Lonie Patry has returned to his former employer, John F. Wood, after several months' sojourn in the South. G. A. J.

Commercial Violet Culture \$1.50

The Florists' Exchange, 2 to 8 Duane St., N. Y.

Philadelphia.

Trade Notes.

The social season has practically started up this week with the debutante teas, at which many cut flowers were used. While there is lots of business going on trade cannot be said to have much life in it. Perhaps there is too much stock in cut flowers, as we have not had any killing frost yet, and asters, dahlias, early chrysanthemums and cosmos in quantities are seen side by side at the wholesale houses, but the retail stores are not buying in quantity, and even the firms who do decorating are very quiet.

The street peddlers are temporarily put out of business, by an order from police headquarters, and the commission houses are throwing away much stock that these men usually buy.

There is a perfect glut here of early chrysanthemums; this market never saw so many of these; even good flowers are selling at \$5 per 100.

Society Meeting.

The Pennsylvania Horticultural Society's regular meeting was well attended on Tuesday evening.

In the competition for prizes for early chrysanthemums, Mr. John W. Pepper, (William Robertson, gardener) was first with six grand flowers of Beatrice May; in fact they were the best blooms ever seen at the October meeting, being perfect, very large, and with clean foliage and no sign of any disease which has been prevalent on this variety. Members present who saw this variety at the Madison, N. J., and New York shows last year said the flowers exhibited by Mr. Robertson here far surpass any seen at those shows. In addition to first prize a certificate for culture was awarded. The second prize went to Mrs. R. J. C. Walker (John McLeary, gardener), for six blooms of Mrs. E. T. Miller, a very good white. Prizes for cosmos were awarded to Mr. Walter Lippincott (James Coleman, gardener), Mr. Samuel B. Brown (Joseph Crowthers, gardener), Mr. C. B. Newbold (Samuel Batchelor, gardener). In the exhibit of Mr. Brown were some blooms of a white double cosmos; the flowers were of the form of an anemone chrysanthemum, and if it can be retained it will prove quite an acquisition.

DAVID RUST

Kalamazoo, Mich.

Trade Notes.

Business continues to show slight increases each week and I suppose we are doing about as well as usual for this season of the year. Chrysanthemums and violets are on the market from the local growers and sell fairly well. Roses and carnations are improving in quality. The former fetch 50c. per dozen up; carnations 25c. up. These quotations keep the price of chrysanthemums, etc., from soaring very high.

The business in bulbs is reported as being good. There appears to be a steadily increasing demand each season in this line, many thousands of bulbs being sold now where a few years ago a hundred or two sufficed. I am glad to see the retail florists are giving special attention to this line with satisfactory results.

The nurserymen are busy packing and shipping and all agree as to a most satisfactory season in their line. W. C. Cook, now in charge of the ornamentals for the Central Nursery Company, writes a column each week for the Sunday special of the Gazette which is both interesting and instructive, and should be of especial help to the caterers of outdoor stock.

I understand the transfer of the Central Nursery has been effected and a new organization is now in control.

Mrs. Batson and family have returned safely after spending the Summer in England and Scotland, chiefly at the old homestead in the Highlands.

A. Grovert has built a nice suite of rooms in the vicinity of his greenhouses so as to be handy and close to his business.

The championship series of ball games attracted several enthusiasts to Chicago from this city, who combined business with pleasure.

New York.

News of The Week.

There has been much talk from time to time relative to the New York Florists' Club having a home, and never before probably was the need of such so apparent as at the present time. J. K. Allen, the well-known wholesale florist, recently drew our attention to a scheme whereby the club could become fixed in permanent quarters and without any material outlay or expenditure of the club's funds. The scheme is this: There is a building at 109 West Twenty-eighth street which is at present vacant. The building is a three-story brick and basement, 96 feet deep, and can be obtained at a nominal rent if the whole building be leased for a term of years. Mr. Allen's idea would be to get hold of the building, make some slight alterations in the basement and parlor floor, so that these floors will be adapted for a wholesale flower business, after which there would be no difficulty in renting them for an amount almost equivalent to the rent of the entire building. The two upper floors could be used—one as a club room and the other possibly could be rented out for some other purpose. This scheme seems to us entirely feasible and one that is worthy of investigation by those in authority.

At Seaciff, L. I., the greenhouse belonging to T. Watkins, which was about 125 feet long, was blown over during a very high gale of wind, doing much damage.

The new cosmos, Lady Lenox, is being introduced to the trade by Arthur T. Boddington, seedsman, 342 West Fourteenth street.

Carl Cropp, of Vaughan's Seed Store, arrived in New York on Monday from Europe on the steamer New Amsterdam.

A. M. Rennie of the same firm who underwent an operation two weeks ago at his home in Providence, R. I., is slowly improving.

Robert Berry, who is well known to the trade in this city, has secured a

position in the Park Department in Manhattan.

Nicely flowered chrysanthemum plants were seen in quantity this week at the store of John Young, 51 West Twenty-eighth street, and at James McManus's, 42 West Twenty-eighth street.

The many friends of W. F. Sheridan will be glad to hear that he is progressing favorably toward recovery.

From the present quietness that reigns in the larger retail stores throughout the city, it would seem that the tightness of the money market is being felt to quite an extent.

Dr. N. L. Britton, director-in-chief of the New York Botanical Garden, and Mrs. Britton have returned from a plant collecting trip to Jamaica, W. I., extending from August 24 to September 28, 1907. The Doctor reports having secured some 2000 specimens for the museums, herbariums and greenhouses.

P. R. Quinlan of Syracuse, N. Y., Edward Schwartz of Sharon Hill, Pa., and Eli Cross of Grand Rapids, Mich., were visitors this week. Mr. Cross was here to meet his mother arriving from Europe.

A. J. Fellouris, wholesale dealer in florists' greens, galax, etc., at 52 West 28th street, has filed a petition in bankruptcy with liabilities \$11,892 and nominal assets \$2,218.

HUNTSVILLE, ALA.—John Fraser, nurseryman, recently celebrated his sixty-fifth birthday. He has devoted 32 years to the nursery interests of Huntsville, first as superintendent, later as owner of the successful business conducted under his name. Desiring to be relieved of active responsibilities, a corporation has been formed, with Mr. Fraser as president, James W. Fraser, vice-president and treasurer, and John Fraser, Jr., secretary.

WORCESTER, MASS.—Hugo Book, florist, died in St. Vincent Hospital on October 4, whither he had gone for an operation for appendicitis. He was a native of Germany, and was 50 years of age.

CHICAGO.

GEO. ASMUS, Manager,
Room 1411 First National Bank Bldg.,
Dearborn and Monroe Streets,
CHICAGO.

Notes from Ohio.

Hammerschmidt & Clark, florists in Medina, O., have built a new house, 100x20 feet, a new boiler room and a fine new workshop. They now have a nice range of glass and grow some good stock.

Lamprecht & Rittenhaus, Ashland, O., have just completed four new houses, each 100x14 feet, which, added to the four erected last season, make a very creditable range of houses. Two are devoted to roses, the others to carnations, all the standard varieties. They are looking for a very good marketable white.

Mrs. W. W. Cunningham, of Seville, O., has some very excellent carnations.

Mr. and Mrs. Robert Sandiford, Mansfield, O., spent the Summer in England and are back home. Mr. Sandiford is very busy with pelargonium cuttings, of which he grows many thousands.

Andrew T. Winget, also of Mansfield, has a fine new wagon; he is doing nicely on his place.

The Berno Floral Company of Mansfield was visited, and it was a real pleasure to inspect the four houses devoted to chrysanthemums and about four houses of carnations. The chrysanthemums are really fine—large, with straight stems, and the cleanest I have ever seen. The carnations are also good; the usual commercial kinds are grown. Mr. Berno spent his vacation on a trip up the lakes and had a most enjoyable time.

All these in first-class condition and running order. Address or see I. Suesserman; care M. McMahon, Clinton Avenue, South Nyack, N. Y.

Syracuse, N. Y.

Business Bits.

Trade here is very good indeed, and the florists anticipate a large increase in the Fall business. All the big factories are booming, consequently, plenty of money is being spent. Large funeral orders have kept the stock worked up very close.

Most of the florists have their carnations housed. September was an ideal month for the work, it being very cool, with very few bright days. Plants have made a splendid growth in the field, and are nice and clean. There has been no killing frost so far, although the nights have been very cool.

L. E. Marquisee has nearly completed his repairs and has the larger part of his carnations planted. He is cutting some nice Enchantress. Marchioness looks very much like a winner; certainly it is the freest bloomer I have seen. Lady Countess will not compare with it. I shall watch it very closely, for I think its weak stem last Winter was caused by the long continued dull weather more than by lack of vitality. Experienced florists who have seen Marchioness are much impressed with it and believe it has a great future.

G. Bartholome has his new plant nearly completed; he has been delayed through lack of good help. His plant is compact and thoroughly up-to-date in every particular. The walls are built of hollow concrete blocks and all the walks are of cement. The six houses cover the lot 100x100 feet, and are built on the ridge and furrow plan. Two houses will be planted with carnations, two with roses, one in palms, ferns, and asparagus and one for general stock. Hot water will be used throughout, a large Advance boiler being installed. Over the boiler is the work room and potting shed, which runs the whole length of the houses. The office is in front.

Peter Kay has taken the ground vacated by Bartholome and has erected three houses, each 100x18 feet, to grow a general assortment of plants.

Walter Menelly & Sons' carnations have started to make a nice growth and promise well for a good Winter's crop. They are contemplating putting up a new house, 200 by 20 feet, the glass for which is already purchased. H. Y.

FOR SALE

PIPE Good serviceable second hand. No Junk, with new threads, 1 in. 3¼c.; 1½ in. 4¼c.; 2 in. 6¼c.; 2½ in. 10c.; 3 in. 14c.; 4 in. 19c.; per ft. All kinds of fittings for 4 in. cast iron and all sizes wrought iron.

A Good Christmas Tree Holder.

Every retail florist is always on the lookout for anything new in the way of a plant stand, or a Christmas tree holder. The illustration shown herewith gives a correct idea of the practicality of a device that is being put on the market this season by Hitchcock & Kilian, New Rochelle, N. Y. This stand

Hitchcock & Kilian's Christmas Tree Holder

is of the simplest construction, and as it can be instantly adjusted to any sized tree, its usefulness to retailers during the busy Christmas season should make it a favorite.

Indianapolis.

Current Topics.

The department stores are having fern sales at 5c. to 35c. each; thousands are sold daily and are brought to the florists to be potted, as they are offered as received from the benches.

The Florists' Athletic Association held its monthly meeting at the South Side Turner hall; all kinds of amusements were provided, and the twenty-five attendants spent a most enjoyable evening. Next month's meeting place will be at the "Walshalla" in East Washington street.

Red-berried dogwood sprays are useful in decorating at present.

Bertermann Brothers Company were busy with decorations last week.

George B. Weigand has returned from Chicago.

Harry Jones is attending the funeral of a relative at Milford, Ind.

Mrs. Vesey of Fort Wayne is offering some excellent stock to the Indianapolis trade.

W. A. Manda's representative, Dan MacKortie, succeeded in booking many orders for Italian boxwood and Japanese holly last week.

The City Park Board allowed the public to help themselves to the plants in the various parks; thousands were carried away in an incredibly short time.

I. B.

Cincinnati.

News Notes.

Julius Baer is sporting a fine automobile delivery wagon. These machines are certainly quite the thing when you want to go some place.

D. MacRorie, with W. A. Manda, was a caller and reports sales brisk. E. Fancourt of S. S. Pennock-Meehan Company was also a visitor.

Fred. Gear and C. E. Critchell were in Chicago last week enjoying the world's champion baseball game and other sights.

Park Superintendent Rodgers is having ground broken at the east end of Fountain square for a public laboratory—a much needed institution.

Gus. Adams, formerly with J. R. Goldman, Middletown, O., now with Crabb & Hunter Floral Company, Grand Rapids, Mich., has fallen heir to about four thousand dollars from an estate in Germany. He said the first intimation he had of it was when reading a German

paper one evening in Grand Rapids and his eye fell on his name, age, description and asking for his whereabouts.

Meyer Heller and wife, of New Castle, Ind., were callers Tuesday, having run over in their automobile.

J. T. Congers was judge of the horticultural products at the Hamilton, O. County Fair.

E. G. G.

St. Paul.

Trade and News Notes.

Fall trade has opened up well; killing frosts have cut down all outside flowers in this section. Roses and carnations are fairly plentiful though the best grades are not in over supply. Some single violets of good quality are seen on the market and sell quickly. Chrysanthemums are coming in limited numbers and sell at sight, the demand exceeding the supply all the time.

Millinery and other. Fall openings have created some demand for palms and decorative stock. As plants can now be handled without wrapping there is some profit in this class of business.

October receptions and weddings are creating a good demand for all choice flowers.

The Golden Rule, a large department store, now maintains a regular flower department, presided over by a Greek. A prominent confectionery store has been selling "choice" flowers at "cut prices" for several years. We think these stores have helped the trade in general, for only the poorer people and not regular buyers patronize them.

L. L. May & Company, doing a general nursery, seed and florist business, have incorporated. The capital stock is \$200,000, half preferred and half common. The officers are: L. L. May, president and treasurer; F. W. May, vice-president; E. W. Reid, secretary and W. H. Lovell, assistant treasurer.

L. L. May is building a modern, concrete seed warehouse on Como avenue.

John A. May, identified with the trade for many years, has engaged in the shoe business. His numerous friends wish him success in his new venture.

Recent callers included C. M. Scott, of Vaughan's Seed Store, Chicago; Martin Reukauf, of H. Bayersdorfer & Company, Philadelphia; C. S. Ford, representing A. Hermann, New York; a representative of the A. L. Randall Company, Chicago; Mr. Abrahamson, of E. H. Hunt, Chicago; A. N. Kinsman, Austin; N. Nielson, Mankato.

O. J. Olson returned a few days ago from a successful duck shoot laden with the spoils which he generously distributed among friends.

Holm & Olson are erecting a new propagating house and extending their large palm house.

L. L. May & Company are installing new boilers in their new warehouse for heating their entire plant.

The St. Paul Floral Company has rebuilt one house and made some necessary repairs to others, so that the place is now in most excellent shape for growing good stock.

A. H. Bunde, who recently rented his greenhouses, says he finds it harder work to keep out of the business than it was in it.

VERITAS.

ROCHESTER, N. Y.—Ellwanger & Barry have just received an order for nursery stock from the United States Government to be shipped to the Philippine Islands.

The premiums awarded to this firm at the seventy-sixth fair of the American Institute, New York, September 24, 1907, were two first prizes for pears, two firsts for grapes, one first for plums, one first for quinces and one special for apples.

The American Pomological Society at its thirteenth biennial session held at the Jamestown Exposition, Norfolk, Va., September 24, awarded to Ellwanger & Barry the Wilder medal, for their display of fruit, consisting of 111 varieties of pears, 96 varieties of apples and 40 varieties of grapes.

NEW BEDFORD, MASS.—Fred Covill has left the employ of E. H. Chamberlin and is now with R. E. Nofftz.

The Horticultural Society held its regular meeting on October 14. The discussion was on "The Cultivation of Bulbs, Outdoors and Indoors," led by Mr. Jahn.

ARAUCARIAS OUR SPECIALTY WATCH US GROW

1907 is our 12th anniversary in a successful career in the importation, growing and shipping of this well-known and so much admired evergreen, decorative plant, *Araucaria Excelsa*, *Robusta*, *Compacta* and the *Excelsa Glauca*.

Our importation this Spring, 1907, has swollen up to the enormous number of 6,000; more are coming with the azaleas in September and October. The florists of every city from the Atlantic to the Pacific Ocean can talk of Aschmann's *Araucarias*.

Now is the time to buy. They will gain in their growth 100 per cent. in two or three months.

The next in rank is our *Nephrolepis Feros*, of which we only grow the best selling and well-known varieties, and of which we have a big lot; Boston, *Elegantissima*, *Whitman* and *Scottii*, three large houses full, in best selling sizes, all pot grown (not bench grown).

Our ferns are not forced or grown in shady houses, but grown exposed to the sun, ventilators are open day and night. Such treatment stiffens the fronds, and makes strong, stout plants, that can be shipped 5,000 miles safely without injury to the plants in transportation.

ARAUCARIA EXCELSA, 5 to 5½ in. pots, 10-12 to 14 in. high, 3 to 4 tiers, 2 years old, 50c. each. Larger sizes, 5½ to 6 in. pots, 2-3-4 years old, 3-4-5 tiers, 60c.-75c.-\$1.00 to \$1.25, each.

ARAUCARIA Compacta Robusta, 6 in. pots, 2-3-4 years old, 10-12-15 to 18 inches high, 3 to 4 tiers, \$1.50-\$1.75 to \$2.00 each.

ARAUCARIA Glauca, 3-4-5 tiers, 2-3-4 years old, 10-12-16-18 to 20 in. high, 6 in. pots, \$1.00-\$1.25-\$1.50-\$1.75 to \$2.00 each.

LANTANA Borbonica, 25c. each.

KENTIA Forsteriana and *Belmoreana*, 6 in. pots, 6 leaves about 25 inches high \$1.00, 5½ and 6 in. pots, 8 leaves, 20 to 25 inches high 75c., 5 to 6½ in. pots, 5 to 6 leaves, strong, bushy plants, 60c. to 60c. 4 in. 13 to 20 inches high 35c. each.

COCOS Weddelliana, 3 in. pots, 10-12-16 in. high, 16c.-18c. to 20c. each.

ARECA Lutescens, 4 in. pots made up, three plants in a pot, 18-20-22 inch high 20c. each.

Boston.**Fruit and Vegetable Show.**

The fruit and vegetable exhibition of the Massachusetts Horticultural Society, which was held at Horticultural Hall on the 10th and 11th inst. was perhaps the best show of its kind in Boston; certainly it was better than any of like character held in recent years. All of the halls were well filled and all of the classes were well represented. The attendance was good, but would have been much better had the days of the exhibition been Saturday and Sunday and the show kept open in the evening. This is a matter which should receive the careful consideration of the officials of the society. Even if it does cost a little more to keep the halls open for three or four hours in the evening, are there not hundreds of people, and especially young gardeners, who would be benefited by the opportunity to attend after their day's work is done? There were few plants or flowers at this show. R. & J. Farquhar & Company had a display of lilies and foliage plants and W. W. Rawson & Company a display of dahlias. One of the most interesting exhibits was the collection of outdoor grapes from the T. S. Hubbard Company, an award of a silver gilt medal being made for the same. A very interesting exhibit was branches of the maiden-hair tree (Ginkgo biloba) loaded with fruit. This came from G. A. Parker of the Hartford Park department. The apple exhibits were very fine, and the pears, while perhaps not up to the standard in coloring, were well represented in variety. Vegetables were very fine indeed and the list of exhibitors was large and included many prominent growers.

News Notes.

The annual meeting of the Massachusetts Horticultural Society will be held November 16, and according to the bylaws of the society the following gentlemen have been nominated for officers for next year: President, Stephen M. Weld; vice-president, Walter Hunnewell; trustees for three years, Walter C. Baglies, Charles W. Parker, John A. Pettigrew, and William Whitman; nominating committee, W. H. Bowker, J. W. Duncan, J. Henry Fletcher, David F. Roy and Wilfred Wheeler.

At the Lenox chrysanthemum show, on the 23rd inst., Robert Cameron and T. D. Hatfield will act as judges, and at the New York show on November 6-8, Robert Cameron and W. N. Craig will be judges; it is expected that quite a few Bostonians will attend this show.

specialty of plants of *Asparagus plumosus* and *Nephrolepis Whitmanii* at present.

Henry M. Robinson & Company have bought the stock of the supplies of the G. A. Sutherland Company.

The Waban Rose Conservatories are cutting an exceptionally fine grade of Killarney roses.

Some of the finest carnations coming into this market at present are from Kidder Brothers, Lincoln; their Harry Fenn are extremely fine.

J. R. Clark has withdrawn from the company bearing his name in West Roxbury and the business is at present being carried on by his partner, Mr. Warren, with Alfred Poetsch as manager.

Welch Brothers are handling a fine lot of chrysanthemums, and although it has been said that not so many of these flowers are now being grown as formerly, yet this firm is selling daily twice as many as in any former season.

William Nicholson is cutting some excellent chrysanthemums, Robert Halliday and Clementine Touse. His Afterglow carnations are in very fine shape at present and magnificent blooms are apparent on this fine variety.

August P. Kamp, a well known salesman for Julius Zinn, died on Sunday of Bright's disease from which he had been suffering for some time, although his late illness dated back only three weeks.

Elijah A. Wood is one of the pioneer chrysanthemum growers of this locality and judging by the fine quality of flowers he is sending in to the market he means to keep up his reputation.

Mr. Beatty, the recently appointed Superintendent of Parks for the Borough of Manhattan, has been in town for a few days looking up park matters generally and especially oiled roads of which there are some forty miles so treated in the Boston City parks. Mr. Beatty was highly pleased with the Boston ideas and it is likely that some of them will be introduced into Central Park.

J. W. DUNCAN.

Kingston, N. Y.

It would be difficult to find a more prosperous looking florists' establishment than that of Valentine Burgevin's Sons at Kingston, N. Y. The general appearance of the grounds and the greenhouse surroundings is as much of a consideration as the growth and production of stock. The entrance to the greenhouses and office buildings is through a broad stretch of well kept lawn surrounded by a substantial stone fence with artistic piers and gateway. There are many public parks as well as private estates that do not come up to the attractiveness of this commercial establishment. Basins of aquatic plants, fancy bedding and the general arrangement of all the Summer flowering stock is in the best of taste. To keep this outside display with a change of plants as the various seasons require, is no small item of expense; on this, however, Mr. Burgevin is satisfied for two reasons—that is, both himself and his customers enjoy it.

While the glass area at this place is considerable, extension is the order of the day. A fine house, 200x26 feet, was completed the past Summer for smilax and *Asparagus plumosus*. This is a substantial piece of work. The outer walls are of stone and all beds and walks on the inside are of concrete. Smilax planted in this house in August last, has already made strings three or four feet long. One of the beds is devoted to poinsettias, where they are planted out for Christmas cutting. Work has already begun on a new cool house for azaleas, hydrangeas and other cool stock; this house will be about 200x12 feet.

Mr. Burgevin's carnations are looking well; all the popular varieties are grown. A new variety that is much thought of here is the Kingston Pet. This is cultivated extensively and is preferred by Mr. Burgevin to many of the existing varieties of similar habit and color.

A few acres adjacent to the greenhouses are devoted to perennials, cannas, dahlias, and other stock for Summer cutting and ornamentation.

NOVELTIES FOR 1908

HARVARD. Glowing crimson (the real Harvard color). This variety will take the place of all other crimsons as it is very free and the blooms are of the finest as to size and quality. It is a very rapid grower and the habit is ideal. Rooted Cuttings, \$12.00 per 100, \$100.00 per 1000. January Delivery.

FAUST. A brilliant scarlet. This variety will replace all of the commercial varieties of this color owing to its extreme productiveness, many plants last December having 20 buds and blooms to the plant. A fine one for the Xmas trade. Rooted Cuttings, \$6.00 per 100, \$50.00 per 1000. January Delivery.

REMEMBER WE GUARANTEE SATISFACTION.

REVIEW OF THE MARKET

NEW YORK.—The cut flower business is anything but satisfactory this week, and prices on everything are taking a downward turn. American Beauty roses are not selling out clean at all, and the best asking price is only 20c. each. Bride, Bridesmaid and other roses are by no means plentiful; still there are more than enough to go around and prices are weak. Chrysanthemums are plentiful, and comparing this week with the corresponding week last year, prices show a very poor comparison indeed, as they are well below what was obtained at that time. Beautiful blooms of such varieties as Polly Rose, Omega, and Lady Harriot, are offered at from \$2 to \$2.50 per dozen; short-stemmed flowers can be had anywhere from 50c. per dozen upward. A few fancy blooms are coming in for which \$4 per dozen is asked, among which are such as Mrs. Henry Robinson, Henry Hurrell and Rosiere.

Carnations have not as yet become very plentiful, and prices are holding their own fairly well. Lilies have taken a tumble in values, and just now there seem to be too many of them in the market. Some dahlias are coming in, also tuberose and gladioli, though not so many of the latter. Lily of the valley is difficult to dispose of. The supply of orchids is ample for all demands.

Asparagus, smilax and maidenhair ferns are also hard to sell satisfactorily at this time, owing, no doubt, to the quantity of natural forest leaves that are being used by retailers. Of these natural leaves the oak is the most in demand, and, unfortunately for the green goods growers, there is plenty of well-colored oak foliage to be had for the gathering.

BOSTON.—Trade has been fairly good and prices are a little firmer this week. Roses are of much better quality and the supply of poored grades has greatly decreased. American Beauty are very fine and the grades of Richmond and Killarney are very much better than generally seen at this season. Carnations are improving daily; however, the prices of these flowers remain as about a week ago.

There are only a few lilies in the market. Chrysanthemums are now coming in in large numbers, but so far sell well, the small grades bringing from \$1 to \$12 per 100, while some fancy grades fetch \$2 and \$2.50 a dozen. Violets yet are not very good, but have somewhat improved. Sweet peas are scarce; gladioli are not so plentiful.

J. W. D.

PROVIDENCE, R. I.—Heavy rains, wind and frost have destroyed about all kinds of outside flowers except cosmos. The early varieties of chrysanthemums are coming in fast enough to fill all orders; they bring from \$1 to \$2 per dozen wholesale. Violets are abundant, particularly the single varieties, and sell from 30c. per hundred. Bride, Bridesmaid, and Killarney roses realize from \$3 to \$6 per 100 according to grade.

Carnations are improving in quality and are bringing from \$1 to \$2 per hundred. Smilax, asparagus, adiantum and Whitman ferns are plentiful.

G. A. J.

CHICAGO.—Last week developed a considerable relaxing in the much more favorable market conditions of the previous week, which was unusually bright, owing perhaps in a degree to the large quantity of flowers used by the many dry goods houses in connection with their annual Fall openings. Then last week produced much larger consignments from the growers in both roses and carnations, and especially in chrysanthemums, which became very abundant toward the latter part of the week causing considerable of a break in the prices of this latter commodity with a much wider range of quality. Outdoor products were much in evidence; gladioli and dahlias in excellent form were abundant. Considerable quantities of weather-beaten asters, feverfew, cosmos, short-stemmed and inferior dahlias and kindred stock, while of little value in itself, tended to overstock the market and reduce values of greenhouse productions, which, it may be said, are steadily improving in quality.

American Beauty roses are still in fairly good call, though chrysanthemums are being used in place of the long-stemmed Beauty to which the pres-

ent crop seems to run; while there is a better call and shorter supply of medium lengths and there are practically no shorts. Other roses are in much better condition and in good supply.

Carnations are abundant and good for the season in both flower and stem, with the exception of Mrs. Lawson, which still are rather short.

Chrysanthemums were probably never so abundant at such an early date and purchasers can be accommodated with almost anything desired both as to color and grade.

Violets are more plentiful and perceptibly improved, finding a seasonable demand. Local singles in goodly quantity and doubles enough to deserve mention are coming in daily and are rapidly taken up.

Lily of the valley is good, in ample supply and during the wedding season is assured of a good call.

The cold weather of Saturday and Sunday nights evidently had an effect on greenhouse products, for the shipments on all lines were light on Monday and not a little difficulty was found in filling orders, especially for carnations; scarlets which have been rather scarce were not to be had. Colder weather if continued will doubtless impart a stronger tone to the market. The killing frosts of Saturday and Sunday nights finished the out-of-door crops for this season.

W. K. W.

ST. LOUIS.—With much more seasonable stock the cut flower trade could be reported as good, but most of the leading retailers say it was not so good the past week; much more was expected. A number of large doings in the social world here are on for the latter part of the month, which should use up a lot of stock which is at present very plentiful owing to lack of demand.

Carnations are selling fairly well, but the wholesalers hardly cleared up on them the past week. Prices range from \$2 to \$3 per 100 for good, long varieties; shorts did not bring over 75c. to \$1 per 100. Rose Pink Enchantress is one good seller, and is in the 3c. class. Chrysanthemum blooms were selling well, and our commission men cleaned up on them every day; there are not too many yet and not until next week can we expect supplies for the daily sales. The best chrysanthemums bring \$25 per 100; next choice, \$15, and some as low as \$8 per 100. There are in now Monrovia, Mme. Ferd. Bergmann, Glory of the Pacific, Lady Fitzwygram and Willowbrook.

The market in roses is large, and some extra good stock is now coming in, but the demand is so slow at pres-

CUT SPIKES OF GLADIOLI

in any quantity from Selected White and Light Shades; Selected Mixed colors and Named varieties of exceptional beauty

WRITE FOR PRICES.

ARTHUR COWEE, Gladiolus Specialist,

MEADOWVALE FARM
BERLIN, N. Y.

ent that a great many are going to waste or are sold at very low figures. The best do not bring over \$4 per 100 in small lots; the bulk of them do not realize over \$2 to \$3 per 100 and \$10 in 1000 lots. Bride and Bridesmaid are somewhat mildewed.

Of lily of the valley there is plenty, with a good demand at \$3 to \$4 per 100. Cosmos is now coming in in large lots each morning, and the price is down to from 25c. to 35c. per 100. A fine lot of dahlias and tuberose are now arriving, but find slow sale.

In green goods, smilax and asparagus are in demand daily. Of other greens the market has abundance.

ST. PATRICK.

CINCINNATI.—Business is certainly very good and all choice stock is selling well. Chrysanthemums are here for good and are bringing 75c., \$1, \$1.25, \$1.50 and \$2 per dozen, in such varieties as Monrovia, yellow; Opah, white; Estelle and Glory of the Pacific. Carnations are coming in slowly, and all A No. 1 grades fetch \$3; the balance are sold at \$1.50 and \$2. In roses, Bride and Bridesmaid sell at 2c., 3c., 4c., 5c. and 6c. American Beauty fetch \$1, \$1.25, \$1.50, \$2, \$2.50, and \$3, according to length of stem.

E. G. G.

INDIANAPOLIS.—Masses of garden flowers, also a liberal portion of greenhouse stock, have caused the market to be abundantly supplied this week. Cosmos and dahlias, the season for which is rapidly drawing to a close, have reached an unusual degree of excellence. The first mentioned wholesale at \$1 to \$2 per 100. Violets are readily sought from among the other stock at \$1 to \$1.50 per 100. Besides these, choice lily of the valley at \$1 per dozen, cattleyas at 75c. each, a little mignonette at 75c. per dozen, or per chance highly colored Killarney roses at \$2 per dozen, are the nice things for corsage offerings.

October weddings are well in keeping with former seasons; not large but numerous this year. It happens that funeral work is lighter than for some time and much stock accumulates.

Carnations are mostly ordered in advance, consequently the local stores are dependent upon out-of-town growers for short orders. The best carnations are selling at \$2 per 100; medium grades at \$1.50 per 100. The local cut of chrysanthemums is large for so early a date, but few large flowers are offered, as the bulk of them brings

\$5 to \$10 per 100. A few select are shipped in at \$3 per 100.

American Beauty roses are much in favor at \$5 to \$35 per 100 wholesale, and \$2 to \$8 per dozen retail. Bride and Bridesmaid have climbed into first place at \$3 to \$7 per 100.

Green goods are scarce in this vicinity and are bringing top notch prices. Tomlinson Hall market was heavily laden the past week, all the growers were having a brisk business. Those supplied with chrysanthemum plants had no difficulty in obtaining fancy prices.

I. B.

FIRMS WHO ARE BUILDING

CUMMINGSVILLE, MASS.—Charles Cummings is building another large greenhouse.

DE PERE, WIS.—A. Van Gemert has built an addition to his greenhouse and a hot water system is now being installed.

ALPENA, MICH.—Alfred Linke has built a new greenhouse, 16 x 40 feet, and expects to build another, 18 x 70 feet this Fall. He also has erected a new office building.

NORTH ADAMS, MASS.—The Weathered Company has just completed a new greenhouse for T. D. Brown on West Street. The work has been in charge of Samuel Burns.

SPRINGFIELD, MASS.—T. D. Brown, West street, has added two new greenhouses to his plant, and now has seven houses in all. The new houses were built by the Weathered Company, New York, are of iron frame and of the latest style.

NEVADA, MO.—Messrs. Kaupp & Son have begun the erection of another greenhouse. The new structure covers nearly one-fourth of an acre and is so arranged that a two-horse wagon can be driven through in hauling soil and is equipped with a new watering device by which the whole can be watered in a few minutes.

LEXINGTON, KY.—Ground has been broken for the construction of the new greenhouses, each 50x22 feet, to be erected at the Kentucky Experiment Station at a cost of \$10,000. One house will be constructed two stories and the other one story in height. One of the buildings will be used in the study of diseases of plants and the other will be used in connection with experimental work on the effect of fertilizers on plants. The buildings will be in charge of Prof. H. Garman and Dr. A. M. Peter.

BELMONT, ILL.—J. W. Kidwell, of Chicago, has purchased a number of acres just across the tracks from the Belmont depot for the purpose of erecting about forty greenhouses. Mr. Kidwell has just completed a well there and he is now getting fifty gallons per minute from a six-inch well. The foundations of these houses are to be made of concrete blocks furnished by the Burus Concrete Block Company and the houses are to be two hundred feet long. Five are now under way, and Mr. Kidwell will continue to build until he has completed the forty. There is to be a seventy-five foot smokestack, which is also to be of concrete. It is expected that this new industry in Belmont will build up that section.

RICHMOND, VA.—The property occupied by Mana & Brown, florists, in Broad street, has been sold to Catherine Straehla for \$30,000. The florists will continue their business without interruption.

The Gardener's Wife.
I chose sweet Rose to be my bride,
Of flowers she is the queen—
The summing up of all good points
That on this earth are seen.

She has no London Pride nor ways,
No Devil's Herb is she,
Not one of Venus Fly Traps and
Loose Strife can never be.

Sage and a Merry Tree I found
In Holy Rose unite,
With Honesty and Thrift to form
The Gardener's Delight.

No Love in Idleness is mine,
We are no Prickly Pear,
No preachers in a Pulpit we,
Nor Medlars hard to bear.

The Lady in a Meadow I
Met by My Lady's Bower,
Heartsease and Everlasting crown
Our Happy Wedding Flower.
—Baynton-Taylor in Gardening World.

it evident that the show will be one of intense interest to the old show visitor as well as the novice. No apathy is now apparent and when the time comes the greatest show ever seen will be produced. All that is needed is work, not by the few, but by every man.

The visitors then expressed their ideas as to what should be done in the way of offering prizes to attract the private gardener to competition and Manager Asmus promised for the Horticultural Society that their suggestions would be given careful consideration.

P. J. Foley, for the Foley Manufacturing Company, and J. P. Degnan, for the Winterson Seed Company, offered to contribute special prizes for the private gardeners' class if agreeable to the society.

F. F. Bentley, for the trustees, reported having appointed E. P. Winterson as temporary treasurer to succeed the late Edgar Sanders; the action was ratified by the club and Mr. Winterson and Charles H. Fisk were placed in nomination to fill the position permanently, the election to be held at the next meeting.

John Vander Wal, Sebastian P. Fisher and Frank Beu were elected to membership and Walter Scott and Frank Mitch were placed in nomination to be voted on next month.

A letter was read from E. G. Hill stating with regrets that it would be impossible, owing to a previous engagement, for him to accept the invitation of the club to be present at this meeting and talk on roses; and it was voted to extend the same invitation for the December meeting which is to be designated "rose night," when the club's certificate will be awarded to any new rose not yet disseminated scoring 85 points or over, and three prizes were offered, \$5, \$3 and \$2, respectively, for roses of any variety, the name of the concern growing the roses to be attached thereto and also the name of the foreman under whose direction they were produced, the prize to go to the latter.

It was voted that the president appoint a committee with authority to represent the club in matters pertaining to the coming flower show.

A committee consisting of J. C. Vaughan, P. J. Hauswirth and Andrew McAdams was appointed to draft resolutions on the death of the club's late treasurer, Edgar Sanders.

The president was authorized to appoint a committee to arrange for a banquet for the entertainment of out of town florists during the show and an appropriation of \$100 was made to help defray the expense of entertaining those coming from a distance of fifty miles or over from this city, it being an unwritten rule that florists residing within that radius should become members of the club and as such defray their own expenses.

Throughout the evening there was an unusual feeling of vivacity apparent, and a number of spirited tiffs and arguments which lent an especial interest to the meeting were participated in by Messrs. P. J. Hauswirth, H. R. Hughes, J. S. Wilson, George Asmus and J. P. Degnan.

News Notes.

With the opening of the busy season Louis Witthold is receiving a largely increased demand for his decorative plant stands which have become very popular in the various sections of the country where they were introduced last year. These stands are certainly a great innovation and of inestimable value to any one who has decorations to execute.

Peter Reinberg is another grower to be affected by the drainage canal as the stable and a good section of the forty-four acre tract at "The Farm," where his new range of glass is located, will be taken by right of eminent domain by the commission.

The Chicago Rose Company had a busy time in their wire work department during the week previous to the Marshall Field opening preparing the numberless wire frames used in this immense undertaking. To prevent Field's competitors from obtaining an idea of their decorative scheme all the wire work had to be secretly executed in the basement, away from the prying eyes of the rubbering throng. It is said the bill for this work ran into the plural thousands.

Louis Heidtmann, president of Gardeners and Florists' Union 10,615, formerly of the City Park gardeners' corps

THE BEST WAYto collect an account is to place it with the
National Florists' Board of Trade

56 Pine St., New York

WHY? Because many debtors will pay the
Board fearing otherwise a bad rating in our
Credit List. Full information as to methods
and rates given on application.and more recently of the Chicago Car-
nation Company's staff at Joliet, has
resigned his position at the latter estab-
lishment, returned to Chicago and has
taken charge of the Union's flower
store at 467 Ogden avenue.An amusing feature of the club meet-
ing last week was the introduction by
J. C. Vaughan of a Teddy Bear of un-
usually perfect construction. The bear
was sent by mail by a friend of Mr.
Vaughan who is visiting Alaska and in
itself is a valuable curiosity. A taxi-
dermist artistically mounted the skin,
placing within the body a dry battery
connected with a button in the back
which, when pushed, caused the eyes to
shine with brilliancy, creating a start-
ling effect on the unexpectant onlooker.E. F. Lemke of St. Paul was a visitor
last week laying in a stock of supplies
for the season, this being his first visit
in several years. Mr. Lemke was a
resident of Chicago in 1865 when the
florist's business was in its infancy.It is well worth the mile walk from
the end of the Lincoln avenue car line
to see the carnations at the Jensen &
Dekema range on West Foster avenue.
The houses of Defiance, Sincerity, Bea-
con, White Enchantress, Winsor, and
Aristocrat, which were grown inside,
certainly constitute as handsome a lot
of plants as could be desired and offer
an excellent opportunity to compare
these novelties growing side by side un-
der exactly the same conditions. The
rest of the range which was planted
from the field includes, besides some of
all the above varieties, Lady Bountiful,
Mrs. T. W. Lawson, Enchantress, Bos-
ton Market, Queen, and Mrs. M. A. Pat-
ten, all of which are in prime condition
with the exception of one house of
Lawson, which, owing to extreme heat
when planted, have not taken hold well.
Mr. Jensen, who is a very successful car-
nation grower, does not plant in very
rich soil, but feeds after the plants are
established.Ernest Weber has made a change in
his main crop this year, having turned
his entire carnation range into Bride
and Bridesmaid roses, which, though**SOUTHERN WILD SMILAX

THE FLORISTS' EXCHANGE.

planted late, have made an excellent growth. Two houses of chrysanthemums at this place are worthy of special mention. The varieties include Dr. Euguehard, Clementine Touse, White and Yellow Major Bonaffon, Timothy Eaton and Maud Dean, on the growing of the last named of which Mr. Weber has previously established a reputation.

E. H. Hunt is this season handling the Glencoe violets and a sufficient proof that the public appreciates the odor of the local product is apparent by the fact that dealers readily pay two or three times as much for them as is charged for those received from a distance.

The George Wittbold Company had a force of men at work last week in their temporary downtown headquarters at 52 and 54 Wabash avenue preparing for the extensive decorations for the opening of the Auditorium theatre as an advanced vaudeville house which occurred the first of this week.

It is reported that the rumored leasing of Nos. 52 and 54 Wabash avenue, for a permanent wholesale flower store by a concern from the Atlas block, has been abandoned, as it is believed that quarters can be obtained fully as desirable for a wholesale business at a much lower rental than is charged for street fronts.

The express companies have in the past been granting a special rate of \$1 per hundred pounds to Chicago dealers on ferns, from the Northern Michigan fern districts, this being a discount of 40c. per hundred pounds from their regular merchandise rates. Last week notice was sent out that in the future the full rate of \$1.40 per hundred would be charged on this commodity. Endeavors are making to have the old rate maintained, but at the present writing the dealers have received but little encouragement.

Will Timme, son of F. W. Timme, until recently connected with the Thompson Carnation Company of Joliet, has entered the employ of Vaughan & Sperry. At present he is visiting among the growers throughout the district, but will later be added to the store staff.

At the home of the bride on the corner of Lincoln and Foster avenues, Bowmanville, on Wednesday evening of last week the marriage occurred of Miss Laechle to George Reinberg, after which Mr. and Mrs. Reinberg left for a visit to Iowa.

Harry Rowe claims that the retail business is perfectly normal and that the trouble with some retailers who are inclined to complain is that they expect too much, or at least expect it too early, and that they forget from year

Hammond's Grape Dust

KILLS MILDEW ON ROSES, CARNATIONS, VIOLETS AND CHRYSANTHEMUMS

ROBERT SIMPSON, Rose Grower

Clifton, N. J., Oct. 11, 1907

Dear Mr. Hammond:

In reply to your inquiry regarding my experience with Grape Dust, would say that I am glad to be able to say a good word for the article in question, because I have found it so generally satisfactory when used for mildew on roses.

I do not know anything about its constituents, nor do I care so long as it does the work, and is as economical as anything else on the market.

During the summer when the steam pipes cannot be brought into use to check mildew, and dusting over the foliage has to be resorted to, we prefer to use Grape Dust rather than sulphur, because it is so much lighter and finer in texture: a given number of pounds will cover more than twice the number of plants; will cover them more thoroughly, and Grape Dust can be put on with a bellows in about one-fourth the time that would be required for Sulphur.

The fact that I have used it continuously for ten or twelve years should prove to you that I consider it the best article on the market for the purpose for which it is used.

With best wishes I am,

Yours very truly,

ROBERT SIMPSON

HITCHINGS & COMPANY

GREENHOUSE DESIGNERS AND BUILDERS
Manufacturers of Heating and Ventilating Apparatus
1170 Broadway, New York

to year that good, steady, settled business never sets in until well into November or until December and that the uncertain spurts of the Fall are never to be relied upon.

Wietor Bros. commenced cutting some fine Clementine Touse chrysanthemums on October 11. The chrysanthemum business with this house compares favorably with last year up to the present time, most varieties appearing much earlier than usual. On October 12, Monrovia and October Frost were practically all cut and sold.

Charles E. Critchell of Cincinnati came up to see the championship base-ball games that were played in this city last week. He was accompanied by Mrs. Critchell who remained here for a few days visiting friends.

The Advisory Committee of the Illinois State Florists' Association met with Dean Davenport and his assistants of the University of Illinois on Thursday evening at the Auditorium Annex for the purpose of considering matters in connection with the experimental work now being carried on under the new state law.

J. D. Thompson of Joliet, who was in the city the first of the week, reports his new retail store a success and carnations as coming along satisfactorily.

The A. L. Randall Company has increased its office force by the addition of two young lady stenographers.

A killing frost on Sunday morning last, the most severe of the season, was quite general in and around Chicago and except in remarkably well protected spots finished the season's supply of out of door flowers which for some time have presented a rather dilapidated appearance as a result of cold nights and light frosts.

Peter Reinberg is making a strong cut on American Beauty and Mrs. Marshall Field roses.

The proceeds of the benefit flower booth at Chicago's great flower show will be contributed to swell the fund already donated by the florists to the family of the late James Hartshorne.

Roman J. Irwin of Vaughan's Seed Store in New York has been spending a few days in this vicinity making a thorough inspection of the several departments, retail, wholesale, and nursery, of the Vaughan interests here.

Charles W. McKellar is making an especially fine display of orchids at present, offering in addition to the dendrobiums and cattleyas previously mentioned, some beautiful Vanda cœrulea and Oncidium Rogersii.

The J. E. Deamud Company have found it necessary to make a further addition to their sales force and their store presents a busy scene these mornings, in fact well through the day.

Poehlmann Bros. Company are going in heavier than ever this year on lily of the valley and Easter longiflorum lilies.

The store of the late Thomas Murphy, at 643 Ogden ave., which has been continued by Mrs. Murphy during the Summer, was vacated the first of the week.

Richard Salm, foreman at the Poehlmann greenhouses, returned Monday

to talk building. Suppose you don't want more glass till Spring, are you going to wait until you need it, before you get busy? Aren't there any number of things that can be done this Fall, so when Spring opens up, the post bases will be in place and the materials ready

for immediate shipment? Spring is not so long off either, and it's a pretty costly piece of business not to have your house ready when your stock is ready. Write us.

FURMAN BOILERS FOR GREENHOUSE HEATING

Furman Boilers have been awarded the Certificate of Merit at Five Different Florists' Conventions. Have a record of 20 years. Over 25,000 in use.

WM. H. KAY, CO., 244 Fulton St. N.Y.

from a tour among the growers of Indiana.

A trip through the J. A. Budlong greenhouses discloses a splendid prospect for the immediate future in roses, carnations and chrysanthemums.

Chicago's Great Flower Show, under which name the coming exhibition will be advertised, is closely approaching and the arrangements for it are rapidly nearing completion. Manager George Asmus, who has taken up show headquarters at Room 1411, First National Bank Building, where he may be consulted daily for the present from 11 to 1 o'clock, reports progress in all directions. The city parks will make a larger and better exhibit than ever before, and will furnish the sod with which the floor of the Coliseum will be covered, which, besides adding to the beautiful effect, will act as an efficient dust preventive. Mr. Asmus says that the answers to letters regarding exhibits are very encouraging, and adds that from an exhibition standpoint the show will be greater than ever seen here.

William F. Kasting, chairman of the National Flower Show Committee, has issued a call for a meeting of that committee during the flower show here on the morning of November 8.

The tickets for the grand ball of the wholesale florists' employees on Wednesday evening, October 30, are meeting with a surprisingly large ad-

THE NEW DUNNING BOILER

☐ Lasts longer, costs less to maintain, is more easily cared for, regulates the supply of heat more perfectly than any other boiler ever used

IN GREENHOUSES.

☐ Two Fire-boxes with thin water chambers between them; two sheets with another thin water chamber between them. Fire travels twice the length of boiler and is all used in heating the water.

☐ Burns hard coal, soft coal, or wood. Used by the U. S. Government. Write for our Free Illustrated Catalogue—38th Edition, with price list. Address

THE MOST Important Thing

about any statement in an advertisement is the truth or falsity of it. Some of the firms advertising their products are not over scrupulous as to keeping their claims within the bounds of truth and as a consequence the goods they sell offset the value of their advertising, which hinders the progress of their business. Let us say here that we are ready to stand back of every statement we have ever made in any advertisement and that we will guarantee our material to be all we claim it to be. You should investigate our material and get an estimate to-day on your needs.

Seed Trade Report**AMERICAN SEED TRADE ASSOCIATION**

George S. Green, Chicago, Ill., president; M. H. Duryea, New York, first vice-president; F. W. Bolgiano, Washington, D. C., second vice-president; C. E. Kendel, Cleveland, O., secretary and treasurer; Leonard H. Vaughan, Chicago, assistant secretary.

The rate of duty on seeds, roots, flowers, kernels and all other green plants, entering the city of Belgrade, Serbia, is \$2 per 100 kilos.

The total value of the seeds exported from the United States to non-contiguous possessions was as under:

1904	1905	1906
\$39,910	\$26,998	\$23,813

CROP CONDITIONS.—The Crop Reporter of the Department of Agriculture gives the average condition of corn on October 1, 1907, as 78, as compared with 80.2 last month, and 90.1 on October 1, 1906. Of potatoes 77, as compared with 80.2 last month, and 82.2 for October 1, 1906. The average condition of flax seed at time of harvest was 78, as compared with 87.4 in 1906.

The Council of Horticultural Trades' Association of England seems determined to stamp out "graft" as far as it possibly can. Having learned that the law as to secret commissions is being broken in various quarters, the Council, through its solicitors, is offering to pay the sum of £100 to anyone giving such information as shall lead to the conviction of anyone in the nursery or seed trades corruptly offering or giving such commissions.

NEW YORK.—George H. Dicks, representing Cooper, Taber & Company, seedsmen, London, England, sailed for home on the Lusitania on Saturday, October 19. Mr. Dicks says he has had a most successful business trip, and reports the demand for seed particularly active all over the United States and Canada, especially in the West. All communications should now be forwarded to his London address—90 and 92 Southwark street.

PHILADELPHIA, PA.—A dinner will be tendered this (Saturday) evening to Hon. George von L. Meyer, by the Union League of this city, when there will take place a discussion of Parcels Post, Postal Savings Banks, and other subjects in the line of postal advance. W. Atlee Burpee is a member of the Union League and is greatly interested in, as well as being a prominent promoter of, the matters referred to.

CHICAGO.—The business of Knud Gundestrup has been incorporated under the name of the Kirkeby & Gundestrup Seed Company, a license for the same having been granted by the secretary of State at Springfield, on October 19. The capital of the company is \$50,000, with the expressed purpose of cultivating and dealing in seeds, the incorporators being Marius Kirkeby, Knud Gundestrup and Alaf E. Ray. The location of the company's business is at 4273 Milwaukee avenue.

George W. Dunseth of Waverly, Ill., won the silver cup offered by Vaughan's Seed Store at the corn exposition for the best ten ears of early sweet corn.

The world's record price was established for seed corn at the National Corn Exposition last week when a single ear was sold at auction for \$250, which would be equivalent to about \$12,000 per bushel. According to the rules the exhibits became the property of the association, and the exhibitor was largely swelled by the sale. In this case the purchaser was the man who grew it, L. B. Clore, Franklin, Ind., who took \$7,535 in prizes at the show, when this ear of "Boone County White" was offered. Farmer Clore started the bidding at \$50 and at raises of from \$10 to \$50 the bidding was fast until the ear was knocked down to the grower at the above unprecedented price. "I can't bear to see that corn go to any one else," said Mr. Clore with a trembling voice. "It's part of my life work, folks. It would be losing a friend if I lost it." What part advertising cut in this transaction, it is, of course, difficult to estimate, but the sale was a legitimate one. On Saturday, the last day of the show, there was a tendency toward very reasonable or low prices, for many prize winning exhibits sold at from one dollar down to twenty cents an ear.

W. K. W.

WHOLESALE LIST

now ready, send for it. Glad to give special prices on nursery stock in large quantities.

The Elizabeth Nursery Co.
ELIZABETH, N. J.

BINGHAMTON, N. Y.—Elmer T. Stanford, president of the George Craver's Sons, wholesale seed dealers of Water street, is contemplating building a large factory for re-cleaning grass seeds. If the plans of the company are carried out, the establishment will be located on the East End, in the vicinity of the Binghamton Lounge Company factory, with convenient switching facilities.

The Craver Company is one of the oldest and leading wholesale establishments of Binghamton and under the able management of E. T. Stanford and E. O. Stanford, the president and vice-president respectively, it has made remarkable progress. So great has been the increase in business in the past few months that the owners have been considering the advisability of locating in a building larger and more adequate to the needs of the concern than the one it now occupies.

LARGE EXPERIMENTAL SEED FARMS IN CANADA.—Ten thousand acres of experimental plots for Western Canada is what T. A. Garton, a noted English seedman, who has been traveling through the West, proposes to establish, says the Montreal Star. Garton has a big scheme for improvement of seed, and, if encouragement is given, there will be a big experimental plot in Saskatchewan and Manitoba, possibly next year. The firm he represents has large areas of seed land in the Old Country, and on these they practice all kinds of experiments for the improvement of seed. The English firm has long been anticipating a branch on this side, and advances have been made by the United States Government with a view to secure them for that country. The men at the head of the firm, however, are Englishmen, and they were impressed with the richness of the Western soil, and so it was decided that the stations should be established in Canada. The idea at present is to secure 10,000 acres of good land, and on this to pursue the work of seed improvement. It is likely that the Dominion Government will make a considerable grant toward the establishment of this enterprise, for it is along the line which the Department of Agriculture has been pursuing for some time.

IMPORTS OF SEEDS, ETC.—October 12-13.—Wells, Fargo & Company, one box seed, eight boxes bulbs; Rooney & Snence, 12 cases plants; Samstag & Hilder Brothers, one package trees; J. M. Thorburn & Company, two cases onion seed; O. G. Hempstead & Son, two cases plants. Arrived on October 13 and 14.—Samstag & Hilder Brothers, one package trees; H. Nungesser & Company, 30 bushels grass seed, 100 boxes grass seed; J. M. Thorburn & Company, two cases onion seed; S. D. Crosby Company, 100 bushels garden seed; H. Frank Darrow, 17 bushels garden seed, 11 cases plants; Wm. Elliott & Sons, one case bulbs, six cases plants; Holland America Line, 201 bags garden seed; W. Hagemann & Company, 85 cases plants, J. W. Hampton, Jr. & Company, 12 cases plants; T. C. Pollock, two cases plants, six cases flower roots; C. B. Richard & Company, 25 cases plants and shrubs; L. J. Spence, 11 bags garden seed; Peter Henderson & Company, 40 bags rape seed. October 15.—Alexander McConnell, two cases plants; W. Hagemann & Company, 20 cases plants; O. G. Hempstead & Company, 62 cases plants, 72 packages plants, 66 tubs laurel trees, one basket laurel trees; McHutchison & Company, 30 cases plants; Kraemer & Foster, one case plants; Merchant Despatch & Transportation Company, 61 cases plants, six tubs laurel trees; Maltus & Ware, 364 cases plants, two tubs laurel trees; Chas. T. Meyer, 90 cases plants; G. H. Petry & Company, 18 cases plants; C. B. Richards & Company, 33 cases plants, 100 packages plants; August Rölker & Sons, 45 cases plants;

Star Union Line, two cases plants; Stumpp & Walter Company, 67 cases plants; Chas. D. Stone & Company, 38 cases plants; F. B. Vandegrift & Company, 11 cases plants; Schulz & Ruckgaber, 76 cases bulbs, October 17—American Express Company, one package plants, October 18.—A. H. Post & Company, 162 bushels seed; M. F. Berry, 52 bushels garden seed; T. L. Hopkins & Company, five bags seed, October 19 and 20.—H. Frank Darrow, two packages plants; Maltus & Ware, two packages plants; Tiffany & Company, two packages plants; Maltus & Ware, four cases plants; H. Frank Darrow, one case plants; C. D. Stone & Company, 38 cases plants; Henry Bischoff & Company, six cases plants; G. Argello & Company, six bags seed; Chas. F. Meyer, 80 cases live plants; Hartford Transportation Company, 23 cases live plants; August Röller & Sons, nine cases plants; Maltus & Ware, 19 cases live plants, 16 tubs live plants; O. G. Hempstead & Sons, 19 cases live plants; C. B. Richard & Company, nine cases plants; Vaughan's Seed Store, one case plants.

EXPORTS OF SEEDS.—The total quantities and values of the seeds exported from the United States to foreign countries for the year ending June 30, 1906, were as under:

Cotton Seed—	23,717,326 pounds, \$268,330.
Flaxseed or Linseed—	5,988,519 bushels, \$7,495,748.
Clover Seed—	2,265,760 pounds, \$267,258.
Timothy Seed—	11,247,080 pounds, \$385,454.
Other Grass Seed	\$217,995.
Other Seeds	\$277,877.

The comparative values for the two years (1905-6) of the total seeds exported from the United States and the countries receiving the largest quantities, were as follows:

	1905	1906
Belgium	\$41,980	\$1,363,602
British Australasia	45,872	24,603
Canada	418,692	1,128,234
Denmark	\$6,451	183,114
France	28,891	414,453

HENRY F. MICHELL CO., 1018 Market St., Philadelphia, Pa.

Seed Trade Notes.

"All at sea" at the present time seems to express as nearly as is possible the position of the larger seedsmen, when seed prices for immediate delivery, or next season's catalogues, are discussed. In one of your contemporary publications I noticed the past week this very pertinent summing-up of the situation as applied to the bean crop: "The man who a few weeks ago thought he knew beans would be plentiful, now finds things have a different aspect." It can be said, and with equal truth, that this applies to almost all seeds of the 1907 crop. Holders certainly seem very loath to part with anything like large quantities until the question of value and price is much nearer settled than it is now; in fact, at present the so-called "market prices" are as widely deviating as there are sources of supply.

I would take this opportunity to call the particular attention of those dealers who handle seeds in addition to many other lines of goods to the fact that in a year of shortages of seed crops like the present many small lots of seeds will very soon be offered, which have been saved here and there; that is, not by regular seed growers, but because of it being rumored that seeds are scarce, the end of many vegetable crops, so to speak, have been allowed to go to seed, with a visionary plan of selling at a good price these seeds to the seedsmen. Such lots of seeds will always be in the market, whenever we have a year of seed shortages (and the present season will be no exception). I do not advise not to buy such seeds, but I do caution you not to put out among your customers seeds that you do not know all about. It is going to be a very trying time next Spring for all of us.

The continued fine weather has greatly stimulated the bulb trade, and every day that such favorable conditions continue is adding much to the enormous wholesale and retail business that will be done this Autumn. The reason our Fall bulb season of late years is so much longer than it used to be, is because little by little our seedsmen have brought so much pressure to bear upon our Holland and Japanese friends to get the bulbs here early in the season, that now we begin receiving hyacinths, tulips, narcissus, crocuses, etc., the latter part of August (lilies and other bulb stock equivalently early), when not many years ago a month later than this was not considered late. Of course, this lengthened season accounts in a large measure for the almost marvellous increases in the sales of Fall bulbs of late years (we must in this connection give due credit to the ever-increasingly attractive bulb catalogues, and bulb advertising that each succeeding bulb selling time sees published). Against this sign of the times, to get hold of everything the first moment possible and sell it, the conservative seedsmen and florist has a word of protest. We must remember that the effect of pushing and urging so strenuously the bulb growers to deliver their stocks earlier and earlier to us each season can eventually have but one result—unripe bulbs will be received which may injure our trade greatly. I cannot but feel that calling attention to this matter will not be unappreciated at this time.

Our Autumn bulb trade is in splendid shape; let us, therefore, by being moder-

ate and sensible in this matter of early deliveries keep it so; for certainly we have about reached the limit in this regard, if we expect perfectly sound and thoroughly ripened bulbs. Any Dutch bulb grower will confirm what I have stated.

The time has come when if we are not actively at work upon our Spring seed catalogues, it certainly behooves us to be so, as it is easy to be late with our lists, for the days between now and the opening of the seed selling season will slip away fast. Those dealers who do not employ a regular expert catalogue-maker will be more than repaid in results to select a strictly horticultural printer to do their work. The average printer has very little notion (and there is no special reason why he should, as a seedsmen's printing is like no other work he does) of a seed catalogue that will sell seeds. To carry through from beginning to end the making of a seed catalogue is a work of much patience and expert knowledge of types, electrotypes, half-tone engravings, zinc-etchings, paper, inks, etc., and you will find much help in enlisting his services of some printer who is well versed in all the innumerable details. You will excuse my bringing a personality into this subject, but I know from experience that the publishers of The Florists' Exchange can help you very much with your contemplated catalogue for the season of 1908. Knowing so well what a "bug-bear" the annual catalogue is, my earnest wish is to help you all I can; and I cannot urge you too strongly to deal with a horticultural printer.

Many will object that the seed catalogue cannot be started now, as it will be some time before selling prices can be made. Granted that this is so, but it is just these various hitches that a horticultural printer knows how to get over. Believe me, the increased trade you will receive from your catalogues by having them done as I have above suggested, will greatly surprise you in substantial financial results. A good seed catalogue is the keynote of a good trade.

I was very much interested in your account last week of the start of the Thorburn seed business by Grant Thorburn in 1799. Apropos of this, I would say how thoroughly and sincerely pleased is the entire seed trade that F. W. Bruggerhof (President of J. M. Thorburn & Company) has again been chosen president of the Wholesale Seedsmen's League for the coming year.

European Notes.

The low prices which have lately ruled for our round seed crops, particularly cabbage, have scared the growers, especially those in Western France where the culture was at one time very profitable. As a result, the contractors who prefer to raise their plants in their own grounds so as to make a careful selection before handing them over to the growers, now find that the growers decline to plant, urging, in the first place, that it is now too late to expect anything like a crop, and in the second that the land needs a change, and the growing of wheat and other grain is far more profitable.

When it is remembered that wheat in England has nearly doubled in price during the past five years, and is still advancing, it must be admitted that the poor farmer has some good reason on his side. As the prices of wheat and other kinds of grain are equally high in other countries, it is not likely that more than one-half of the cabbage arranged for will now be planted.

Growers of sweet peas who have already threshed their crops, have a somewhat doleful tale to tell. One large field that came under the writer's notice has yielded only one-third of the estimated quantity, while a grower of the choicer varieties who had more than 100 bushels of pods picked by the end of September last year has not picked so much as 5 bushels at present. Miss Hemus reports that her splendid novelty, Evelyn Hemus, is a practical failure and other growers have been equally unfortunate.

NOTES FROM HOLLAND.—The month just passed through has fully made up, as regards the weather, for all the shortcomings of its predecessors, and everyone, both in the trade and out of it, ought to feel perfectly satisfied. Bulb growers have no reason to complain, as nearly all sorts of bulbs have cleared out at fair prices, and although hyacinths have not sold as freely as was at first expected, the surplus still on hand is not of such importance as to justify any grumbling.

Crocus have been selling at a premium all through, as was expected, and especially yellow crocuses have been in unusually good demand. Planting operations are now in full swing with all the growers and from present outlook it is almost certain that the area of hyacinths planted out will be considerably less again than last season, whereas tulip stocks have increased considerably.

Darwin tulips have been also in unusually good demand, and especially the choicer sorts are now getting more into public favor than has ever been the case before.—Correspondent Horticultural Trade Journal, Eng.

THE TRADE ONLY—When Writing Please Mention
THE FLORISTS' EXCHANGE.

AN OPEN LETTER!

MESSRS. A. T. DE LA MARE & CO.,
No. 2 Duane St., New York City.

GENTLEMEN:—

Will you kindly announce in next week's *FLORISTS' EXCHANGE*, at our expense, that we are already oversold on one of our new Sweet Peas—BURPEE'S "PRIMROSE SPENCER"—and can accept no more orders from the trade at any price. The fact is, we have not sufficient seed left (after filling orders already booked, from England and America) to take care of our own retail trade. We knew, of course, at the start that the seed in sight of *Primrose Spencer*, was less than half that of *Burpee's White Spencer*. We thought, however, that as our *White Spencer* was practically the same as the greatly admired new English varieties, *Ella Dyke* and *Purity*, the demand for the unknown *Primrose Spencer* would be less than half—and therefore offered both at the same price.

"WHITE SPENCER" is the better of the two, and yet the sales of "*Primrose Spencer*," so far booked are almost equal in number of packets.

Only yesterday upon receipt of another large cable order from England did we find—upon thorough investigation of the seed, now being papered—that we were practically "oversold."

In cablegrams sent to England, yesterday and to-day, we have been compelled to decline orders for many thousands of packets of,

"THE PRIMROSE SPENCER"

It is, therefore, absolutely necessary to announce prominently that while our friends in the American trade who have already placed orders for a definite number of packets, will be protected, yet we now entirely withdraw our offer to other catalog houses, of "PRIMROSE SPENCER."

BURPEE'S "WHITE SPENCER"

however, is the "*Grander*" of the two—as your readers will see by referring to our advertisement last week, or by consulting our Special Circular. Of *White Spencer* we still have sufficient seed to put up some thousands of packets more and hope to be able to accept all orders received before December.

"WHITE SPENCER" is much the better of the two, however, and is so prominently presented in our colored plate, proof of which has just arrived, that we will insist upon reserving for our own trade not less than four times the number of packets retained of the "*Primrose Spencer*."

This letter is longer than intended. To give it sufficient prominence, however, think it should occupy the best part of a page. In hope that it may not have to be charged entirely to "expense account" we shall send you, by express prepaid, electros of several other Specialties, in which those of your readers who issue catalogs, may be interested and on which we shall be pleased to quote prices. Very truly yours,

Wm. Burpee & Co.

EXPORTS OF NURSERY STOCK.—The values of the nursery stock exported from the United States to foreign countries 1904-1906, were as under:

	1904	1905	1906
Canada	\$71,062	\$60,143	\$82,017
Cuba	36,653	62,881	48,115
Germany	9,060	14,700	15,078
Mexico	15,573	19,771	36,532
Netherlands	12,576	10,697	22,350
United Kingdom	120,730	23,930	23,597
Other countries	22,226	18,101	14,367
Total	287,880	219,223	242,056

Mulberries and Their Uses.

For some years past more has been heard of the mulberry than before, because of the use of the tree in forestry plantings; not so much the planting of the tree for its timber—though not without value in this respect—but for setting around plantations for protection of the trees within the inclosure. The Russian, so called, is the one used for this purpose. The Russian mulberry is but a variety of the alba, but having become acclimatized to a cold clime it proved just what our colder States desired, and it is there that it is the most esteemed. When grown East, alongside of the alba, the parent type, no difference is apparent. In fact, some Western men say the alba is as hardy with them as the Russian, and appears as good in every way.

As a shade tree this mulberry is a handsome one, and when one sees the pretty specimens our lawns sometimes contain, it creates a surprise that it is not oftener planted. The sterile form is particularly desirable, and as mulberries are readily raised from cuttings, nurserymen could have a stock of this kind to offer. The sterile form makes a handsome spreading tree, and in common with other forms it keeps its foliage green until the last days of Autumn. Should frosts hold off, it is a good green color until November in Southern Pennsylvania.

The kinds mentioned—alba and its varieties—are looked to, to supply their foliage for the feeding of silkworms where this industry is undertaken, fresh leaves being fed to the worms every day.

Teas' weeping mulberry is a variety of the Russian, having been found as a prostrate grower in a bed of seedlings. Anyone wishing a curiosity should set some cuttings of this weeper. The product will be of a trailing nature, quite a curiosity in the way of growth.

Southern writers often mention the large mulberries of their gardens and the good shade they afford. The overbearing kinds—Downing's and Hicks'—are often planted for their fruit. Evidently from their large rough leaves and strong growth these varieties belong to our native sort, rubra, not uncommon in our woods. The fruit of these is much larger than that of the alba. It is not produced in such great quantities, but the berries being almost black in color, they are more sought than those of the others.

Strangely, while those of the alba type root freely from cuttings, the cuttings of the rubra and varieties are difficult to propagate.

Magnolia Stellata for Forcing.

Wherever plants of *Magnolia stellata* can be obtained not too large to pot, and well set with flower buds, florists would find it an excellent one for forcing. Of course, the best plants for the purpose are those that have been grown in pots for a year in advance, or some that have been so often transplanted that they can be dug with a ball of earth, then there is no disturbance of the root. Magnolias object to transplanting that disturbs the roots and especially to Fall transplantings, it appearing that the cold soil in Winter is objectionable to them. But in the case of small, forcing plants, there is no reason why, with care, they could not be dug with little disturbance of the roots, and then, being under cover, there would be no freezing of the soil to contend with.

If dug from the ground and with but little ball to them, the best place for them would be a cellar where frost did not penetrate, and where the air was damp and confined. The plants would become settled then before time for forcing came, and in all likelihood they would grow freely. This plan has been tried on a small scale with other magnolias and with success. Where free from the soil freezing and with the air of moderate temperature and moist, it is to the plants almost like a long Spring; and it is known, that so far as relates to the North, Spring is the time for planting them. There is something in the cold of soil and of the air that magnolias will not endure.

The *Magnolia stellata* is such a bushy grower that it never fails to set an abundance of buds, and these buds do not all expand at the same time. This is an advantage for forced plants, as it does not necessitate the opening of the flowers on a certain day; there is a succession of them for a week or more in the opening.

little or no trimming, growing naturally into the shape so much admired.

Protecting Hydrangeas.

Florists are often asked by their patrons why it is their *Hydrangea Hortensia* plants, when left out all Winter, fail to flower the Summer following. The reason is, that the shoots which would bear the flowers are frozen back, often to the ground. The plants grow vigorously when Spring comes, but the shoots they make do not bloom. To have flowers there must be some method followed to save the shoots. The plants should be stripped of leaves, the shoots tied together and then soil, ashes, sawdust or some similar material placed over them until completely buried. A frame or a box may be set over the plant, to hold the filled-in material, if desired. Treated in this way the freezings of Winter do not hurt the plants, and on uncovering them in Spring, all will be found in good order, and flowers may safely be counted on.

Bedding in Carroll Park, Baltimore, Md.

This magnolia is the first of all to flower in Spring. Our freezings leave us toward the close of March, and in a month later—or less in warm nooks—the flowers are expanded. This will give a hint as to the time required to force it.

As is generally known, the flowers are light pink in the bud, white when open, semi-double and of refined fragrance. The plant is of Japanese origin, as hardy as can be, grows to a large bushy shrub; and because of its hardness is a good one to sell when in bloom in pots, at Easter, being available for planting in a garden after flowering is over.

The Drooping Ligustrum.

Instead of the above heading the word "weeping" was almost written for drooping. The variety of privet in mind is *Regelianum*, which has come into great favor because of its graceful habit. We all know the California privet and all esteem it for its many uses. Its growth is rapid, its leaves shining green, and bearing pruning well it is indispensable as a hedge plant. Its style of growth fits it as a hedge plant as well as for a single specimen on a lawn.

The *Regelianum* is of an entirely different habit, being of a decidedly drooping character, and its leaves are not of the shining green of the other. As the branches grow they droop instead of having an upward growth. This tends to the presentment of a bush, say four feet high, with a base of six feet in diameter. No doubt, if budded or grafted on the top of some tall stocks of the Californian or of the ibota, there would be true weepers formed, certainly as much weepers as many kinds now so-called—the weeping lilac and weeping ash, for instance—and surely there is a chance for something new in this.

As a hedge plant this privet makes a pleasing appearance. Its spreading habit does not just fit a position along all boundaries, because an upright grower is sometimes more in keeping with surroundings; but as a division line between lawn and garden, or for any other place of similar nature, its beauty is unsurpassed. There is to be said in its favor, too, that it requires

My own plants are not over large and as a mound over them would be unsightly where they grow, they are dug up, carried to a corner of the garden, laid on their sides in a shallow hole, and buried entirely for the Winter, and they do well.

JOSEPH MEEHAN.

Bedding in Carroll Park, Baltimore.

The illustration presented herewith shows some of the bedding in Carroll Park, Baltimore, near the old colonial mansion of the Carrolls. The elms seen in the picture are over 150 years old, and the planting represents two plastic beds surrounded with dwarf *Begonia semperflorens* (new), bordered with *alternanthera* and *echeveria*.

C. L. S.

NOT BURBANK STRAWBERRY PLANTS.—Fred Perry, a Findlay (O.) nurseryman who is waging a campaign against certain agents who have recently been doing business in this country, is in receipt of the following letter from Luther Burbank:

Dear Sir: Your letter of September 14 received. The parties who are selling strawberry plants in your region as being propagated by me are swindlers of the first water and should be behind jail bars, and will be before long, if I can trace them up. I have never sent out a strawberry yet, so they are past masters at lying also.

You have my most sincere thanks for exposing this swindle, similar ones of which are going on all over the country all the time. You are not only doing me a service but the country at large, for this kind of sharks operate on those who are not well able to lose their money.

AMERICAN BREEDERS' ASSOCIATION.—Volume 3 of the annual reports of this organization is nearly completed by the printer. The membership dues of persons, of societies, and of institutions are \$1. The secretary is W. M. Hays, Assistant Secretary of Agriculture, Washington, D. C.

ROSES

Winter Protection.

Among the many things growing outdoors permanently that need more or less protection during the Winter, roses are by no means of the least importance. Hybrid perpetual roses are, in the main, capable of enduring a great deal of cold, but occasionally we have experienced Winters, the severity of which told heavily on roses of this class, teaching us that it is the safer plan to fortify these plants in order that they will be the better enabled to survive such conditions. Probably the best kind of covering for outdoor roses is loose stable manure put on the soil and in among the plants in liberal quantities, and in addition thereto it will be found advantageous to strew marsh hay or coarse straw over the previous covering, so that the wood of the roses will have the protection thus afforded from the baneful effect of the sun after hard freezing weather.

Tea and hybrid tea roses, as classes, are not as hardy or capable of standing a long spell of hard and intermittent freezing as the hybrid perpetuals, and for that reason they require, on the whole, a much more systematic method of protection in Winter. There are several plans now in vogue and practiced with more or less success, which largely depend upon the manner of execution rather than on the method itself. There is no doubt that the safest method of caring for these roses during Winter, is that of lifting them out of the ground just as very severe weather makes itself unmistakably felt, and then either putting them in cold frames where they are heeled, some even going as far as covering them entirely or putting them in pots and placing them, after being potted, in cold frames, merely covering the sashes with boards or any other material convenient and answerable. Another method is that of covering the wood entirely with soil by bending it down for that purpose, in which condition it is held in place with the soil used in the covering. This method, though no more effectual than either of the others, and entailing, as it does, fully as much labor, has this to commend it, that the plants during the season following give better results invariably than those on which had been practiced either of the other methods. Still, again, many content themselves with merely putting a rather thick coating of loose manure over these roses, much the same way as they do for hybrid perpetuals, with varied success.

D. M.

TWO-YEAR-OLD
Everblooming Roses

These plants are on own roots and have made a nice growth. They have been crowded into 4-in. pots and have fine, leathery foliage and are elegant stuff for immediate sales. \$1.00 per doz.; \$8.00 per 100; \$75.00 per 1000.

Cincinnati.

News Notes.
John A. Davy, 83 years old, died at his home at Stillwater, Fla., Friday, October 18. Twenty-five years or more ago Mr. Davy erected, or caused to be erected, a range of glass of considerable size at College Hill, O., which was used in growing cut flowers for the Cincinnati market. Mr. Davy made his money with the old school book firm of Wilson, Hinkle & Company, now the American Book Company, and lost considerable of it in the florist business. Walter J. Gray leased and operated this plant up to a year or so ago, when the property was sold and the greenhouses razed. Mr. Davy's body was buried Monday, October 21, in Spring Grove Cemetery, this city. He was engaged in growing oranges, pineapples and poinsettias in Florida, and was also interested in street railroads.
Business with the store men is a little on the quiet side; there are no good weddings in sight. E. G. G.
CHARLESTON, S. C.—One of the most beautiful stores on King street is the recently opened floral establishment of the recently organized Connelley-Crouch Company, who have bought out the florist department of the J. M. Connelley Company. The new firm now occupies the entire building at No. 296 King street. The officers of the company are the following gentlemen: J. M. Connelley, president; T. M. McCartney, vice-president; A. C. Connelley, secretary; A. E. Crouch, treasurer and manager. Mr. Crouch is a native of Knoxville and has moved to Charleston the past month. He is connected with the well-known floral firm of C. W. Crouch of Knoxville, with branches in Chattanooga and Bristol.

Chrysanthemum Gossip.

I could not help drawing a contrast, as I walked through the houses, between our first benches of chrysanthemums of 20 years ago and what we see to-day. Then it was Christmas Eve, Diana, Grandiflorum, Lord Byron, Mrs. Frank Thompson, Mrs. Geo. Bullock, Mrs. C. H. Wheeler, Robert Bottomly, and Source d'Or, these nine being the only standard sorts that are to-day alive even in memory, while Cullingfordii and Mrs. Cleveland were the recent novelties. And of the 12 first year novelties, not one could now be found in existence we presume—Chas. Delmas, Alex. Canton, Capt. Oudine, Eva, Grand Mogul, Le Dauphinois, Le Tonkin, M. E. Contant, Prefet Rondineau, Montplaisant, Duke of Berwick, Lord Mayor. And yet the dear ladies of 1887 lost their breath, and became excited and flushed exclamation points over the beauty and novelty of the blooms which were displayed for their delight in that long forgotten November, even more than the business-like purchaser of to-day who orders her dozen Monrovia or Polly Rose at \$6 to \$10 per dozen by telephone and calls her florist down if the blooms are not as big as your hat by the date that they ought to be thoroughly "done."
In those days few bench plants ran over 3½ feet in height, while the majority were grown in pots, nicely staked out, and partially disbudded, and 4 and 5-inch blooms were considered fine, and wonderful and beautiful. Mrs. Frank Thompson was a standard of excellence with which comparisons were made!
To-day, a two-foot walk leads us between serried rows of perfectly foliated stems, which appear as dense as a primeval forest as one advances into the shadows. Away above our heads stand the plump round buds of the November varieties, while the earlies are rapidly passing from house to cellar, and after taking a deep draught from a tub of water, they travel on to the consumer. This procession began with Monrovia in September, and will not have passed out of sight till after Thanksgiving.
It is hard to find the poetry or sentiment which is supposed to lurk in the shadow of every flower; with the grower, there is more the spirit and the atmosphere of the horse race, where favorites are sized up, and hopes placed (if not wagers!), and where the first pacing of the newcomers is eagerly noted.
Monrovia is a most remarkable variety; it is the earliest chrysanthemum meriting commercial consideration, and it is the peer of any of the midseason exhibition sorts. There is nothing above the horizon threatening to displace it

as the very earliest big chrysanthemum to date—unless it be the new yellow Golden Glow, and that remains to be seen. But Monrovia must be handled just right to produce these fine early blooms, and a miss in dates often leads to disastrously disappointing results; as yet it stands quite alone, no companion, white or pink, to bear it company in September.
Polly Rose is still our earliest white that has size; the growers who succeed in bringing 3 and 3½-foot stems are quite satisfied with it, as well they may be. But October Frost will hustle it for honors, and it is only by arriving on the scene a trifle earlier that the general grower will give Polly any considerable space after he becomes acquainted with October Frost, which is not a "frost" by any means, but is a white beauty of splendid substance, grand build, elegant stem and perfect foliage. Learn its dates, and its peculiarities and it will rank with Monrovia, though it will probably never be brought in so early—but that fact has yet to be proved.
Then there is the beautiful white from Philadelphia. Early Snow, which follows October Frost. We believe that it, also, is already sure of a place among commercial whites to be grown in large quantity. The purity of color in both these fine sorts is not their least charm.
Clementine Touse, the "early Chadwick," is growing in favor as the trade learns its requirements; no trouble about stem here, and the size and build and fine keeping qualities command respect from the most critical. This robust grower brings three splendid big blooms to the plant, though it must, of course, be given more space to perfect them, than when grown to single stem.
While the pink section has received numerous really grand additions the past five years, we still have only makeshifts in this color among the earlies; Glory of the Pacific is but little grown because of its habit of deadening the color on very slight provocation. A very light tint is admirable, if only it is lively, but Glory of the Pacific is seldom hilarious.
We gave considerable space to Rosiere this year, and are willing to admit that there is nothing better to be had at its date—October 8 to 16—but we wish there were. It is like several others of its color, brings a very insignificant bud which shows no size at all, till a day or so before the flower expands. It has good size, a bright color, nice foliage, and perfects about 80 per cent. of its blooms, and it is the best pink for the date, by far, and we live in hopes of a better one for early October.
Among the immigrants of the year, there is the usual medley, a great gathering of future possibilities, which will soon be determined. Only a few will take their places in the mid-October group, but of these Sisowath, and Commandant Mathieu, two gorgeous yellows, look as if they might outshine anything in their class. Of these, and others, more anon. S. A. HILL.
Richmond, Ind., October 18.
DAVENPORT, IA.—The Tri-City Florists' Club met on October 10, at the home of the president, William Knees in Moline. Trees, lawns and shrubbery were discussed. H. G. Bryant of the Davenport Nursery Company, leading. About 30 members were present. In addition to the business meeting, a pleasant social session was enjoyed.
The next meeting will be held with Otto Boehm, the superintendent of Central Park, Davenport, and the topic for discussion will be chrysanthemums.
BROOKINGS, S. D.—Fred Stoltenburg, the florist at the College greenhouse, has received word that his mother is dead and his father not expected to live, at their home in Berlin, Germany, and he left for New York City, whence he will take passage for Germany. Mr. Stoltenburg's mother was 71 years old, and it is about seven years since he saw her. His many friends here will sympathize with him in his bereavement.
Professor N. E. Hansen has returned from his eastern trip.
SEDALIA, MO.—For the seventh time in succession Archib's Seed Store was awarded first prize, at the fair recently held here, for seeds and poultry supplies.

of Azaleas and other plants just
arriving from Europe.

PRICES TO MEET COMPETITION

Buy now while prices are low
and the weather permits safe ship-
ping.

We protect the trade and have
no department store customers.

ARAUCARIAS OUR SPECIALTY WATCH US GROW

1907 is our 12th anniversary in a suc-
cessful career in the importation, growing
and shipping of this well-known and so
much admired evergreen, decorative plant,
Araucaria Excelsa, Robusta, Compacta and
the Excelsa Glauca.

Our importation this Spring, 1907, has
swollen up to the enormous number of
6,000; more are coming with the azaleas
in September and October. The florists
of every city from the Atlantic to the
Pacific Ocean can talk of Aschmann's
Araucarias.

Now is the time to buy. They will
gain in their growth 100 per cent. in two
or three months.

The next in rank is our Nephrolepis
Ferne, of which we only grow the best
selling and well-known varieties, and of
which we have a big lot: Boston, Elegan-
tissima, Whitman and Scottii, three large
houses full, in best selling sizes, all pot
grown (not bench grown).

Our ferns are not forced or grown in
shady houses, but grown exposed to the
sun, ventilators are open day and night.
Such treatment stiffens the fronds, and
makes strong, stout plants, that can be
shipped 5,000 miles safely without injury
to the plants in transportation.

ARAUCARIA EXCELSA, 5 to 5½ in. pots,
10-12 to 14 in. high, 3 to 4 tiers, 2 years
old, 50c. each. Larger sizes, 5½ to 6 in.
pots, 2-3-4 years old, 3-4-5 tiers, 60c-
75c-\$1.00 to \$1.25. each.

ARAUCARIA Compacta Robusta, 6 in. pots,
2-3-4 years old, 10-12-15 to 18 inches
high, 3 to 4 tiers, \$1.50-\$1.75 to \$2.00
each.

ARAUCARIA Glauca, 3-4-6 tiers, 2-3-4
years old, 10-12-15 to 20 in. high, 6
in. pots, \$1.00-\$1.25-\$1.50-\$1.75 to \$2.00
each.

LANTANA Borbonica, 25c. each.
KENTIA Forsteriana and Belmoreana, 6 in.
pots, 5 leaves about 25 inches high \$1.00,
5½ and 6 in. pots, 6 leaves, 20 to 25
inches high 75c., 5 to 5½ in. pots, 5 to
6 leaves, strong, bushy plants, 50c. to 60c.
4 in. 18 to 20 inches high 35c. each.

COCOS Weddelliana, 3 in. pots, 10-12-15 in.
high, 15c.-18c. to 20c. each.

ARECA Lutescens, 4 in. pots made up,
three plants in a pot, 18-20-22 inch high
20c. each.

GODFREY ASCHMANN

Importer, Wholesale Grower and Shipper of Pot Plants
1012 West Ontario St., Philadelphia, Pa.

bushel basket, made up 2 plants in a
pot, \$1.25 to \$1.50 each.
Piersoni, 4 in. 20c. to 25c., 6 in. 50c. each.
Barrowel, 5½ in. 40c., each.
Scottii, 4 in. 20c. to 25c., 6 in. 50c., 5
and 5½ in. 35c. and 40c., 7 in. very heavy
\$1.00 each.

Ferns for Diabes. A large assortment in
2½ in. pots, \$5.00 per 100.

ADIANTUM Hybridum, the best adiantum
for cut purposes, large plants in 5 in.
pots, 60c. each.

ASPARAGUS plumosus nanus, 3 in. pots,
\$5.00 to \$6.00 per 100; 4 in. \$10.00 per
100; all bushy plants.

CYCAS REVOLUTA (Sago Palm). Plants
from 6 to 10 leaves 10c. per leaf, above
10 up to 35 leaves 50c. per leaf.

PRIMULA OBCONICA, in bud and bloom,
best strain, 3 in. \$7.00 per 100; 4 in.
\$10.00 per 100.

CHINESE PRIMROSES, 4 in. best Jno. F.
Rupp strain, \$10.00 per 100, 5 in. \$2.00
per dozen.

HYDRANGEA OTAKSA, pot grown, 6 in.
to 7 in., 25c., 35c. to 60c. each.

AZALEA INDICA, DEUTSCHE PERLE,
for Christmas forcing, large specimen
plants, \$1.00, \$1.25, to \$1.50 each; other
varieties for later forcing, only best kinds
are imported, 75c., \$1.00, \$1.25, to \$1.50
each.

BEGONIA, Gloire de Lorraine, 6 in., 50c.,
75c. and \$1.00 each.

SOLANUM (Jerusalem Cherries) full of
berries 6 in. and 7 in. pots, 25c., 30c.,
40c., and 50c. each.

Rockland, Me. Oct. 11, 1907.
Mr. Godfrey Aschmann,

Dear Sir:—I received the shipment of
ferns in fine shape and am much pleased
with them. You will probably hear from
me again.

J. N. RICHARDS

Please mention if plants are to be shipped
with or without pots.

All goods must travel at purchaser's risk.
Cash with order please.

JULIUS ROEHRS CO.
RUTHERFORD, N. J.

(59) **Mushrooms.**—Kindly let me
know how many bricks of mushroom
spawn I need for a space of 50 feet
long and 5 feet wide to make a good
bed of them. READER.

New Jersey.

—To plant a mushroom bed of the
dimensions given, we would advise using
twenty bricks; that would allow for
breaking each brick into twelve pieces
and planting the pieces twelve inches
apart throughout the bed.

(60) **Worms Destroying Carna-
tions and Chrysanthemums.**—I en-
close specimen of a larva or worm which
is destroying my carnations and chrysan-
themums at an alarming pace. It climbs
to the bud, or flower, and devours all
the petals, eating a hole through the
calyx and leaving the top of the bud,
which falls off when touched. Its first
appearance was in the shape of a small
green worm wrapped in a cocoon cov-
ered by a carnation leaf. Later, I think,
it developed into the accompanying
worm. It operates at night, and I think
goes into the ground by day. Would
you please give me the name, and advise
as to how I can exterminate it? I saw
these worm effects in a greenhouse in
New York State; it was late in the
Spring and I did not investigate.

New York. S. C. B.

—The caterpillar sent for examination
was so bruised and flattened out that it
was impossible to identify it. From the
description of its operations, however,
we are of the opinion that it belongs to
the family of the army worm, and strict
measures should be taken to get rid of
it. We would advise hand picking of
the worms regularly, and also dusting
the plants with some insecticide, either
tobacco dust or slug shot.

(61) **Treatment of Bulbs.**—Kind-
ly inform me as to the proper time and
method of planting tulips and the other
Dutch bulbs. They will be planted this
Fall out of doors for Spring blooming.
I note that there is a great diversity of
opinion in this matter and would like
your judgment in the case.

Penna. SUBSCRIBER.

—The best time to plant tulips and
other bulbs outdoors is as soon as the
bulbs can be procured in the Fall, pro-
vided, of course, that the planting can
be done without disturbing flower beds
that are yet in full bloom. Where flower
beds are in that condition, it is useless
to disturb the flowering plants for the
sake of getting the bulbs into the ground
early. With the first frost, however, the
usefulness of soft-wooded flowering
plants, in most cases, is over, and the
beds can be immediately prepared and
the bulbs planted. One reason why bulbs
should be planted early is, that, if the
planting is delayed long in the Fall, wet
weather is likely to come, which makes
the soil sticky and puts it in bad con-
dition for planting purposes. If the beds
are to be planted in designs, the best
way to do is to remove four or five
inches of soil, lay the bulbs according
to the design required, pressing them
lightly into the ground, and then cov-
ering them with 3½ inches of soil, taking
care that the bulbs are covered evenly
all throughout the bed. If the bulbs
are not to be planted in solid blocks or
designs, they can be planted with a
trowel, leaving the bulbs three inches be-
low the surface of the ground. While
late planted bulbs usually come along
all right, it is always the safest plan
for the gardener or florist to get his
bulbs into the ground as early as pos-
sible after they are received, as that is
the best place for them.

LAGER & HURRELL, Summit, N. J.

(62) **Water from Artesian Well.**
—We are seriously thinking of drilling an artesian well for water, to water our plants with, and would be pleased to have your opinion and advice in regard to the action, and what effect artesian well water has on roses, ferns, palms, begonias, etc. We understand artesian well water contains 21 grains of salt to a gallon and over, and we would be pleased to have you advise us in regard to this, also how many grains of salt to a gallon tender plants will stand.
Do you know of any florist using artesian well water? M.

La.
—If the water really contains 21 grains to a gallon of salt, sodium chloride, it might possibly have some harmful effect on greenhouse plants, although I cannot say positively that it would. It would seem to be a very simple matter to test the effect of the water on plants such as mentioned.

The term "salts" or "salts," however, as used in connection with the mineral contents of water is indefinite, and may mean the salts of phosphorus, sulphur, potassium, etc. The term is also used to cover loosely the entire mineral contents of a water and may include in addition to the above magnesium, iron, aluminium, etc. Many if not all mineral waters contain small quantities of common salt, but a water containing 21 grains to the gallon would be decidedly salty to the taste.

If the water is merely an ordinary "mineral" water containing in total 21 grains of mineral matter to a gallon, it will not injure any greenhouse plants no matter how sensitive. Hundreds of florists are using similar water.

The water here (Madison, Wis.) from deep artesian wells and heavily charged with minerals is used by the florists with no ill effect on the plants. I subjoin analysis of same:

Potassium sulphate	0.237
Sodium sulphate	0.286
Sodium phosphate	Trace
Bi-carbonate of soda	1.094
Bi-carbonate of lime	15.224
Bicarbonate of magnesia	12.984
Bi-carbonate of iron	0.214
Sesqui-oxide of aluminium	Trace
Silica	0.414
Sodium chloride (common salt)	0.292
Organic matter	None

F. CRANFIELD.

(63) **Winter-flowering Sweet Peas.**—I have a house, 20x100 feet, 8 to 15 feet high from walks, in which I wish to grow Winter sweet peas. Which would be preferable—solid beds (walled up), raised wooden benches, or planting in the ground, with bricks six inches high as sides? In what depth of soil should the peas be planted, how far apart, and what distance apart should the rows be? What is the best tying material? What night and day temperature respectively do the plants require?

—Winter-flowering sweet peas can be safely planted in a house 8 to 15 feet high. Beds, walled or hoarded, 6 to 10 inches long, are the best. The soil should be about 15 inches deep, well manured with short cow manure. Have the plants 3 to 5 inches apart in the rows, and the rows 4 to 5 feet if planted lengthwise and 10 to 12 inches if planted crosswise. For supports, run one wire on top and one on bottom of each row, connecting the same with a string, the same as is done with smilax. The temperature at night, before the plants begin to flower, should be 40 to 45 degrees, and during the day 55 to 65 degrees, according to cloudy or bright weather; when beginning to bloom, the temperature can be raised to 50 degrees at night and 60 to 75 degrees during the day.
ANT. C. ZVOLANER.

(64) **Stem Rot on Carnations.**—I send diseased leaf of Enchantress found in my carnation house and it seems to be going from one to the other. I have Lady Bountiful, Lieutenant Peary, Boston Market, and Genevieve Lord, also planted with them. Can you tell me if it is stem rot or what it is, and if anything can be done or used to help them? The plants were exceedingly fine when planted in the first of September and now about one-fourth of the house looks very bad; the rest looks as if they were going to go just like the one sent. Do you think too much water would cause the trouble?

O. Y.
—The carnations are affected with stem rot, and the only thing to be done

DREER'S SPECIALS

COCOS WEDDELIANA

Cocos Weddelliana

A grand lot of this graceful Palm in fine condition. We especially recommend the single 5-inch pot plants.

3-inch pots, 8 to 10 inches high	... \$2.00 per doz., \$15.00 per 100
5 " single 24 "	... 12.00 "

New Yellow Morning Glory.

Yellow Imperial Japanese morning glory is the introductory name of an unusually attractive variety of this favorite annual climber, first distributed this season. Our trials show rather low seed germination, scarcely averaging two plants to the packet, but they are vigorous growers when established. The green foliage is marbled with white and pale yellow, while the numerous blooms are of good size and quite persistent in daylight, remaining open until afternoon of the duller days. The color is creamy yellow, very clean and attractive. Occasional flowers have a quarter or half segment of light lavender blue, and rarely the entire bloom is of a bluish tint. As the result of patient selection this is an interesting plant and it is intrinsically dainty and decorative.

The morning glory is one of the rather few plants long cuddled by Japanese gardeners, and many extraordinary varieties are popularly used in that far-off country for the decoration of tiny cottages and doorways. Japanese ipomoea seeds were first imported in quantity about 14 years ago, and offered under the name of Imperial morning glories. They proved a revelation to those only accustomed to the common home-grown sorts, the flowers greatly exceeding the latter in size, diversity of color and extraordinary markings. There were parti-colored varieties of the oddest shades with double as well as single blooms, kinds with strangely ruffled and attractively marbled foliage and in short a bewildering mixture of new forms. It appears difficult now to secure seeds of as fine varieties as were at first imported, and it is claimed the Japanese have of late become careless in the culture of this attractive plant. Botanically the Japanese Imperial morning glories appear to be largely hybrids between *Ipomoea hederacea* and *I. rubro-cœrulea*, both species native to semi-tropical America, but probably carried to Japan in the remote past. The finer strains of "Emperor" or "Imperial" Japan morning glories quickly deteriorate when carelessly grown in this country.—W. V. F., in Rural New Yorker.

Nurserymen and the Rose Society.

The report of the proceedings of the Detroit meeting of the American Association of Nurserymen, held this year, contains a record of the remarks of E. G. Hill, Richmond, Ind., a delegate to the nurserymen's convention from The American Rose Society. Among other things Mr. Hill said:

"In looking over the membership list of the American Rose Society, I find but very few nurserymen enrolled therein. I think that is a sad mistake, because the rose is an important factor, I know, in your business, and in fact, in the business of every man who sells trees. Mr. Hill then went on to tell of the objects of the Rose Society, and added:

"The American Rose Society is in earnest in its work, and it wants to enlist your active co-operation; we want you in its membership, and it is the purpose of the officers and members of that society to be able at some time in the very near future, if not this year perhaps next, to give an exhibition of roses in the month of June, varieties that you nurserymen are interested in. I want to say also for your encouragement that next March the society's meeting will occur in Chicago and classes have been provided for roses in which you nurserymen are particularly interested—the Rambler roses, the hybrid perpetual roses and the different classes of bedding roses, and Mr. Philip Breitmeyer, the park commissioner of the City of Detroit, has generously offered a premium of \$200 for the best exhibit in that particular class of roses.

"Now a word in regard to our society. We are not bankrupt by any means; we have a life membership fund of \$2,300 or \$2,400; we have some 250 paying members and the membership in the society is but \$5 a year, but the life membership calls for \$50. I know all the members in this American Rose Society earnestly desire that you nurserymen come in in goodly numbers, sufficient if necessary to take the control of the society, for we ought certainly to have a rose society in this country that shall be national in its character, so that we can bring these finer varieties before the American public in less time than it has taken in the past few years.

"Now, the value of exhibiting is very important; I do not think that the members of the florists' profession in this country sufficiently realize the importance and benefit accruing from exhibiting their product, and I fear that you nurserymen are even—I was going to say a little more lax than the florists. But our Society of American Florists, and, by the way, it is a daughter of your parent society,—has raised a fund, I believe it is \$10,000, intending to give a show, national in scope, national in character, that shall embrace the nurserymen's as well as the florists' products of the country. That is what we want. I am sorry that we cannot affiliate and come closer together, because our interests are interwoven and allied, so to speak."

The record does not show that any discussion ensued on Mr. Hill's remarks. It is to be hoped that, in this instance, "silence means consent," and that all nurserymen who heard or who read his words will see the force of Mr. Hill's contention regarding the benefits to accrue to the nursery trade from the active work of The American Rose Society.

There is probably no class of roses more popular for outdoor work to-day than the Crimson Rambler and its various hybrids. The sale of these is largely in the hands of the nurserymen, and they should support and encourage the Rose Society in its effort to popularize by its exhibitions these roses as well as others handled extensively by the nursery trade. This can best be done by affiliating with the organization, co-operating with it in its shows, and donating premiums to be competed for at these shows.

We earnestly trust Mr. Hill's timely and suggestive comments will meet with a ready and generous response from the nurserymen.

PAMPHLETS RECEIVED.

TRANSACTIONS OF THE MASSACHUSETTS HORTICULTURAL SOCIETY for the Year 1907. Part 1.—Contains papers and discussions on the following subjects: The Iris and its Culture, The Possibilities of Peach Growing in New England, Collecting Orchids, The Renovation of an Old Orchard, The Home Vegetable Garden, Certain Uses of the School Garden, Forestry from a Commercial Standpoint, The Planting of Streets and Waysides. Some Bacterial Diseases of Plants, their Nature and Treatment; and The Gardens of Italy.

"HENRY HART OF HARTRIDGE."—We are in receipt of a short love story, entitled, "Henry Hart of Hartridge," published by Fairbanks, Morse & Company, Chicago, Ill. Numerous illustrations of the farm scenes showing the possibilities and advantages of modern machinery appliances are interspersed throughout the story. The tale is interesting from start to finish and to those who contemplate improving their country places the book will be found rich in practical suggestions. A copy will be sent free by the publishers to those interested.

American Carnation Society.

Peter Fisher, the originator of the Beacon, offers \$12 for the best 50 blooms of that variety, \$8 for the second best and \$5 for the third best, to be exhibited at the exhibition of this society in Washington, D. C., January 28 to 30, 1908.

ALBERT M. HERR, Secretary.

Chrysanthemum Society of America.

Appointment of Committees.

President Loveless has announced the committees to examine seedlings and sports on dates as follows; October 26; November 2, 9, 16, 23, 30, 1907.

Exhibits to receive attention from the committees must in all cases be prepaid to destination and the entry fee of \$2 should be forwarded to the secretary, not later than Tuesday of the week preceding examination, or may accompany the blooms. Special attention is called to the rule requiring that sports, to receive a certificate, must pass three committees.

PHILADELPHIA.—A. B. Cartledge, chairman, John Westcott, Wm. K. Harris. Ship flowers to chairman, 1514 Chestnut street.

CINCINNATI.—R. Witterstaetter, chairman, James Allen, William Jackson. Ship blooms to Jabez Elliot Flower Market, care of Janitor.

CHICAGO.—J. B. Deamud, chairman, Andrew McAdam, George Asmus. Ship to chairman, 51 Wabash avenue.

BOSTON.—Elijah A. Wood, chairman, William Nicholson, James Wheeler. Ship to Boston Flower Market, 1a Park street, care of chairman.

NEW YORK.—Eugene Dailedouze, chairman, William Duckham, A. Herrington. Ship flowers to New York Cut Flower Company, care of chairman, 55 to 57 Twenty-sixth street; all flowers to be on hand by 2 p. m. on day of examination.

The official scales of the C. S. A. are as follows:

For Exhibition Purposes	For Commercial Purposes
Color 10	Color 20
Stem 5	Form 15
Foliage 5	Fulness 10
Fulness 15	Stem 15
Form 15	Foliage 15
Depth 15	Substance 15
Size 35	Size 10
Total 100	Total 100

The following gentlemen have been secured to pass on the exhibits at the New York show to be held November 6 to 8, 1907: Eugene Dailedouze, Flatbush, N. Y.; James Wheeler, Brookline, Mass.; William N. Craig, North Easton, Mass.

Work of Committees.

NEW YORK, October 19.—Mary Donoellan, brilliant yellow, Japanese incurved. Exhibited by C. H. Totty, Madison, N. J. Scored 88 points commercial and 86 points exhibition scale. DAVID FRASER, Secretary.

PARCELS POST IN GREAT BRITAIN.—The British parcels post system has been in operation for nearly a quarter of a century. Curiously enough, it had its origin in the demand of certain florists and growers of Spring flowers in Kerry and other portions of the United Kingdom and a great distance from the London market. As soon as the concession was made to them they asked for an increase in the size of the packing, so they might send full length orchid spikes instead of mere blooms.

The maximum weight in Great Britain is eleven pounds, and the total for that weight is 22 cents of our money. That is an average of 2 cents a pound, as compared with the proposed rate of 12 cents a pound in this country. In England an inland parcel may have a maximum length of three feet six inches, while the greatest length and girth combined cannot exceed six feet.

There are refinements in the parcels post business which have been carried into effect successfully in Great Britain. The post office department, for instance, virtually insures a package up to \$10, and for 4 cents extra increases the limit of the guaranty to \$25. For a special fee of 35 cents the government will give an insurance certificate up to a maximum value of \$1,000.

NEWPORT (R. I.) HORTICULTURAL SOCIETY.—At a meeting of the society held September 24 the secretary's report of the recent exhibition was read, which showed that the affair was in every way unusually successful.

After the adoption of the report and the request made by vote that all premiums awarded by the judges be paid to the successful exhibitors, several of the latter who were prominent exhibitors and present at the meeting, announced their desire to donate a considerable proportion of their prize money to the society, the same to be used for the general good thereof. This commendable action was heartily applauded and the donations received with many expressions of appreciation and approval.

Nine candidates were proposed for membership at this meeting. During the latter part of the evening refreshments were provided by Colin Robertson and a pleasant hour was spent in social intercourse. D. M.

OUR READERS' VIEWS

Dwarf Boltonias.

Editor Florists' Exchange:

I always read with much interest the nursery department of your paper conducted by Joseph Meehan. In the issue of October 19 he refers to the dwarfing of herbaceous plants, more especially the holtonias. Dwarfing these plants artificially has been overcome by a recent introduction, *Boltonia latissquama* nana. The writer has had the pleasure this Fall of seeing large beds of this beautiful plant growing only 15 inches to 18 inches high being able to sustain itself without tying or staking. It flowers with greater freedom than the parent plant; this feature combined with its dense sturdy growth makes it a great acquisition to our list of hardy perennials. It was raised and introduced by J. T. Lovett, Little Silver, N. J. J. H. Cook.

Club Root on Carnations.

Editor Florists' Exchange:

Regarding the query in Question Box, issue of October 12, relative to club root on carnations, I had a similar experience at Richmond, Va., and the best and only remedy I found was to make holes with a dibber a foot or so apart, between the rows, pouring into these one-half teaspoonful of bisulphide of carbon, refilling the holes with the soil. The gas resulting from the bisulphide permeates through the soil, killing the germs responsible for this disease. The germs are found naturally in many soils, and whenever suspected, or known to be present, it is a wise plan to "cure" the compost pile beforehand. A cheap and easy way to do this I find is by making holes in the pile and putting in each, say, one-half cupful of gasoline, covering or refilling the holes with the soil. The gas will kill all insect life in the soil. By doing this a week in advance of the time necessary to use the soil, the gasoline will completely disappear, and the soil be safe to use. E. Penna.

The Plea and Plight of the Private Gardener.

Editor Florists' Exchange:

Evidently I failed to make my meaning clear upon one or two points in my letter published in your issue of September 28. I certainly had no intention of imputing carelessness in the selection of officers of the S. A. F., or of the consequent reflection upon the character of those officers. My intention was to call attention to a trait of character prominent in many of us (at least, I find it prominent in my own character, and I think that I am not quite alone) of neglecting such public duties as assisting in the selecting of the men who are to administer the business of our political and business organizations. I agree with Mr. Birnie, that to the best of my knowledge the officers of the S. A. F., past and present, are and have been honorable and efficient, but it is nothing to the credit of many of us that such men have been chosen, and had it been otherwise we should have been ready with severe criticism just the same.

In reference to the lack of interest displayed by the great majority of florists and gardeners in the national society, I would respectfully suggest that if Mr. Traendly will appoint a committee composed of Messrs. C. H. Totty, John B. Nugent, Bobby Schultz and Billy Rickards, provide them with the necessary munitions of war, and have them visit the various florists and gardeners' organizations throughout the country, they will induce such an enlistment of new members and attendance at the convention next August as will make all previous conventions look like the proverbial thirty cents. I. L. POWELL.

Uniform Names of Plants.

Editor Florists' Exchange.

In James MacPherson's notes in last week's issue under the heading "Uniform Names of Plants," he says among other things: "Plant names are not a question of this county or that; they are world names"; and a better argument on his side could not be used. If the question of the wisdom of the attempted change of century-old names concerned this country alone, if agreeable to the majority of those interested, it would make but little difference, even if made without cause; but this question of change concerns the whole world. Our nurserymen, florists and seedsmen have connections all over the world; and take any catalogue you will of the leading business houses of England, France, Germany, their dependencies, and other countries, I have yet to find one which does not follow the names of plants the usages of centuries give them the right to follow. The names in their lists are those sanctioned by centuries, many of them; they are names every one in the trade knew the plants by here until those not in touch with the business attempted to change

them. Uniformity in names has been taken away in part and confusion given us instead.

As I suggested some time ago when writing on this subject, common law secures to the public certain streets that have been used and unclaimed for 20 years. It debars anyone from claiming a debt if not claimed in six years. Yet those who wish to change the names of plants come before us with claims a hundred years old, as I believe some are, to change names that have long ago become public property. The confusion they have made in the horticultural trade is very great indeed. As an instance, but this very week a correspondent wrote a nurseryman here for *Carya alba*. This is known the world over as the shellback hickory; but it transpired that the customer really wanted *Carya tomentosa*, as its older name is. Further, it seems the old *Carya alba* is now *Hicoria ovata*, and our old *C. tomentosa* is *Hicoria alba*. I say "is now," but understand me, it is not so outside of the few in the United States who so call it. Haage & Schmidt's, and Vilmorin's catalogues, which happen to be before me on my desk, both have the old name *carya* and all the specific names as they have always been.

The work of those who change the names has created endless confusion in what was uniformity and so impracticable were some of their changes found, that they themselves have had to recede from some of them, leaving in the lurch such works as Britton & Brown's and maybe those of others who followed them in their changes.

Bailey's work is a most excellent one, one I often consult, and my only regret is, that he has adopted so many of the names which have made confusion out of uniformity in our country.

Speaking for those firms engaged in a large foreign trade, as so many of ours are, it is of no value to use the newer names in their catalogues. The foreign houses know but the old names—those found in Index Kewensis. JOSEPH MEEHAN.

Editor Florists' Exchange:

Please assure my friend Miller that I do not question Bailey's cyclopedia for anything but its want of uniformity of names. He has shown how it all happened, and he knows perfectly well where the shoe pinches.

But commercialism aside, put out your hands, for God's sake, and help the only institution in the world that has made a *well-sustained effort* to reduce the intolerable maze of names to a standard by using it. Take the *Genera Plantarum* if you want generic names; *Index Kewensis* if you want species; *Kew Guides* if you want both—and more varieties of some things than you have ever dreamed of; for creation has been ransacked. No doubt, though, Dr. Miller can add to them; only, as he says, those Kew folks are "lumpers" and may exercise their faculty. JAMES MACPHERSON.

P. S. Is it possible that these works are not in the libraries?

Stray Notes from Across the Atlantic.

A note has just reached me from your side inquiring whether I am in need of paper or ink, or, worse still, am I defunct. No! I am not hard up for a sheet or two of paper; nor do I feel like passing in my elips just at present. Indeed, I am very much alive, but unfortunately I haven't discovered how to make the days longer than 24 hours.

Such a lot has happened since I last wrote that I've got to look back a bit.

The American Peony Society.

I was greatly interested in the doings of the American Peony Society. It seems curious that we have no special society to look after this flower on this side, despite the fact that the great majority of peonies hail from this quarter of the globe. Still, it's pleasing to know that the American Peony Society means business, for it is only too apparent that things need straightening out a bit with regard to this flower, as well as a great many others.

I take it that the peony shows in future will advance as regards decorative value. The illustration in issue for July 6 shows rather a bald view. Exhibitions must be something more than a mere display of flowers, they must be decorative, and educational. The general public are queer "kittle"; often they will gaze at a flat display of bloom, with just a cursory glance, and pass on. Set the same flowers up in tiers, or arrange them in special stands, etc., so that every flower shows, and even the most ordinary individual will stop in admiration. The next thing he does is to find out what the particular flower is, its name, etc., and he goes away determined to grow it himself.

Exhibitions.

Oakson Edwards is right respecting the keenness of competition at our big shows. I recollect counting 60 dishes of culinary peas in a cottagers' class. There were only three or four prizes. I reckon a few of our modern secretaries could wake things up as regards shows in the United States.

One does not find sparse attendances at our shows, be they big or little. The fortnightly meetings of the Royal Horticultural Society in London are a sight sometimes. The elite of society get wedged like sardines when anything special is on. Things were pretty hot at the National Sweet Pea Society show last July; and even W. Atlee Burpee and the young Burpees were mopping their brows, and murmuring about the crowd and the heat. Isn't that so, Mr. Burpee? At Shrewsbury I have seen a crowd of 70,000 squirming through the tents like flies around a jam pot. There is no turning back when once you get inside; it is a case of move with the crowd, till you reach the end.

Sweet Peas in California.

I was interested in Mr. Zvolanek's letter on July 13. His remarks respecting the way sweet peas behave in California are not calculated to impress those who rely upon California seed, especially of the Spencer type, which is prone to expose the stigma. I myself have seen plenty of malformed flowers looking more like *clarkia* blooms than sweet peas, but I have never troubled to save seed of such flowers in order to see what comes from them. I shall, however, watch things closely in future, as I shall have the opportunity of dealing with a good many acres grown especially for seed.

I may say I have seen bees forcing down the keel of sweet pea flowers, and have also found the tiny black beetle inside, but these flowers have always been fully developed, so that fertilization had already been accomplished.

Variation in Sweet Peas.

Respecting the variation of plants from one and the same seed pod, according to Mendel's theory this variability should take place the second year, and not the first. Curiously enough, I have watched an interesting item this season. Last year King Edward VII. sported in many places, the sport being a deep plum and reddish maroon color. It was not restricted to any particular stock of seed, for it came from several stocks. I saved a pod or two myself, expecting, of course, to get its like again, being as it was a distinct thing. From ten plants I had one of the true plum color; the rest were white, pink, rose, and mauve. The mauve was similar to Mrs. Wright; the rose to Prince of Wales, the pink to Prima Donna, but the white was distinct. If the plum color had been the result of hand fertilization, I should have expected the splitting up this year. But it was not. It came out of King Edward VII., and I cannot believe insects had anything to do with it.

The Countess Spencer Type.

I think I have already stated how Countess Spencer was raised. At any rate Mr. Zvolanek is right off, when he imagines Mr. Cole used pollen other than from the true sweet pea. Mr. Cole, by the way, is a very modest and silent man; therefore, it is not surprising his name is unfamiliar in the United States. Those who have seen the National Sweet Pea Society's publications are, however, familiar with the name of Silas Cole.

For several seasons it was generally understood that Countess Spencer came as a sport from Prima Donna, and neither Mr. Cole nor anyone else sought to remove this impression until a year ago. Even now there are many who doubt the authenticated parentage.

I quite agree with the remarks made by E. D. Darlington respecting the necessity of good cultivation for the Spencer type of sweet pea. The better they are treated, the more wavy they come. Helen Lewis will show as many as three standards and four wings at a time, while such sorts as John Ingman, Olive Bolton, White Countess and Cream Countess will come so fluted as to look as if they were goffered.

The paragraph from *The Gardeners' Chronicle*, on July 20, is somewhat weak, to my mind. In the first place, Triumph, as well as Prima Donna and the unfixed seedling, is given as a parent of Countess Spencer.

I have been assured that Countess Spencer, before it was sent to California, was quite fixed, the raiser having a stock perfectly true. The point about Countess as introduced, that Mr. Cole has never cleared up, is that the great majority of the rogues or sports were not of Spencer type. Some would say this is quite natural, but the raiser says something else. If the various breaks were the result of insect fertilization in California or elsewhere, why is it we can get Countess, Mrs. Hardcastle Sykes, and one or two more quite true now?

Mr. Cole has a great many new seedlings of the Spencer type, all of which he means to keep until he has fixed them. His Lady Sarah Spencer at the Reading trials was true, and the giant maroon, Silas Cole, nearly so.

Why does the curiously contorted Phenomenal come absolutely true? I am interested in this Californian production, and am wondering how it came about. It is not a Spencer, but very near it; for it is wavy to some extent. The growth is, however, distinct from the Spencer type. T. WESTON.

Water Lilies and Other Aquatics; Their Relation to Horticulture.

By G. V. NASH.

(Continued from page 531)

Ferns and Other Plants.

Among the ferns which may be used are the American royal fern, the cinnamon fern, and Clayton's fern. Do not forget to add to these the stately ostrich fern. Some of our native orchids may be employed also. Among these are the yellow fringed-orchis (*Blephariglotis ciliaris*), the small purple fringed-orchis (*Blephariglotis psychodes*), the grass-pink (*Limnophyton tuberosum* or *Calopogon pulchellus*), and the showy lady's-slipper (*Cypripedium reginae*). Of course there are many plants from other climes to select from. The Japanese iris (*Iris laevigata*, or *I. Kämpferi*, as it is more frequently called) is a prime favorite among these, its flowers being perhaps the largest and showiest among the irises. It may be had in a host of forms, remarkable for their beauty of coloring and shading. If a mass of purple is desired, nothing, perhaps, will give it more effectively than the spiked loosestrife (*Lythrum salicaria*), an old-world plant, but found sometimes quite commonly as an introduction here. For a rich-red effect nothing will excel that conspicuous plant of our stream borders, the cardinal flower (*Lobelia cardinalis*). This planted in a mass with a border of green produces a most striking effect. Its near relative, with blue flowers (*Lobelia syphilitica*), the great lobelia or "blue cardinal flower," is useful where masses of blue are desired.

Grasses.

The aquatic garden would not be complete without the grasses. Showy and ornamental kinds suitable for this purpose are not numerous. One of the most striking, an annual, is the wild rice, or Indian rice (*Zizania aquatica*). This is a luxuriant grower and very decorative, its large panicles making their appearance in August and September, and its bright green foliage adding a touch of Spring freshness to the season. Another which may be used is the common reed (*Phragmites Phragmites* or *P. communis*) of our meadows here, with grayish-green foliage. This is a taller grower than the wild rice, and its inflorescence when mature has a feathery effect, much resembling that of the old-world reed (*Arundo donax*), a much more vigorous plant, but not as hardy here as its American relative. The Japanese reedgrass (*Miscanthus sinensis*) and its various forms have the advantage of being late bloomers, when almost all else has failed, and hence are a decided addition to the frame. At all times they are graceful in their foliage effect, and later with their feathery plumes are very attractive objects. Among the sedges our choice is rather limited, and we must borrow our most effective plant from northern Africa. This is the Egyptian paper plant (*Cyperus Papyrus*, or *Papyrus antiquorum*), from which the ancients made their papyrus. It is a noble plant, of a deep rich green, raising its large inflorescences six to eight feet in the air. These are unusual in appearance, and give an aspect of uniqueness to the surroundings. It is not a hardy plant, requiring the protection of a greenhouse during the Winter, and this is its one drawback. It is often desirable to produce an effect of upright lines, and for this purpose nothing is better than the cat-tails, which are so abundant in some of our marshes. Either or both species may be used, the one with the narrow leaves (*Typha angustifolia*) perhaps being more graceful than the broad-leaved form (*Typha latifolia*). For

Tender Night-Flowering *Nymphaea-Bisseti* (New Hybrid)
From Bisset's "Book of Water Gardening."

a decorative plant for the shallow water near the margin of the pond, one should not forget the arrow-heads (*Sagittaria*), of which there are several species available.

With the above plants to select from and such others as individual taste may choose, a varied and effective frame may be made for our water garden. If you wish to introduce something of a tropical effect into the surroundings, use some of the aralias, already referred to, to which add a few specimens of the castor-oil plant (*Ricinus communis*), its star-shaped leaves standing out against the other foliage. If you wish to carry this tropical effect still further, introduce a plant or two of the Abyssinian banana (*Musa Ensete*), a quick grower from seed, with ample broad leaves. The thalias (*Thalia dealbata* and *T. divaricata*) are available also. It is hardly necessary to state that all these plants, with the exception of the aralias, are tender, and need the protection of a greenhouse during the Winter.

The Water Lilies.

So much for the frame or fringe of our water garden. Now, what shall we use in the garden itself? Here we may explore the realms of horticultural knowledge and select some of the choicest plants. Of course, the plants of first interest are the water lilies. The large royal water lilies of South America belong here also, but I will consider them later. The horticulturist's art has supplied many superb things by the careful perpetuation of occasional strains or by the creation of new ones through the medium of hybridization. I shall consider first only the hardy sorts, leaving the more tender kinds for consideration when I treat of the royal water lilies (*Victoria*), which require a similar treatment. Among the white-flowered forms, there is nothing more dainty or attractive than our own native pond lily or water lily (*Castalia odorata*), that graceful frequenter of our lakes and ponds or slowly moving streams. Its delicious fragrance and dainty form place it in the foremost rank. The tuberous water lily (*Castalia tuberosa*), also a superb white, but lacking the delicious perfume of the other, is a welcome addition. The collection is not complete without the little pygmy water lily (*Castalia tetragona*, or *C. pygmaea*), the smallest of its kind, with white flowers sometimes under two inches in diameter. In native hardy yellow lilies, we have the Florida plant (*Castalia flava*), unfortunately a shy bloomer, and less desirable for that reason; and the

Mexican lily (*Castalia mexicana*), a native of Mexico and western Texas, more desirable as it is equally hardy and blooms freely. The only pink lily we have native is a form of our common pond lily, known as the pink or Cape Cod water lily (*Castalia odorata rosea*). This differs from the white form only in its pink flowers.

Marliac's Productions.

When we approach those produced artificially we have a larger selection. And here the productions of that wizard of hardy water lilies, M. Latour-Marliac, a Frenchman, stand without rival. He astounded the world of horticulture between 1885 and 1890 with his creations, and since then has been making almost annual additions to his achievements. He guarded so well the secrets of parentage of his hybrids that little is definitely known about them. His yellows were perhaps derived from *Castalia mexicana*; his pinks from *Castalia odorata rosea*; those with red at the center from *Castalia alba rubra*, of northern Europe; *Castalia tetragona* was certainly one of the parents of one, his dwarf yellow, *Castalia helvola*; while *Castalia odorata* must certainly enter into the problem. With these factors he has produced combinations and effects of color which have wonderfully broadened the field of use of these flowers in water gardens. All of the many beautiful things created by this genius cannot here be enumerated, but only a few of the choicest. Standing in the front rank in *Castalia Mariacea chromatella*, one of his first introductions, and perhaps the most popular of all. It is perfectly hardy, a vigorous grower, and a free bloomer; its charming yellow flowers, always a delight, resemble in form those of our own native white lily. Yellow lilies are scarce, and this is a gem among them. It was introduced about 1888 and was said by its creator to be a hybrid of *Castalia alba* and *C. mexicana*. Another desirable yellow is *Castalia helvola*, also said to have *C. mexicana* blood in it, the other parent being *Castalia tetragona*, the pygmy lily. Certainly it has the yellow color and spotted leaves of the former, and is intermediate in size between the two. It is well worth growing.

About 1889 Marliac introduced two pink forms, said to be hybrids between *Castalia alba* and *C. odorata rosea*. These are *Castalia Mariacea carnea*, and *C. Mariacea rosea*. They are very close, differing only in the deeper color of the variety *rosea*, which is the preferable form.

With *Castalia alba rubra* apparently as one of the parents, Marliac produced a number of surprising forms, all being permeated to a greater or less degree with the deep color of the parent referred to above. The most pronounced of all of these in the depth of color is *Castalia Wm. Falconer*, of a deep rich claret, a lily which should grace all collections. Near to this in color is *Castalia James Brydon*. Those in which another element becomes prominent, introduced perhaps by *Castalia mexicana*, have the center of the flower a deep red, with the ends of the petals yellow. *Castalia Seignouretti*, *C. aurora*, and *C. gloriosa* are of this kind, and are revelations among the water lilies. There are other hybrids to be had, differing in color and markings, so that individual tastes may be consulted.

Among the white-flowered lilies, next to *Castalia odorata*, is *C. alba candidissima*, said to be a hybrid of *C. candida* and *C. alba*, of Greece. It is a vigorous grower, and must be held in check or it will run wild. Another desirable white-flowered lily is *Castalia Gladstoniana*, with large flowers, said to be a variant from *Castalia alba*, and introduced by Mr. Richardson, of Ohio.

Tender Night-Flowering *Nymphaea-O'Marana*
From Bisset's "Book of Water Gardening."

Some Fine Dahlias.

Edwin S. Mannel, Newport, R. I., makes a specialty of dahlias, being particularly strong on the newest European sorts. The accompanying illustrations, from photographs kindly furnished by him, represent some of the best kinds he is cultivating, which he considers a little in advance of those generally catalogued. His comments on the varieties illustrated follow:

Memoire Margeritæ; a French dahlia of the decorative cactus type, producing flowers 7 to 8 inches across, of the very darkest maroon; a dahlia on account of its immense size, and deep color that attracts attention wherever shown.

made more famous by the veteran singer and actor, George Frothingham, who sang the part 30 years in the opera of the same name.

Hollandia; one of the best of the new type of the peony-flowered dahlias, and one that has been greatly admired the past season. For cutting, this variety is unsurpassed, and although the flowers are of the largest size they are produced on long, stiff stems. Color, rosy lilac.

Venezia is an Italian dahlia that attracts a great deal of attention on account of its ragged appearance, which closely resembles that of Progenitor; and while it would not appeal to a florist who wants his flowers for

one that should be in every collection. Color, delicate salmon on a pale yellow ground.

Vineta is an Italian novelty for 1907, and may be rightly called an enlarged "Boinemann's Liebling," although this variety produces flowers with good full centers, a quality that is entirely lacking in the other variety named. It produces beautiful rose colored flowers with white center.

CLUB AND SOCIETY DOINGS.

ELBERON (N. J.) HORTICULTURAL SOCIETY.—This society resumed its Winter sessions on October 7,

Le Coloise
Pink Pearl
Friar Tuck

Hollandia
Mrs. H. L. Bronson
Memoire Margeritæ

Venezia
J. B. Bryant
Mme. Henri Ayeux

MANUEL'S NEW DAHLIAS

Pink Pearl; an English variety, of recent introduction, that is bound to surpass either Kriemhilde or Victor Von Scheffell; at the Newport (R. I.) Horticultural show the gardeners all predicted a great demand for it for cutting and making up. The color is a rich pink, the florets in the center and the extreme tips of those at the back being white.

J. B. Bryant; another English variety of 1904, and one that is very noticeable on account of its size, producing flowers 5 to 6 inches across without disbudding. The color is golden yellow, pale at the tips, sometimes tipped fawn.

Le Coloise; a French decorative dahlia that produces flowers 8 to 9 inches across, and every flower perfect; color, a dull salmon red.

Friar Tuck.—This dahlia is a sport from Le Siam, and like its parent it resembles the Grand Duke Alexis, except in color, which is a shining dark brown. It was because of the color that I gave it the name of Friar Tuck, a name famous in the story of Robin Hood, and

cutting, it would be a fine addition to any collection where a person is looking for novelties. Color, dark carmine.

Madame Henri Ayeux; a French novelty for 1907, and undoubtedly the finest in cultivation; a flower of the largest size, with numberless florets like needles. Color, a beautiful shining rose, while each floret is distinctly tipped white. I agree with the introducer, that it is a dahlia of premier merit.

Torpillo is a French decorative dahlia, that is distinct from all others of this class, as it has long tubular florets, which are white, spotted and striped currant red, while the reverse of the floret is violet.

Sicilia is another Italian variety of exceptional beauty, and of the finest cactus form. Color, pure rose, just a trifle lighter at the base of the florets. The best dahlia of this color to date.

Mrs. H. L. Bronson is an English variety that ranks among the best of recent introductions, and rightly so, for it is a free blooming dahlia of the finest form, and

when the following officers were elected for the ensuing year: President, Henry Wood; vice-president, Anthony Bauer; secretary, George Masson; assistant secretary, Adam Worth; treasurer, James Kennedy.

The society held a dahlia show on October 14. For best exhibit in vases James Dowlen, Seabright, was first; best collection, E. O. Ronrke, first. Vase of dahlias arranged for effect, A. Bauer. Vase of cosmos arranged for effect, James Kennedy. Best collection of vegetables, Peter Murray. Other exhibitors were W. Robertson, B. Wyckhoff, H. Wood, and J. Goodwin.

The next meeting will be held on November 4, when the newly elected officers will be installed.

GEORGE MASSON, secretary.

The agricultural college at Tokyo has been experimenting for some time past with "sasa," or bamboo grass, and the possibilities of making paper pulp from it. It is now reported that unexpected success has been met with, which is very important for Japan, considering the great abundance all over the Empire of this bamboo grass.

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail florist firms advertising under this heading will accept and fill orders for flowers and floral designs forwarded them by mail, telegraph or telephone, the usual commission of 25 per cent. being allowed.

\$25.00, payable quarterly in advance, will entitle the advertiser to a four-line card, under this heading, for one year, 52 insertions. For every line additional to four, \$5.00 will be charged. Four lines will average 32 words; each additional line, 9 words. Each advertiser receives one copy, free, of our Florists' Telegraph Code.

New York.

YOUNG & NUGENT, 42 West 28th St. We are in the theatre district and also have exceptional facilities for delivering flowers on outgoing steamers. Wire us your orders; they will receive prompt and careful attention.

MYER, 611 Madison Ave. My facilities for delivering flowers for any and all occasions are unexcelled. Can give prompt service to steamer and theatre trade. Telegraphic orders solicited. Telephone, 5297 Plaza.

Kansas City, Mo.

SAMUEL MURRAY, 1017 Broadway. I will deliver orders for flowers in Kansas City and vicinity promptly. A first-class stock of seasonable varieties of flowers always on hand. Wire me your orders.

Detroit, Mich.

JOHN BREITMEYER'S SONS, Broadway and Gratiot Avenue. We cover all Michigan points and large sections of Ohio, Indiana and Canada. Retail orders placed with us will receive careful attention.

Denver, Colo.

THE PARK FLORAL CO., 1708 Broadway, J. A. Valentine, Pres. Orders by wire or mail carefully filled; usual discounts allowed. Colorado, Utah, Western Nebraska and Wyoming points reached by express.

Cincinnati, O.

HARDESTY & CO., 150 East Fourth, sell the best grade of flowers grown. Retail orders from distant points for delivery in Cincinnati or surrounding territory will receive prompt attention. Telegraph us.

Dayton, O.

W. G. MATTHEWS, FLORIST, 18 West Third Street. Flowers in any arrangement for all occasions for Dayton and vicinity. Personal attention given to all orders. Long distance telephones.

Dallas, Texas.

LANG, THE FLOEIST, the largest flower store in the South. Floral designs and all flowers in season; personal supervision and prompt service in Oklahoma, Texas, Louisiana. Mail and telegraphic orders solicited.

Louisville, Ky.

JACOB SCHULZ, 644 4th Avenue. Personal attention given to out-of-town orders for Louisville and surrounding territory. Have a choice line of seasonable flowers always in stock; delivery facilities perfect.

Indianapolis, Ind.

BEERTERMANN BROS. CO. Our facilities for executing orders in an efficient manner are unexcelled. Our shipping territory includes the surrounding states. High grade flowers; expert workmanship.

Albany, N. Y.

EYRES, 11 North Pearl Street, cut flowers or floral designs delivered to any part of Albany and vicinity on telegraphic order. Personal attention given and satisfaction guaranteed.

Chicago, Ill.

HAUSWIRTH, The Auditorium Florist, 232 Michigan Avenue. The quality of our work is of National repute, and we are prepared to execute commissions in first-class style in Chicago and its environs.

Retailers desiring a share of out of town trade should be represented by a card in this column.

FOR THE RETAILER

For reproduction on this page, we solicit from our readers engaged in the Retail Trade, good, clear photographs of subjects that are of general interest, such as store interiors, designs of different classes, new delivery wagons, etc.

A Retailer's Catechism.

A subscriber living in one of the Jersey towns calls our attention to the fact that, although questions on growing, heating, and other details, connected with the management of a greenhouse plant appear in our columns, with the answers thereto, but seldom are inquiries submitted by retailers asking information concerning their branch of the business. He adds:

Besides our regular and ordinary cheap and medium trade, we are sometimes called upon to furnish our services for more elaborate affairs, and on these occasions we are always anxious for advice and suggestions. Why could not your contributors give us a short catechism on making up of bouquets, etc., just as well as we receive pointers and timely suggestions on growing, describe the arrangements and give an estimate of the quantity of material needed. I think it would be well-directed education. For my part, I will submit some questions, and I have no doubt that other subscribers will follow suit, for why should we be ashamed to learn and strive for betterment?

What is the best and easiest way to make a shower bouquet for a bridesmaid?

What is the proper thing as regards ribbon and tying?

When, for instance, there are four maids should there not be two rights and two lefts?

How many carnations or roses will it take to give a good effect?

What is the proper thing for a maid of honor and matron of honor?

How can coronets or diadems be made gracefully and substantially?

INQUIRER.

We are glad our correspondent has started the ball rolling in this connection, and hope other retailers will follow his example. Only by asking questions can one hope to learn; besides, it is of great service to the conductors of this journal to be informed of the wants of its readers, and a pleasure to supply, so far as we possibly can, all the information that these readers desire to know. So don't be backward in sending in inquiries, for, as our correspondent correctly puts it, "Why should we (you) be ashamed to learn and strive for betterment?"

Mr. Raybun answers the foregoing questions as follows:

—There are many ways of making a shower bouquet, and methods differ in almost every store, for almost every artist has his way of doing things, both in the manner of wiring of the flowers and the building of the bouquet. From general observation I have noticed that the man who uses the least material, such as wire, sticks, and twine, usually secures the best results in the least possible time. The preparation of the flowers to be employed is a matter of vital importance. For the shower bouquet it is necessary to wire them, as a certain amount of rigidity must exist for the support of the shower, otherwise the flowers will be pulled out of place when attaching the ribbon forming the shower. Roses with fairly stiff stems will not require a wire as heavy as roses with weaker stems; and in the case of very firm stems and flowers, wiring at the neck should be dispensed with. But it will be necessary to attach a wire at the bottom, otherwise the handle will become too bulky. Carnations require a fairly heavy wire to keep them from bunching too much. I find number 72 works best. A great many florists adhere to the old method of wiring; to wit, passing the wire entirely through the calyx of the rose or carnation and bending it down. Flowers should be wired as inconspicuously as possible. The best way is to run the wire straight up into the calyx, and to avoid twisting the wire around the stem of the flower any more than is necessary. With lily of the valley, it is only necessary to cut it the required length, and to attach a wire at the ends to form the handle.

After the wiring of the flowers the next thing to be thought of is the green to be used. It is a great mistake to use too much green. I have seen bouquets made with tufts of smilax, to keep the flowers apart, that looked like a head of cabbage with flowers stuck into the top. If you must use green other than adiantum or asparagus, keep it out of sight as much as possible. I find fancy fern answers the purpose best. By stripping off the lower leaves, and keeping it well below the flowers, it will be completely hidden from view. One kind of green is all that should be seen in a bouquet of this kind.

Now that the flowers and green are ready, we have to build the bouquet. The first thing to decide is the

style of bouquet that is required—a round bouquet, half round or Empire. After the style has been decided it must be constantly kept in mind while the work is going on. A good artist will almost complete a bouquet without using the twine. This I would call the easiest and best way to do the work. The flowers are picked up and the green mingled with them, without using twine until the very last. The time saved in not handling the twine will be a considerable item when a large number of bunches are to be made.

After the bunch is completed and finished off with plenty of adiantum or asparagus, and the handle brought down to the required size, it is ready for the shower. This should consist of from twenty to thirty yards of one and a half or number two ribbon or gauze, as the case may require. This is sometimes looped over the flowers, but the quickest method is to loop the ribbon the required length and fasten one end securely with a stout wire, each bolt of ribbon being attached to one wire. Three bolts are generally used, but two will do. These wires are then inserted into the bouquet toward the front and secured at the handle. The ends of the ribbon are then cut into various lengths, and evenly distributed, so that no two ribbons hang together; then tie one or two loose loops or knots in each ribbon. It is best and quickest to tie the loops first, and when they are completed the flowers can be easily attached by passing the stems through the loops and then tightening them by a slight pull, when they will be found to be securely fastened. A very small piece of maiden-hair fern tied in with the flowers gives a pretty effect, especially for lily of the valley, which is most commonly employed for shower bouquets. After the shower is finished, the handle of the bouquet should be wrapped with tinfoil, and then wound with white ribbon, or covered with a "hid handle," which may be obtained from any good florist supply house. To finish the arrangement a broad ribbon should be tied on the handle, in a double bow, and the ends allowed to fall the same length as the shower.

The quantity of flowers used in a shower bouquet is usually governed by the proportions of the bride who is to carry it. An ordinary bouquet of lily of the valley will take about two hundred flowers for the bunch, and from fifty to seventy-five for the shower. Of roses it would take about from two and a half to four dozen, and about two dozen for the shower; but it is advisable and more effective to use a lighter flower for the shower effect. Carnations would be about the same proportion as roses.

A substantial coronet or diadem for the hair should be made on a stiff wire bent the required size. The flowers used should be small and light. Orange blossoms are the most appropriate to use. Lily of the valley, mixed with sweet myrtle, makes up very gracefully, and jasmine is especially good. All heavy flowers, such as roses and carnations, should be avoided.

I do not quite understand what "Inquirer" means by the question, "When, for instance, there are four maids, should there not be two rights, and two lefts?" Bridesmaids follow the bride, in pairs, which would in this case make two right, and left. Their bouquets are carried in the right hand, and, in most cases, allowed to rest on the left arm. This is especially the case with shower bouquets.

The bouquet carried by the maid or matron of honor, as the case may be, is usually made with a flower different from that carried by the bride or bridesmaids. The choice of color is governed by the shade of the gown worn, but should, of course, harmonize with the rest of the bridal outfit. D. RAYBUN.

Retail Notes from Detroit.

It seems that the local population was too much inoculated with the bacillus of Tigeridis baseballoides to pay much attention to business the past week. The local fans wanted yellow chrysanthemums, but that article was very, very scarce.

Wm. B. Brown got the order from the city for a floral tiger which was presented to our baseball team. Wm. Hielscher, the young wire genius, made the frame of the beast, which was in a running position, six feet long, on a rolling platform, 5x9 feet. The face was of papier maché and the neck and body of yellow chrysanthemums, the underside being of white chrysanthemums. The platform on which the design stood was covered with grass on which a baseball diamond was laid out with white sand. The whole work reflected great credit on its creator. Although no price was mentioned, the material and labor used calculate a \$200 job.

A local jewelry firm is hustling the sale of "Swastika," an old Indian cross, the sign of good luck and quite a few have been executed in flowers for store openings in place of the old horseshoe.

Fall weddings are quite plentiful, although nothing very elaborate is in sight. One local firm is known to have five weddings booked for this week, ranging in price between \$75 and \$150 for the decoration part.

Buffalo, N. Y.

News Items.

Miss Laura Rowan, who has been in the employ of W. J. Palmer & Son for the past three years, has left for Seattle, Wash., to spend the Winter. Miss Rowan was given a farewell party by the employees of the firm at the home of W. H. Grever, which was also a house warming for the new home of the latter. Miss Rowan was presented with a handsome sterling silver comb, brush and mirror. Mrs. Grever was also presented with one dozen beautiful sterling silver tea spoons.

Otto Gillis, who has been identified with the florist business in various positions, has been employed by W. J. Palmer & Son to take charge of the office work.

Mr. Lee, of Rachel M. Rebstock's, has left to take a position with a firm in Chicago, Ill.

W. J. Palmer has been confined to his home for the past ten days with a severe attack of bronchitis.

Wm. F. Kasting is making a very thorough canvass for election in this city as city treasurer. As is customary with Mr. Kasting, he is conducting his campaign in a very businesslike manner.

W. A. Adams's political manager says that he has a dead certain thing in the election of his man in their ward.

C. S. Ford, representing A. Herrmann, of New York, was in town, looking up trade in his various lines and reports business fine in the West.

Visitors, C. B. Knickman, of A. T. Boddington, New York, and Mr. Wise, of Erie, Pa., manager of the Erie Floral Company. W. H. G.

Rochester, N. Y.

Trade Notes.

Business here is considerably on the gain among growers and retailers, and this fact has caused a slight advance in the price of marketable material. Chrysanthemums are showing in quantity, the midseason varieties predominating. Not so many Glory of the Pacific or Polly Rose were to be had this year, these kinds having been replaced by newer varieties. Omega apparently being the favorite.

Carnations are good and roses are arriving in better shape, with prices consistent with quality. Roses realize \$4 to \$12 for Bride, Bridesmaid, Killarney, etc., American Beauty ranging from \$12.50 to \$25.

The newer varieties of carnations sell for \$4 per 100, other and common grades at \$1.50 to \$3.

Speaking of roses, the variety Killarney is a general favorite here, and a shipment from A. N. Pierson, Cromwell, Conn., just received is a silent rebuke to those who say this rose cannot be grown successfully.

The violet market here is not as satisfactory as is the case with other flowers, many of the store men buying direct from growers. Shipments for sale on the market, however, show well-grown, clean stock, with plenty of fragrance, and wholesale usually at 50c. per 100. Plenty of Liliums Harrisii and giganteum are to be had, also lily of the valley.

That tastefully decorated windows are attractive is very evident, by the many who stop to look at Salter Brothers' water wheel. With a few rocks and small stream of water, and ferns, orchids and other flowering plants arranged informally, one can obtain a very pleasing effect by taking a little time and using a stock of imagination.

Since the arrival of frost, outside work has advanced, although incessant rains have hampered nurserymen quite a little. Owing to the scarcity of labor some have found it necessary to employ women to do the lighter packing, while boys run out orders by the piece, many of them making good pay by this method.

J. B. Keller Sons are now using their two new King Construction houses and are evidently much pleased with them.

COCKNEY.

MERIDEN, CONN. — Willis L. Smith, nurseryman, died October 16, aged 75 years. He is survived by a widow and one son. Mr. Smith was a native of Wallingford, but lived here the greater part of his life. A year ago Mr. and Mrs. Smith celebrated their golden wedding anniversary.

Indianapolis.

Current Topics.

The Michigan-Wabash football game caused a great many yellow and white chrysanthemums, also red carnations, to be worn in honor of the occasion. The college colors were prevalent in the florists' shop windows.

Several changes are noticeable at Tomlinson Hall Market. Baur & Smith have engaged a new stand; Mrs. Hepler has possession of the old one. Chrysanthemums glory there, and the effect is pleasing.

Bertermann Brothers Company have announced their customary Fall opening to be held about the middle of November. Edward Bertermann, manager, has great pride in perfecting the coming event.

The premium list for the Fall exhibit of the State Florists' Association has been prepared. Herman Junge, president of the association, is attending to the details.

Several of the craft have announced their intention of visiting the Chicago exhibition in November.

The Park Board is making unusual preparations for next season and an active campaign for heavier appropriations in all departments is being waged.

A new conservatory is to be erected at Winona Lake for the agricultural class.

Charles Vollrath and Miss Florence Froshauer were married October 16, at the bride's home. Mr. and Mrs. Vollrath are very popular and their many friends offer best wishes. I. B.

Pittsburg.

Trade Notes.

There are more chrysanthemum displays in the city this Fall than we ever have had. Besides the big show in Schenley Park, in the Phipps conservatories, which will be ready in about ten days, there are now open to the public three of our finest private conservatories—those of H. C. Frick, A. Peacock and H. J. Heinze—and the displays in each of them are worthy of a visit. About 2,000 blooms are seen at Frick's place, where David Fraser is in charge. Some good English introductions, also Australian and Japanese, are seen. Among the best are Beatrice May, white; Princess, Brighthurst, also white; Mrs. A. T. Miller, Mademoiselle Ogiz, a purple named after the governess in the Frick home and exhibited the first time last year in Chicago. At Heinze's conservatories, where E. S. James is gardener, over 2,000 blooms are on exhibition. There are about three dozen varieties of chrysanthemums, besides a fine collection of other blooming plants. At the Phipps conservatories, Schenley Park, J. W. Jones, foreman, has a force of men at work, preparing for the big show, which will be ready about November 1. Some 13,000 chrysanthemums will be exhibited here this Fall, over half of them in bloom at one time. About a dozen new varieties will be seen during the season. The Allegheny Park conservatories will also have a fine display, which is always well patronized as it is easily reached by many people of both cities.

De Forest Ludwig, eldest son of E. C. Ludwig, the Allegheny market florist, is on his way to California, where he expects to remain until next Spring.

W. C. Beckert, seedsman, is receiving a fine grade of bulbs.

John Bader is doing a nice plant trade; ferns particularly, of which he has a fine stock, are selling well.

E. C. REINEMAN.

Gloversville, N. Y.

The Gloversville florists report a healthy condition of trade. While there has been no new building all are satisfied with the existing conditions as well as business prospects.

George Main does considerable work in landscape and outdoor planting of all kinds. He makes frequent rounds of the near-by places, so as to keep in touch with all New York. Mr. Main finds this a profitable part of his business, and has an automobile in which he goes to and from all such work as is in his charge.

Main & Fear do a strictly greenhouse business in plants, cut flowers and designs.

E. T. Denham reports good business and stock in a satisfactory condition for Winter trade. J. M.

Utica, N. Y.

Trade and News Notes.

Trade has increased very much the past week or since the first of October. Carnations are not overplentiful and are very good for this time of year. Roses are improving. Chrysanthemums are coming in slowly, but this week will bring plenty of them. Violets are improving every day; they are extra good for this time of year and sell well.

Frank McGowan, 328 Sunset avenue, has his two new houses about completed, but he says when he builds more he will commence the work about January as he has been delayed very much in getting his material, which has set him back considerably. The new houses are to be planted to sweet peas this week. He has a fine house of Robert Malliday chrysanthemums; in fact all of his chrysanthemums are good. Carnations here are a little late, but are of good quality; he intends to plant a large lot of bulbs of all kinds.

J. C. Bigelow & Son's place looks well; they have a nice lot of carnations and other stock.

Wm. P. Pfifer grows carnations mostly, and they are in fine shape. He is cutting some Boston Market; it is a good white as seen here.

Chas. F. Seitzer has, I think, perhaps about the best carnations now being cut in Utica. Enchantress and Rose Pink are A No. 1. He also has a fine house of new roses planted this season.

Robert Boyce's place is in fine shape. He was the first to cut chrysanthemums here which found a ready sale.

Brant Brothers are cutting a good lot of roses at the present time and find a ready sale for the flowers.

Peter Crowe has finished rebuilding three houses and all are planted to Adiantum Croweanum. He has now probably the largest plant in the country devoted to ferns alone and says he cannot fill his orders at that.

Wm. Hermant has completed his large house of the Lord & Burnham construction.

L. F. Goodwin of Clarks Mills, has three fine houses of carnations and one house of Boston ferns that are grand fine plants in 6-in. pots.

Dr. W. A. Rowlands has just finished a large house which he intends to use for stock and in the Spring fill with geraniums and next year carnations. Then his six houses will all be in carnations. He has a good grower who came here from the Dale Estate recently—Mr. Watkins.

H. G. Martin has two fine houses of Asparagus plumosus planted this Summer.

Eddie Crowe, nephew of Peter Crowe, and the gardener and florist at the House of Good Shepherd, was married in September. Among the many presents he received was a fine building lot from his Uncle Peter, and he intends to build a fine house at once.

J. C. Bigelow, Jr., of the firm of Bigelow & Son, was married last week in Whitesboro, N. Y., and intends to live near his father's home on Sunset avenue.

Miss Irena M. Spencer, daughter of J. C. Spencer, was married on September 14 to W. H. Alexander of New York. The young couple are now living at Mount Vernon, N. Y.

Mrs. E. E. Quinn, wife of Florist Quinn of Norwich, is at St. Elizabeth's Hospital in Utica, but is improving. All hope for a speedy recovery. Mr. Quinn was in town the past week and called on some of the florists. He sent in a bunch of roses to Spencer & Martin that would be very hard to beat.

A. O. Grassl, Barneveld, N. Y., called on the trade a few days ago; he was on his way to Syracuse where his wife is very sick. Mrs. Grassl has the sympathy of all the florists in Utica, as she is well known here. Mr. Grassl says that his Apple Blossom carnation is a sight to see, better than ever.

Jack Cokley of the Scranton Supply Company of Scranton, Pa., was in town on October 10. He reports trade active and left with quite a bunch of orders.

S. S. Skidelsky called on the trade on October 9; he also reported trade good and left for Watertown, Syracuse and the West.

S. D. Green, of H. Bayersdorfer & Company, Philadelphia, was in town the fore part of the week on his way home from a long trip; he says trade has been good.

T. W. Bannister of H. D. Mann & Company, Syracuse, florists' supplies, has also been here; he says they have six men on the road.

Simon Theise of Fred Theise Manufacturing Company, makers of willow furniture and florists' baskets, 151 Fulton street, Boston, called on the trade this week. Wm. Bodenbrown, representing John C. Meyer & Co., Boston, Mass., was also a caller.

Club News.

For over a year the Utica Florists' Club has been meeting at the different members' homes. We have a large number of members in the surrounding towns near Utica and find it very pleasant and always have well attended meetings. On October 10 the club met with John Humphrey of Rome, N. Y. About 35 members went from the city and one of the most enjoyable times we have ever had resulted. One new member was elected and applications received for four more. We have now members from Syracuse to Albany, which takes in almost all the Mohawk Valley. Last year we held in November a club flower show and banquet for the ladies; it was so well liked that we have decided to repeat it in November, date not yet decided. Each member is allowed to invite a lady or two, or a gentleman and lady friend. Tickets can be procured of the secretary. The tickets will be limited to the size of the hall. We expect it will be the banner meeting. One of the best caterers has been engaged. Every member is asked to bring something in flowers to help swell the exhibition, and we are expecting some new things in chrysanthemums, roses and carnations. Let the secretary know as soon as possible how many tickets you will need. QUIZ.

Troy, N. Y.

James G. Barnett on Burdette avenue was busy putting his greenhouses in condition to go through the Winter. A new boiler was being placed, an attractive show room was nearing completion and a new office building also about ready for occupancy. The frame residence adjoining the greenhouses in which Mr. Barnett and family had lived for many years has been moved to a vacant lot across the street. Where the frame residence stood there is now in the course of construction a brick residence with all modern improvements. This Mr. Barnett hopes to be able to occupy before snow flies. The Barnett greenhouses are always attractive and trade in Fall goods is reported good.

Sambrook Brothers report a good steady business, with nothing new to relate. Their chrysanthemums were coming in well, and the firm was in anticipation of a lively Fall trade.

Josiah Young, seedsman and florist, will in future take the place of simply Josiah Young, seedsman. The recent purchase of the W. C. Goodrich greenhouses at Watervliet only a few miles from Troy—will give Mr. Young ample facilities for combining the florist line with his already well and favorably known seed business. When this property was secured it was in bad shape and has taken considerable time and money to get it into running order. Painting, glazing and work on new boilers and heating apparatus make a force of men busy. A handsome new residence of concrete has been built close to the greenhouses; this Mr. Young will occupy himself in a short time. Besides the greenhouses, there are several acres of land that will be used for the raising of perennials and hardy ornamental stock. The place at present consists of about 25,000 feet of glass under which a varied stock of plants is grown. While carnations are grown well, considerable space will be given to the production of Summer bedding plants that will be handled in connection with the seed trade. The greenhouses are located on the Schenectady trolley line and are in charge of P. K. Knott, a man of considerable experience in the seed and plant business. Hollow fire-proofing brick has been used in the construction of some of the walls of the new greenhouses. A large root cellar for bulbs and tubers of all kinds was nearing completion. A considerable portion of the Young Seed Store on Franklin square will hereafter be devoted to cut flowers and the varied products of the new greenhouses. J. M.

New York.

News of the Week.

The retail business is exceedingly quiet just now from some cause or other. Whether it is that the weather is too fine or on account of the increased price of every commodity, making it so expensive to live in this city, we cannot tell; certain it is just now that there is very little doing in retail lines.

Among the new things that Reed & Keller are getting out is noticeable the skin of the armadillo. This animal's skin is cured, fixed with the tail forming a handle by being fastened to the head, making a basket with handle complete, and suitable either for flowers or for small plants. It certainly makes a novel basket; and besides its utility as a receptacle for flowers or plants, it is a good specimen of the taxidermist's art. Its cost, however, will no doubt limit it to the higher class of flower stores. This firm is also finding a great demand for its green Russian-ware plant stands and pleated birch-bark baskets. The catalogue shortly to be mailed by this concern is replete with descriptions of all the requisites necessary for the retail florist business, and with the exception of two or three items, everything catalogued is of its own manufacture.

The Knickerbocker Hotel, corner Forty-second street and Broadway, was opened a year ago Thursday. The anniversary was celebrated in various ways, and the florist of the hotel, James Micklejohn, made elaborate and extensive decorations all throughout the house on that day in honor of the event.

Among the better grades of chrysanthemums coming in just now are such varieties as Omega, Rosiere, Mrs. Henry Robinson, Clementine, Tonsen, Meta, Colonel D. Appleton, Mrs. Coombs, Dr. Enguehard, Beatrice May, Cheltoni, W. Duckham and Mrs. W. Duckham. Some flowers of a large yellow variety submitted by Charles H. Totty to the Chrysanthemum Society's committee of New York last Saturday were afterward sold to a Broadway florist for \$1 each.

The chrysanthemum exhibition of the Morris County Florists and Gardeners' Society will be held next Thursday and Friday, October 31 and November 1, at Madison, N. J. The exhibition of the American Institute takes place on November 6 and 8, the Tarrytown exhibition being held on the same dates.

The marriage of Julius Roehrs, Jr., to Miss Koch took place at the home of the bride, Clarkson street, Flatbush, Brooklyn, on Wednesday evening, October 23. The newly married pair is well known to the trade of both New York and New Jersey, and the wedding was quite an event in floral circles.

J. W. Stern, 1 Dey street, Jersey City, N. J., is no longer agent for L. Van Steenkiste nurseryman, Ghent, Belgium. We are glad to report that W. F. Sheridan was discharged from the hospital on Monday and removed to his home, where he is convalescing very comfortably, and a rapid and full recovery is assured.

Patrick Langton, father of Thomas E. Langton, florist, Flatbush avenue, died at his home in that Borough on Tuesday of last week, and was buried on Thursday in Holy Cross Cemetery. He was 79 years of age, a native of Ireland, and had been a resident of the Greenwood district of Brooklyn for 57 years. In his early life he was engaged in the making of street railways, subsequently entering the coal and ice business. He was twice married, both of his wives having predeceased him. Mr. Langton was of a genial, generous disposition and greatly esteemed in the locality in which he lived. Three sons survive him.

Cleary's Horticultural Company has been incorporated with a capital of \$10,000, to do business as horticulturists, fruiterers and dealers in plants. The incorporators are Ambrose T. Cleary, Haverstraw, N. Y.; George Meehan, Jersey City, N. J.; Charles F. Smith, 60 Fourth place, Brooklyn.

Arthur T. Boddington, attended the chrysanthemum show at Lenox, Mass., which opened on Wednesday, October 23.

Visitors in town: John Walker, Youngstown, Ohio; A. N. Pierson, Cromwell, Conn.; J. Boiland, St. Johnsbury, Vt.; and C. Waterer, rhododendron grower from England.

Boston

News Notes.

The coming chrysanthemum show of the Massachusetts Horticultural Society, on November 8, 9 and 10, promises to be up to the usual high standard of a Boston chrysanthemum exhibition. Many entries are being made and the attraction of the numerous special prizes offered this season will make the show very interesting. The special prizes offered for flowers are: for the best arranged table of cut chrysanthemum blooms, all classes, tables to be 8x6 feet, for commercial growers only—\$40, \$30, \$20, \$10. For the best decorative arrangement of cut chrysanthemums with Autumn foliage or other suitable material, table 8x6 feet, all classes, for retail store florists only—\$40, \$30, \$20, \$10. For the best vase of 100 chrysanthemum blooms, tasteful arrangement to be considered, prizes offered by G. R. White—\$40, \$30, \$20, \$10. For the best vase of 50 roses of any one variety, first prize by Francis Skinner—\$50, \$30, \$20. For the best six vases of carnations, distinct varieties, 50 blooms each—\$40, \$30, \$20, \$10. For the best centerpiece of growing plants suitable for table of eight covers, Gardeners and Florists' Club prizes—\$12, \$8, \$5. Other special prizes include the R. & J. Farquhar & Company silver cup, valued at \$75, for the best collection of vegetables, for private gardeners only, and prizes for the most tastefully decorated table of fruits. Full information may be had from the secretary, W. P. Rich, 300 Massachusetts avenue.

H. M. Robinson & Company will hold open house on the evening of the 29th inst., and invite all their customers and friends to call in and see them.

W. P. Rich, secretary of the Massachusetts Horticultural Society, attended the annual meeting of the New Hampshire Horticultural Society at Exeter last week. Wilfred Wheeler, Concord, also attended and read a paper on "Strawberry Cultivation."

Charles Boyle has again entered the employ of Thomas Galvin at the Back Bay store.

Chris. Donovan is again with Welch Brothers.

Visitors the past week included Gomer Waterer of Ragshot and T. W. S. Balfour of London, England.

The high grade American Beauty grown by Jurgens, Newport, R. I., are still seen in quantities at Welch Brothers.

J. W. D.

Baltimore.

Home Coming Week.

Our home coming week with its attendant festivities has been a great success. The weather during the entire week was ideal. Both the decorations and illuminations of the city were superb; and our local florists have done a good business. The military, municipal and fraternal society parades, together with the electrical pageant, were unique and beautiful; and the great carnival parade of Friday night was a hilarious success. Among the 70 floats there were many very artistic and costly ones. The park department had three floats showing a park picnic, children's play-grounds and an outdoor gymnasium with its apparatus. All of these were loaded down with merry children. Natural trees and flowers were used in making up as realistic a reproduction as was possible. General superintendent W. S. Manning originated the idea.

The dahlias of the Vincent farms played a conspicuous part on a number of floats, thanks to Jack Frost, who was so kind as to stay away long enough so as not to destroy the flowers altogether. The Messrs. Vincent donated a large number of flowers.

News Notes.

Several park districts are making preparations for free chrysanthemum shows to the public.

The home coming week ceremonies ended on Saturday at Annapolis with the unveiling of tablets on historic trees, commemorating "Peggy Stewart Day." A football game between the future Admirals of the Navy vs. the Harvard University eleven also drew many thousand persons. The old Liberty Tree, with its tablet, is on the campus of old St. John's College; also an elm seedling from the famous Liberty Tree at Cambridge, Mass., played a conspicuous part in the day's ceremonies. C. L. S.

1657 Buckingham Place,

P. O. Box 43

Philadelphia.

Trade Notes.

While there have been several frosts in this section, in some places more severe than others, the one on Monday night was decisive, the thermometer going to 24 degrees, and from present accounts this has been very general, so that outdoor flowers are now done for.

A. J. Pennock, Lansdowne, Pa., is sending in flowers of a new variety of lily of the valley. The bells are larger than those of the old type and apparently droop a little more; they also appear to finish well together, being open up to the top of the spray. The retail stores like this new variety very much.

William K. Harris, who many years ago introduced the Ivory chrysanthemum, still grows this variety in quantity; some were seen on Tuesday from his establishment, perfect flowers with 40-inch stems.

Samuel S. Pennock arrived home on Monday from his European trip. Among other places he visited the nurseries of Alexander Dickson & Sons, Newtonards, Belfast, Ireland, and was much impressed with their roses.

John Walker, Youngstown, O., was in town, the end of last week, on a short business trip.

The Henry F. Michell Company are doing a very large bulb business, far ahead of last year's.

Bayersdorfer & Company are very busy; orders continue to pour in, compelling the packing department to work overtime. DAVID RUST.

Violets

Large field grown clumps Lady Campbell, \$1.00 per 100; \$35.00 per 1,000; out of 2½ in., \$2.00 per 100, \$15.00 per 1,000.

Carnation Plants, Joost, Marion and Mey Taylor, fine field plants. \$3.00 per 100, \$25.00 per 1,000.

Phone Nos. 4463, 4464 Madison Square

THE WEEK'S WORK.

Evergreens for Indoor Work.

The work of selecting and even potting up of the evergreens needed for sale in pots and tubs during the Winter should not be put off to the last moment. In the last two or three years there has been a noticeable increase in the demand for such hardy or comparatively hardy material for endless purposes. Unlike many other things which have to be given much attention before the time for disposing of them arrives, evergreens require very little preparatory work, and they have the other great consideration in their favor of not spoiling in the slightest, if it should turn out that the demand was so light that they remained unsold. They would be as serviceable for other purposes as if they had not been disturbed, or at least nearly so; the only labor lost would be that necessary for digging and potting or tubbing together, of course, with the little care required in keeping them in the interval of waiting.

Palms.

Kentias will stand what may be termed a cool temperature and grow well, too. They will not suffer in the slightest degree if the temperature falls to 50 degrees if the temperature of the house or houses in which they are grown is kept always moderately low uniformly, but if the plants are grown hot sudden coolings will damage them.

Old or well-established plants in pots stand a cool temperature much better than young plants. The latter will live in as low a temperature as the former, but mere existence is not satisfying, especially in the case of young palms. They have to be kept growing in order to make them profitable; and again, the young palms suffer in the way of color very perceptibly when they are subjected to a low temperature. Kentias all through do with less fire heat, or, in other words, thrive in a lower temperature than arecas, and for that reason arecas should be kept growing in a somewhat higher temperature during the Winter. If arecas are kept in a too cool temperature now they may get checked

to such an extent that they will make little or no growth until Spring, which means a considerable loss in a few months' time.

Only very little shade is needed on palm houses now and that little should be confined to areas of glass exposed to the south or west. Hard syringing is very effectual in keeping palms free of troublesome insects; on the other hand, gentle spraying with that object in view is worse than waste of time and water. In syringing, it should always be kept in mind that when force is used in the application of water the force accomplishes more than the water, although, of course, the one is inseparable from the other in the work.

Although, as in the previous two or three Summer seasons, kentias were relatively in greater demand than arecas, there promises to be a good market for all the available arecas during the coming Winter. Kentias stand much better than arecas when placed in situations where they are only partially protected from wind and sun. In Winter palms are used exclusively indoors and a great many are employed for purposes such as make the use of small and medium size arecas imperative. Made-up plants of arecas look much more natural than like arrangements of any variety of kentia, although of late years the practice of placing three kentias in a pot has grown so that there is a considerable demand for such.

Cocos Weddeliana.

No matter what may come or what may go, cocos will always hold its own in the estimation of the retail florist. There is nothing to equal it for many purposes, and although the profit made from growing it and selling it in a small state is in no way alarmingly great, still the absolute certainty of there being a ready sale for all that can be grown is in itself quite a consideration, and along with that the assurance that a good price always awaits the grower who is able to produce fairly large specimens without the loss of any leaves during their period of development. It must, after all, be confessed, however, that to the average grower there is more in the sale of cocos in its small state than

he could reasonably expect to get in return for all the care necessary to produce large specimens. Notwithstanding an occasional testimony to the contrary, it is the safer policy in growing Cocos Weddeliana to keep them in Winter in a temperature a few degrees warmer than that which has by actual experience been found to suit the requirements of *Areca lutescens*.

Phoenix Roebeleni.

The more I see of *Phoenix Roebeleni*, the better I like it. This variety of phoenix has many commendable qualities for the commercial grower as well as the retail florist; it has, for instance, the hardiness and durability characteristic of all the phoenix, with a grace of habit possessed by none of them and excelled by few others.

Ferns.

Plants of the Boston fern in its many forms grown right along in pots, and that have been for some time in the pots or pans in which they are to remain until sold, need abundance of water. These ferns, when they have filled their receptacles absolutely with roots, dry out very quickly and neglect to water them for any great length of time will be hurtful to them in the extreme. Plants lately potted from bench-grown stock need just as much care in the matter of watering as the others, with this difference, that harm is more likely to come to plants newly potted from benches through overwatering than because of an insufficient supply. Considering which, it will be advisable to examine the plants well before watering.

Crotons.

Crotons will stand all the sunshine available now. When these plants are kept in a growing condition as to temperature and when their pots are well filled with roots, an occasional watering with liquid manure will be helpful; but when the pots, or the soil which they contain, are not yet filled with the roots of the plants because they have not yet had reasonable time to push through, or for some other and more serious cause, like that of some functional defect, there will be nothing gained but more than likely much lost by feeding with manure water.

Miscellaneous Decorative Plants for the Holiday Trade.

Now is the time to gather up and prepare for use, all the odds and ends which may be scattered in all directions. Under this heading may come such plants as marantas in variety, peperomias, selaginellas, and many others. Even if these during the rush incident to close attention to the needs of more staple things, suffered to some extent they can, by careful nursing, be brought into fairly presentable condition yet, before the demand for such amounts to a great deal. Many of these plants, such as the marantas, make beautiful specimens without the aid of any auxiliary, and when their one-sided or other conditions render them undesirable for offering as such, they will still be found immensely helpful in the way of variety in the making of baskets and pans at Christmas and other times.

The many varieties of selaginellas are likewise well adapted for such work, and are, if anything, more convenient and pliable when such arrangements are in the act of construction—a fact that means a great deal on such occasions. There are again some varieties of selaginellas that look admirably well, and what is infinitely more to the point, sell well at Christmas, made up exclusively by themselves. Probably the best variety for this purpose is *S. Watsoni*, which is somewhat stiff and erect in habit, but feathery enough when three or more are placed in one shallow pan to give the appearance of one luxuriant specimen. This variety has also the distinctive quality of sufficient variegation on the tips to add unusual brightness to this class of plants.

Ivy Plants.

Sometimes it becomes necessary, for one reason or another, to take up large plants of English ivy for the Winter, and although these may get along fairly well in some frost-proof shed or cellar during the Winter they will do much better if kept in a greenhouse in a temperature the same as is required for roses or carnations. Kept thus, they will not lose any of their leaves, neither will any of them get scorched when so housed or after they are planted in the open again in early Summer.

Prices Advertised in these Columns are for THE TRADE ONLY—When Writing Please Mention THE FLORISTS' EXCHANGE.

CLASSIFIED ADVERTISEMENTS

Cash with order.

The columns under this heading are reserved for advertisements of Stock for Sale, Stock Wanted, Help Wanted, Situations Wanted or other Wants; also of Greenhouse, Land, Second-Hand Materials, etc., For Sale or Rent.

Our charge is 10 cts. per line (7 words to the line), set solid, without display. No advt. accepted for less than thirty cents.

Display advertisements in these columns, 15 cents per line; count 12 lines agate to the inch.

[If replies to Help Wanted, Situation Wanted, or other advertisements are to be addressed care of this office, advertisers add 10 cents to cover expense of forwarding.]

Copy must reach New York office 12 o'clock Wednesday to secure insertion in issue of following Saturday.

Advertisers in the Western States desiring to advertise under initials, may save time by having their answer directed care our Chicago office at 127 E. Berwyn Ave.

METROPOLITAN MATERIAL CO.

Greenhouse Wreckers
1398-1408 Metropolitan Avenue, BROOKLYN, N. Y.

Glens Falls, N. Y.

The new rose houses built the past Summer by H. L. Crandell are now looking well. Considering that the roses were not planted until late in the season they promise well for a good Winter's supply. The Crandell greenhouses are well kept up; healthy stock and a tidy appearance make business at all times good.

A. J. Binley has added a small house for Easter plants as well as given his entire place a general overhauling. Mr. Binley is entirely satisfied with his business results, so much so that he improves and extends a little each season.

The greenhouses of Dr. Little have all been rebuilt the past Summer. The entire place looks new. The roses and carnations in the new houses promise well for the coming season's supply. Henry Pellett manages the commercial end of the business for the doctor and reports trade good. There is quite a collection of orchids at this place that are now getting fairly established and will bloom some the coming Winter; cattleyas, dendrobiums, oncidiums, cecylogyns and cyripediums seem to be most generally grown. J. M.

St. Louis, Mo.

News Notes.

The Engelmann Botanical Club held its first meeting since June on Monday night, October 14, in the large rooms of the Central High School, on Grand avenue. Charles H. Thompson, of Shaw's Garden, occupied the chair. The meeting opened at 8 p. m. with a large attendance. C. Kellogg, a botanist of East St. Louis, Ill., was the first speaker called upon, and gave the members a general talk on botany. Chas. Pulgraf, of Shaw's Garden, then gave a lecture on the fumigation of plants, which was listened to with great interest. A number of students accompanied Superintendent H. C. Irish to the meeting. The club will hold from now on regular monthly meetings in the High School building.

A visit to Henry Felter's place on Lexington avenue was well repaid, as everything is in fine shape, especially his chrysanthemum plants, which could not be improved upon. The trade buys largely at this place.

W. C. Young, president of the St. Louis Florists' Club, took a day off last week to work in the interest of the club. The other officers are also out hustling.

Miss Emma J. Kuentzler, who has been with Miss Theresa Badaracco for the past three years, was married the past week to John S. Schmidt. She has given up her position and will be at home to her friends at 1009 Geyer avenue after November 1.

A. C. Canfield, of Springfield, Ill., spent Saturday and Sunday in the city calling on the trade. Mr. Canfield is on his way to visit relatives in Kentucky. G. Morrison, nurseryman, of Joplin, Mo., called on the different nurserymen the past week. We had with us also Dan MacRorie, who represents W. A. Maada, Inc., of South Orange, N. J. Boxwood was Dan's specialty this trip. He spent a week interesting the local trade in all the good things he had to sell. Claude Wisely, a young florist of Murphysboro, Ill., spent a few days making friends among the local trade.

All of our four wholesalers, Messrs. Kuehn, Berning, Smith and Augermulder, are handling a fine stock of cut blooms of everything in season, especially extra fine chrysanthemums, roses and carnations. Shipping trade is reported as excellent and local demand good.

The local seed houses along Fourth street are making big displays of bulbs and other goods pertaining to their business. They all report a brisk business in bulbs for Fall planting.

ST. PATRICK.

New Orleans, La.

News Notes.

The most absorbing topic among the florists here at the present time is the chrysanthemum, the main crop of which is grown for All Saints' Day, November 1. The general practice here is to plant in the open field and as soon as the flowers begin to show color to build a light framework over them and cover either with cloth or hotbed sash. Some growers raise chrysanthemums entirely under glass. Mrs. Henry Robinson is the leading variety as it can generally be depended on for that date. Other sorts are the Holst seedlings, which consist of two whites, a pink, and a yellow; Clementine Touse, Henry Cannell, Colonel D. Appleton and Honesty. Unfortunately, Mrs. Robinson with some growers has been badly infested with thrips this year, and where the pest was allowed to get a good foothold before using remedies, it destroyed the entire crop. Another pest is the grub of the June bug, which has also done considerable damage with some growers.

Herman Doescher on Gentilly avenue has a fine batch of Mrs. Henry Robinson and a nice pink variety, name unknown. Mr. Doescher is just completing a range of three houses of modern construction, concrete walls, Challenge ventilators, Hitchings boiler, etc. These houses are two 100x15 feet, one 100x20 feet. It is his intention to use two for forcing cucumbers and one as a plant house.

R. Lockaj will cut about ten thousand blooms of Mrs. Robinson. These are all in one batch and covered with cloth.

The Abele Brothers are growing Mrs. Robinson and Honesty; the latter they do not disbud, but grow to natural sprays. These are covered with hotbed sash and look well.

At J. A. Newsham's Nashville avenue gardens is to be seen a fine display of Mrs. Robinson. A bed of Colonel Appleton looks very promising, but a little backward.

Among the growers who have cultivated theirs entirely under glass, are the M. Cook's Sons, A. Allost, of Gentilly avenue and W. Nelson, of Nine Mile Point.

C. W. Eichling has made a specialty of forcing lily of the valley this Summer, and has found a good demand for it; at the present time he has a batch of several hundred Easter lilies in bloom; this is something unusual for the South for this time of the year. Mr. Eichling reports that they are selling well.

The October meeting of the Horticultural Society was held at the residence of President Eble. Several members brought blooms of early chrysanthemums, and after the usual routine business, the members were invited to the dining room, where Mr. and Mrs. Eble had provided a repast.

Robert Lockerie is in charge of the Nashville avenue rose gardens.

Louis Buchler, late with U. J. Virgin, and Robert Newsham are with the Metairie Ridge Nursery Company. Richard Eichling now has charge of Mr. Virgin's greenhouses.

CRESCENT CITY.

Hudson, N. Y.

The greenhouses of R. W. Allen, like those of most of the florists along the Hudson, are in splendid condition and filled with a choice lot of stock. Chrysanthemums are grown extensively. Preparations were under way for a display to which the public is invited some week when the chrysanthemums are at their best. This brings large crowds of people to the greenhouses and business is, in consequence, very good during the chrysanthemum display.

In a small house Mr. Allen has a few fine specimens of camellias planted out in the beds and covered with hundreds of buds. The variety is alba plena and the flowers are found most desirable for funeral work during the Midwinter months. It is not often that one finds this class of stock in a florists' establishment, the tendency now running to roses and carnations. A wreath or other piece of white camellias when obtainable presents a richness that the queen of flowers cannot always attain.

The greater part of a large house on this place is devoted to a fine stock of *Dracena indivisa*. This plant for filling the center of vases and window boxes is in large demand during the Spring and early Summer months; there was not sufficient stock in this section to meet the requirements the past season. A finer lot, however, could not be found than the house here, now filled for next season's business. Mr. Allen says it takes three years to grow a good *Dracena indivisa* three feet high in a six inch pot, feathered to the ground. The seed is sown the first season, and when large enough the seedlings are potted into 2½-inch pots. They are allowed to remain in these pots the first season and are wintered in a cool house. Being in small pots they occupy but little room. By Spring they are well established and have filled their pots with roots. They are then taken and planted out in the field where they make a fine season's growth and by Fall are all fine plants. They lift freely and suffer no apparent check from the operation, when the potting is deferred until cool weather sets in. An ordinary cool house will keep them in good condition through the Winter months. In the Spring of the third year they are handsome plants that are always in demand and command a price more remunerative than other stock that requires more time and care to bring it to a marketable condition. J. M.

Catskill, N. Y.

Henry Hansen during the past Summer has added four new greenhouses. This gives him a nice block of eight houses all filled with a general line of flowering and decorative plants such as is usually grown. In addition to the greenhouses a new cold storage room has also been erected. The walls and benches are of concrete, of Mr. Hansen's own construction. He is not only a good florist but an architect as well. The older houses have all been remodeled and painted so the entire establishment looks entirely new. Besides the greenhouses, Mr. Hansen has five acres in perennials and ornamental stock. J. M.

ARRIVED IN SUPERB CONDITION

BOXWOOD ready for delivery at once

Bushes for window boxes, 25c., 35c., 40c. and 50c. each.

GEORGE I. SCHUNEMAN'S VIOLET RANGE
BALDWIN, L. I., N. Y.

Amsterdam, N. Y.

Frank Hotaling reports a satisfactory season's business. The new concrete benches of his own construction in the greenhouses on Academy street are giving entire satisfaction. The few remaining benches in the other houses that are of wood will, as soon as their usefulness has passed, be rebuilt of concrete. Mr. Hotaling says the best is the cheapest in the end and concrete benches are, in his opinion, the best for greenhouse use. The Hotaling store is on South Market street and is in charge of Mr. Hotaling, Jr.; the store is attractive and is supplied daily with fresh stock from the greenhouses.

A. J. Hilton, who has recently changed his location, has a store also on South Market street. Mr. Hilton is pleased with his new location, which is a popular resort of flower buyers. An aquarium of gold fish, fish globes, and all the necessary supplies in this line make an attractive display.

The J. C. Hatcher store on Main street is always attractive. The output of two large ranges of glass located at different points in the suburbs help to make it so. A visit to the greenhouses at Hoffman's showed a fine lot of high grade stock in good condition. Besides a full line of roses and carnations, a lot of poinsettias, smilax and *Asparagus plumosus* is grown. What portion of this stock is not consumed in the local market is disposed of at wholesale to the florists and dealers in the surrounding cities. Your correspondent regrets that he was unable to see Mr. Hatcher to get a more complete account of the extensive business done.

J. M.

Ballston Spa, N. Y.

The greenhouses on the Schafer estate are in a fine state of preservation. A small house for Easter plants was erected the past season.

There are eight large houses, 125x20 feet, and one, 200x20 feet, devoted to cut flower growing. Chrysanthemums, smilax, roses and carnations are raised in quantities and in such a manner as to produce stock easily disposed of. Besides supplying the local market, a considerable part of the output is disposed of to the florists in nearby towns at wholesale. A prosperous business is reported. J. M.

Sandy Hill, N. Y.

Watkins & Son have added a new house for carnations and have only recently got them planted. The wooden outer walls of the older houses have been replaced with concrete the past Summer. The place and stock look well. In addition to the greenhouse they have several acres of good land on which they have a commodious residence. Mr. Watkins states his property is all paid for and is entirely satisfied with his condition and business prospects. Fruit is grown extensively and cider making was in progress. J. M.

Slingerlands, N. Y.

Fred. Goldring has finished three new houses the past season. One is now filled with poinsettias in good condition; one is in carnations and the other is to be used as a sort of cool house for azaleas, spiraeas, lilies and other Easter flowering stock. A thirty horse-power boiler was recently installed. This is a large plant and Mr. Goldring has taken all the necessary precautions to bring his stock through the Winter in the best possible condition. All the pipe and steam fitting as well as boiler work was done by the men on the place. To be successful in the growing business, Mr. Goldring says a man should know a few other things as well as plants. He finds a big saving in each season's business by a mechanical turn of mind in himself as well as those he employs. J. M.

Cohoes, N. Y.

A. D. Carpenter has just completed a new cellar for bulbs and cold storage. Another season will see more extensive improvements. Business is reported good. The "Carpenter Rapid Tie," a small metal band to take the place of raffia in tying up plants, manufactured here, is reported to have a good sale. For tying hyacinths or other stock it is said to be most desirable. The metal employed in the construction of the ties is so flexible that it will yield to the growth of the tenderest plant on which it may be used in securing it to the match stick on stake. J. M.

Schenectady, N. Y.

William Charles Eger, for many years identified with the florist business of this city, is the nominee of the Independent League for mayor of Schenectady. It is a three-cornered fight and Mr. Eger thinks his chances for election good.

J. W. H. Grupe reports business good in his line; he had a busy Summer, making improvements and extensions. A new heating plant has been installed and all stock is in good condition for a profitable season's business. J. M.

Orange, N. J.

Charles Maillard, Newark, has opened a branch store on Main street.

Henry Hornacker of Central has just completed extensive additions to his place, through which the town has run a new street—a carnation house, 16x104 feet, one 18x96 feet for miscellaneous stock, with a propagating house, 52x96 feet—and has installed two new Hitchings boilers No. 16.

Emil Decker, at Rosedale Cemetery, has put in two "Volunteer" boilers manufactured by W. H. Page of Norwich, Conn., and made other improvements. J. B. D.

CHATSWORTH, ILL.—Thomas Pep-pidine has installed a large new boiler in his new greenhouse.

COCOS WEDDELIANA

We offer a very nice grade of this, just right for centers of Fern Dishes, Jardinieres, &c., or for growing on. Plants from 3-inch pots 10 to 12 inches high, 4 to 5 leaves, \$2.00 per doz., \$15.00 per 100.

PETER HENDERSON & CO.
35 and 37 Cortlandt St., New York

Plant Notes.

ALTERNANTHERA BRILLIANTISSIMA is by far the best red alternanthera now grown. It holds its color right through the season until frost puts it out of commission. This variety is also valuable because of its good keeping qualities during the Winter, when that method is adopted for securing stock for the season following instead of rooting cuttings in the Fall. It is easily rooted and is capable of multiplication as rapidly as the other and older variety, which it is destined, in a great measure, to displace in the near future.

TUBEROUS BEGONIAS AS CUT FLOWERS.—The flowers of tuberous begonias are now, or at least have been during the past Summer, in great demand for dinner table decoration. They are capable of producing rich and pleasing effects and, some might say, at a small cost; but when it is known that W. W. Rawson & Company, of Boston, have a pink variety listed in their catalogue at \$6 each, it will be seen that whoever uses flowers of that variety while it is a novelty, and at that price, is not using tuberous begonias because of their cheapness.

CYPRIPEDIUM INSIGNE.—One of the easiest grown cypripediums is insigne, and it is also one of the most unfailing in its serviceable qualities. Young plants can be purchased at a very reasonable price, and once in the possession of a grower it increases steadily in value and usefulness in its productive capabilities.

ROSE NEWPORT FAIRY.—Although there are now several excellent roses grown and distributed, resembling that known as Newport Fairy, it is distinct enough in character to make it well worth possessing; and once in possession of it no one will have the slightest difficulty in increasing the stock with rapidity.

LOBELIA KATHERINE MALLARD.—Now is the time to procure a few plants of this most promising double lobelia. It is easily increased by propagation from cuttings. A few plants secured at the present time will enable one to obtain considerable stock by next Spring. It must be remembered that the notoriety given this lobelia by the exhibition of it at different places, as well as by its advertisement, will help those who obtain a supply now, as well as those who went to such trouble and expense in the way of giving its good qualities wide publicity. D. M.

REVIEW OF THE MARKET

NEW YORK.—While supplies of flowers are not by any means heavy just now, there seems to be very little life in the trade, and stock moves very unsatisfactorily. Chrysanthemums we do not believe are bringing near the money they did one year ago. It seems a very hard matter to obtain \$3 per dozen for some of the large blooms coming in, varieties that heretofore have brought from \$3 upward with little trouble. At present blooms can be had at anywhere from 50c. per dozen up, and \$1 to \$1.50 per dozen will purchase very fine flowers, indeed.

There has been no perceptible change in the price of roses. These flowers are not plentiful by any means; if they were, the prices would drop down very low. It is only the meager supply coming in that keeps values where they are. The same remarks will apply to carnations; not so many coming in, which keeps prices about stationary.

There is a plentiful supply of cosmos; it certainly has been a good year for these beautiful flowers. Dahlias and gladioli are few and far between. Violets are not at all plentiful and prices range anywhere from 30c. to 75c. per 100. Lily of the valley is too abundant for the demand and is not bringing satisfactory figures. Lilies are very plentiful, with no change in prices from last week's quotations. The supply of gardenias seems to become larger every day and prices have a downward tendency.

There is a good supply of cattleyas on hand, and any retailers who want to make a special exhibit of these flowers would find this a most opportune time to do so, as they can be bought in quantity.

For what retail work there is, forest leaves seem to be used mostly, and the demand for smilax, asparagus and maidenhair fern is, for the time being, anything but brisk.

CHICAGO.—Trade last week, though at no time rushing, could be classed as fair to good throughout. Every line seemed to share in a fairly active call, though it appeared that the shipping demand was comparatively more brisk than the local call. Outdoor stock in this vicinity is all through, but good gladioli from more southern points are still arriving in quantity and in good shape. Toward the latter part of the week chrysanthemums were coming in in quantities, though, perhaps, not sufficient to call it a glut at least showing a tendency in that direction, and by the time these lines are read that condition will doubtless exist, especially in the smaller grades.

It is observed that thus far the chrysanthemums have not cut into roses and carnations to the usual extent and these are fully holding their own. Roses are generally in sufficient supply to fill orders, though the consignments of American Beauty, which are fine in quality, are none too heavy. Carnations are generally good and holding their price well, with an increasing supply.

Longiflorum lilies, Lily of the valley and violets are to be had in plenty every morning, but clean up well during the day.

Green stock is in sufficient supply for all demands.

By the middle of the present week the over supply of chrysanthemums became more evident with a tendency to lower prices; and the effect on the carnation demand began to assert itself, prices showing a considerable falling off, commencing during the day Tuesday.

W. K. W.

BOSTON.—Business is none too brisk; in fact, there has been a considerable drop in prices, with the exception of roses, which seem to hold their own. Some very fine grades of American Beauty are seen, the price for the best being \$3 per dozen. Other roses are now of very good quality and there are especially fine grades of Killarney and Richmond.

Carnations have improved, but the stems are not yet of great length; for the general grades the price has fallen from that of a week ago, while some of the first-class blooms yet maintain good values.

Chrysanthemums are very plentiful; prices have dropped, and the flowers do not move so quickly as desired. The general grades bring from \$4 to \$8, while some of the extra fancies fetch \$1 and \$2 per dozen. Violets are im-

proving in quality and sell fairly well. Lily of the valley is good, at from \$2 to \$5. Asparagus and other green goods have a steady demand at regular prices.

J. W. D.

PHILADELPHIA.—We find the market in better condition this week, stock not quite so plentiful, and the demand brisker. Most of the early chrysanthemums are out of the way, and the larger flowers of midseason varieties are now seen. Prices are still very uncertain, \$1.50 and \$2 per dozen being usually obtained for most stock; on Tuesday a few dozens of Mrs. Robinson sold at \$3.50 per dozen.

American Beauty roses are in better demand; \$3 to \$4 per dozen is asked for the best stock. Tea roses, a few extra choice, have sold at \$10 per 100, but \$6 to \$8 is top price for most of the stock.

In carnations, such sorts as Winsor and Enchantress are selling at \$3 general stock at \$1.50 and \$2 per 100. Many complaints have been heard recently of carnations keeping poorly, but the past week an improvement has been noticed in the keeping qualities.

Cattleyas are in fair supply at \$50 to \$60 per 100. Daisies bring \$1.50 and \$2 per 100. Lily of the valley is in good supply at \$4 to \$5 per 100. Asparagus sells at 50c. to 75c. per bunch. Neither double nor large single violets are yet cleaning up well, but the demand is improving; doubles are realizing 75c. to \$1 per 100; large singles, 25c. to 50c.

DAVID RUST.

PITTSBURG.—A cold spell of several days' duration has put an end to cheap stock. The thermometer dropped to freezing point, and lower in some localities, but we still look for some good weather. As to stock of cut flowers, there is plenty to be had so far; even dahlias are yet in the market and command a good price, which they have done for the past few weeks—from \$1 to \$1.50 per dozen for good blooms. Roses seem plentiful at fair prices. American Beauty are not in great demand although offered at very reasonable prices. Carnations are coming in better as to quantity and quality; \$3 per 100 is obtained for good stock. J. Wyland of De Haven is cutting fine blooms, which sell readily. Chrysanthemums have advanced in price since outdoor stock is gone. Good sized blooms are now coming in of all colors, white and yellow predominating.

The cut flower trade is fairly active, wedding orders are numerous, and funeral work has been good for several weeks.

E. C. R.

ST. LOUIS.—We are at present having most delightful weather, and Indian Summer is with us. Regarding the wholesale market the past week, one would say that it was over-crowded with roses in all varieties. Chrysanthemums, too, dragged a little, nearly all the early sorts are gone and the mid-season varieties are not yet in full force, but good shipments of these are expected by next week. Violets and carnations are improving daily as to quality of bloom and in the stems.

The retail trade was not so well satisfied with the business done the past week. Funeral work, as usual, helped out greatly, also a few small weddings.

The International balloon races are on this week, and have brought a great many visitors to our city, especially those from abroad. They will be well entertained by our society people, and this should help the local flower trade very much in the line of decorations for dinners and receptions.

Your correspondent, who is a daily visitor to the wholesale district, found prices running the past week as follows: Fancy chrysanthemums from \$2 to \$3 per dozen; next choice, \$1 to \$1.50; small stock, 50c. to 75c. American Beauty roses, extra long, fancy, \$4 to \$5; medium stems, \$2 to \$3; shorts, 50c. to \$1 per dozen. In the smaller roses of Bride and Bridesmaid, the best do not bring over \$5 per 100; firsts, \$3 to \$4; seconds, \$1 to \$2 per 100. Carnations, first quality, fancy, \$3; next choice, \$2, and common sorts from \$1 to \$1.50 per 100. Violets, 35c. for the best, 25c. for next choice. Lily of the valley, \$3 to \$4 per 100. Cosmos is down to 35c. per 100; tuberose stalks bring \$3 to \$4 per 100. Other outdoor stock was killed by frost. In greens the usual prices prevail.

ST. PATRICK.

THE EXHIBITIONS

WAPPINGERS FALLS, N. Y.—The dahlia show held here last week was a great success. The prize list occupies a full page of the local paper. Several interesting exhibits were staged by children. Among those in the trade who offered premiums to be competed for were F. R. Pierson Company, Peter Henderson & Company, W. Marshall & Company, Arthur T. Boddington, Henry A. Dreer, and Arthur Cowee. Certificates of merit were awarded as follows: Arthur Cowee and John Lewis Childs, for collections of gladioli; James Vick's Sons, Rochester, N. Y., for asters; Adam Laub & Son, for vase of carnations.

HUNTINGDON, N. Y.—The annual Fall exhibition of the Huntingdon (N. Y.) Horticultural and Agricultural Society was held September 26. The exhibition was well attended and the stock shown of excellent quality throughout, the vegetable and fruit departments being particularly fine. The flowers were damaged by the severe storm a few days preceding. A table of named and mixed gladioli from Arthur Cowee, Berlin, N. Y., attracted much notice. August Heckscher made a fine stage decoration of palms and nephrolepis.

Some of the prize winners were as follows: Peter Henderson & Company prize, won by Walter Jennings, Rich'd Cartwright, gardener; Vaughan's Seed Store prizes, won by August Heckscher and H. T. & A. H. Funnell; Rickards Brothers prizes, won by J. H. Smith of Rosemary Farm and August Heckscher; Stump & Walter Company prizes, won by Mrs. Sydney A. Smith.

The judges were C. H. Allen, Floral Park, N. Y.; Henry Hicks, Westbury, N. Y.; George Ashworth, Glen Cove, N. Y.; and H. Riddle, Farmingdale, N. Y. A. H. FUNNELL, Secretary.

In connection with the regular meeting of the Nassau County Horticultural Society, held at Glen Cove, N. Y., on October 9, there was a splendid exhibition of dahlias in six classes. Specially fine was the best collection of dahlias, sixty-nine varieties, shown by James Duthie of Oyster Bay, winning the first prize.

For best vase of single dahlias, Jeremiah O'Brien was the winner.

For best twelve cactus dahlias, James Duthie took the prize.

For twelve best double dahlias Mr. Duthie was again a winner.

W. H. Bowne's specials for the best six distinct varieties of dahlias, James Duthie first and F. Dummock second.

H. F. Meyer special for largest dahlia bloom, James Duthie.

There was a large attendance at the meeting and four propositions for membership were received. In the point contest chrysanthemums were shown, Adolph Janecke getting 88, A. Mackenzie 87 and Henry Inatz 75.

The prize offered by Mr. Janecke for best collection of chrysanthemums was won by S. J. Trepass.

FIRMS WHO ARE BUILDING.

WOBURN, MASS.—Joseph Farrell, corner of Merrimack and School streets, is erecting a greenhouse.

PLYMOUTH, MASS.—W. G. Neilson has broken ground for the erection of two greenhouses on Academy street.

PIQUA, O.—Harry P. Smith, florist, is having a new greenhouse added to his place. An old one was destroyed by a falling chimney.

MEMPHIS, TENN.—Charles Hammer is erecting greenhouses here, and will occupy an office and salesroom at 13 and 15 South Main street.

MIDDLE VILLAGE, N. Y.—William Witte is building a greenhouse 175x31 feet, to be devoted to carnations. Theo. F. Terwilliger is doing the work.

DOVER, N. H.—Extensive improvements and important additions have been made on the plant of C. A. Davis, florist, the past season and the work is not as yet entirely completed. The fourth new greenhouse is now in process of construction, the dimensions being 20x100 feet. The three greenhouses already built are 22x106 feet, 32x106 feet and the other 40x106 feet.

Coming Exhibitions.

(Secretaries of societies not mentioned here will oblige by forwarding schedules of their respective shows.)

OCTOBER 30-31.—Monmouth County (N. J.) Horticultural Society Tenth Annual Exhibition. Secretary, H. A. Ketel, Red Bank, N. J.

OCTOBER 31 and NOVEMBER 1.—Morris County (N. J.) Gardeners and Florists' Society, Twelfth Annual Flower Show, Secretary, E. Reagan, Madison, N. J.

OCTOBER 31, NOVEMBER 1 and 2.—United Bay Shore Horticultural Society, Sixth Annual Exhibition in Carleton Opera House, Manager, John R. Howell, Bay Shore, N. Y.

NOVEMBER 5-7.—Nassau County (N. Y.) Horticultural Society, Glen Cove, N. Y., Annual Exhibition.

NOVEMBER 6-8.—Tarrytown (N. Y.) Horticultural Society, Ninth Annual Exhibition, in Music Hall. Secretary, E. W. Neubrand, Tarrytown, N. Y.

NOVEMBER 6-8.—Chrysanthemum Society of America, American Institute, 19-21 W. Forty-fourth street, New York. Secretary, David Fraser, Pittsburg, Pa.

NOVEMBER 6-8.—Denison (Tex.) Civic Improvement League, Annual Flower Show. Secretary, T. W. Larkin.

NOVEMBER 6-8.—New Haven (Conn.) County Horticultural Society, Seventh Annual Exhibition, in Music Hall. Secretary, Walter Koella, 58 Bishop street, New Haven, Conn.

NOVEMBER 6-12.—Horticultural Society of Chicago, Annual Exhibition. Assistant Secretary E. A. Kanst, 5700 Cottage Grove avenue, Chicago.

NOVEMBER 7-9, 1907.—Southern California Horticultural Society, in Blanchard's Hall, Los Angeles, Cal. Secretary Ernest Brautnon, 128 South Los Angeles Street.

NOVEMBER 8-10.—Massachusetts Horticultural Society, Chrysanthemum Exhibition. Secretary, Wm. P. Rich, Horticultural Hall, 300 Massachusetts avenue, Boston, Mass.

NOVEMBER 11-17.—Horticultural Society of Buffalo, First Annual Flower Show. Secretary, John H. Tranter, P. O. Box 904, Buffalo, N. Y.

NOVEMBER 12, 13 and 14.—Pennsylvania Horticultural Society, Horticultural Hall, Philadelphia, Pa. Secretary, David Rust, Broad street, below Locust.

NOVEMBER 12-14.—Florists' Club of Washington, Annual Exhibition. Secretary, Chas. McCauley, Eighteenth and Keayne streets N. E., Washington, D. C.

NOVEMBER 12-15.—St. Louis Horticultural Society, Annual Exhibition. Secretary, Otto G. Koenig, 6473 Florissant avenue, St. Louis, Mo.

NOVEMBER 12-16.—Ontario Horticultural Society, Exhibition of Chrysanthemums, carnations and roses at Toronto. Secretary, H. B. Cowan, Parliament buildings, Toronto, Ont.

NOVEMBER 14.—Worcester County Horticultural Society Chrysanthemum Exhibition. Secretary, A. A. Hixon, Horticultural Hall, 18 Front street, Worcester, Mass.

NOVEMBER 14-16.—Arkansas State Floral Society, First Annual Exhibition. Secretary, G. R. Brown, Little Rock, Ark.

NOVEMBER 14-16.—Arkansas State Floral Society, Annual Flower Show. Secretary, Charles Vestal, Little Rock, Ark.

NOVEMBER 15-16.—Rhode Island Horticultural Society, Autumn Exhibition. Secretary, C. W. Smith, 27-29 Exchange street, Providence, R. I.

SCHOOLCRAFT, MICH.—The Schoolcraft Forcing Houses have been established here to raise flowers and vegetables. The company has two greenhouses, 23x100 feet, nearly completed, and expects eventually to cover several acres with greenhouses. It is expected that the first vegetable crop will be ready for the January trade. Leo Croppson and Chauncey Simonds, two young men who received their training at the M. A. C., are at the head of the company.

CHICAGO.—The Drexel Floral Company has been incorporated, capital, \$1,000, to do a florists' and confectioners' business; incorporators, William T. Underwood, Delavan B. Cole, Alvin L. McElroy.

WACO, TEX. — All arrangements
have been completed for the annual
flower show to be given in this city. The
dates for the event are November 13,
14, 15 and 16. An elaborate program
is being arranged. The premium list
has been published and the hope is to
make the affair the greatest that has
been given by the society. The Elks will
officiate at the opening of the show, and
the ladies of the city will act as a re-
ception committee during the entire
time. Capt. J. D. Shaw is president
of the society. W. W. Seeley, chairman
of the gentleman board of managers, and
Mrs. W. S. Plunkett chairman of the
lady managers.

CLARKSVILLE, TENN.—The pack-
ing house at the Evergreen Lodge Flow-
er Gardens was destroyed by fire on Oc-
tober 18; loss, \$600, partly insured.

MILWAUKEE, WIS.—On October
16, the Milwaukee County Old Settlers'
Club tendered a reception to John W.
Dunlop, florist and club member.

Chicago.
The Week's News.

The season is well on at Leesley
Brothers' nursery out at Peterson and
North Fortieth avenues, where 200,000
shrubs, which, partially owing to the
favorable season and considerably to the
careful culture they have received, are
in unusually fine condition for Fall
transplanting. They have an extra
large stock of weigelas, dogwoods, spi-
reas, Thunberg's barberries, lilacs, elders
and honeysuckles, their specialty being
hardy shrubs. The outlook for Fall
business is very encouraging, a number
of large contracts having already been
placed with the firm for parks and
country estates, as well as smaller orders
in larger number than in previous years.
Six thousand peonies in thirty of the
most desirable sorts have been planted
this Fall.

In order to exert an influence toward
securing the business of trade unionists,
two or three retailers have joined the
Gardeners and Florists' Union, for which
privilege they are assessed \$25, while the
regular initiation fee is but \$2.

Fred Weber, who has been seriously
inconvenienced in attending to his green-
house work, for several months this past
Summer, by a knee affliction which at
times entirely incapacitated him, has
now thoroughly recovered and though
his houses of American Beauty roses
show the effect of the lack of his per-
sonal attention and usual careful hand-
ling, he says he will have them in proper
condition from Thanksgiving on.

George R. Scott of the Winterson
force returned last week from his vaca-
tion in Indiana and speaks in the high-
est terms of the courtesies extended him
by representatives of the trade in that
section.

Mr. Button of Button Brothers,
Lake Geneva, Wis., was in the city last
week, especially attracted here by the
corn show but also finding time to call
on the florist houses.

The Benthey-Coatsworth Company's
cut from New Castle is showing up in
good shape now all round, but especial
pride is taken in the stock of Killarney
roses which is daily arriving.

At John Assa's on Bowmanville road
may be seen several houses of Bride and
Bridesmaid roses, to which his entire
range and energy are devoted, which call
for especial mention. The plants range
from two to eight years old and are in
as perfect condition as the most severe
critic could desire.

E. H. Hunt has issued for the accom-
modation of the concern's customers an
especially neat seventy-two page, cloth
covered catalogue of supplies, fertilizers
and all florists' accessories.

John Gormley assumed his former re-
lations with the State street store of
Canger & Gormley early last week, hav-
ing wearied of the cut flower branch of
a department store in Minneapolis where
he has been located during the Summer.

William F. Schofield has added to his
equipment a handsome new mauve tinted
delivery wagon. The recent loss of
\$75 worth of Mr. Schofield's palms,
which were destroyed by the health
board when it was found they had been
exposed to a contagious disease, has
been adjusted by the undertaker, who,
it seems, was at fault in not having
taken the required precautions and
whose license was endangered had Mr.
Schofield taken legal proceedings against
the city as was his intention.

De Witt W. Ludwig of the E. C. Lud-
wig concern, Allegheny, Pa., passed
through Chicago on his way to Califor-
nia last week.

John D. Sterratt, son of John Ster-
ratt, has just recovered from a very seri-
ous surgical operation of a compound
nature, a rupture and appendicitis being
treated at the same time. He is practi-
cally as sound as ever after the treat-
ment.

Ralph Smith, formerly with the Chi-
cago Carnation Company at Joliet in a
recent personal letter to a friend in
Chicago states that he is in charge of
the greenhouses of the Missoula Nursery
Company of Missoula, Montana, where
he believes the ideal climatic conditions
of the world are to be found for growing
carnations. He adds that the cost of
production is high, but is offset by the
fact that a good geranium in a 4-inch
pot brings half a dollar, while the min-
imum price for carnations is one dollar
per dozen.

Next Thursday is All Saints' Day and
the shippers who enjoy a trade in the
extreme South, particularly New Or-
leans, are looking for a good business
for the occasion, many orders having
been coming in for the past week.

The A. L. Randall Company, to facili-
tate the handling of their large increase
in the cut flower business and more espe-
cially in the supply business, which is
now only in its second year, has in-
creased its capital stock from \$10,000
to \$50,000. This concern is about to
establish a private telephone exchange.

Leonard C. Allaire of Hatfield, Mass.,
a cousin of W. E. Lynch and a recent
graduate of Amherst College, has en-
tered the sales force of the E. H. Hunt
concern.

Next Wednesday evening, October 30,
is the time and Columbia hall the place
when the great anticipations of the
terpsichorean devotees of the trade are
to be realized at the annual ball of the
Wholesale Florists' Employees.

D. J. Murphy, Manistee, Mich., was
in the city last Saturday on a business
trip. He expresses himself as well satis-
fied with the prospects in his new lo-
cation where he bought last Spring and
where his business is largely retail.

Knud Gundestrup, who has many
friends in the flower trade, will receive
their congratulations on his continued
prosperity and the incorporation of his
business, a notice of which appears in
our Seed Trade Report on another page
of this issue.

Carl Cropp, secretary and treasurer of
Vaughan's Seed Store, in excellent
spirits and in the pink of physical con-
dition, returned, the first of the week,
from his three months' trip to the Fath-
erland, where besides absorbing a quan-
tity of pleasure and health he secured
some novelties, among which were the
new Nephrolepis var. todecandrus, the origi-
nal true Asparagus plumosus nanus
which does not produce seed, a number
of new dahlias, and others from which
we expect to hear later.

24 STONE STREET, ROCHESTER, N. Y.

James Keeley, editor of the Daily
Tribune, who is as true a horticulturist
at heart as is to be found, has just be-
come possessed of a forty acre farm
where he may enjoy this hobby to the
fullest extent. He is taking his usual
interest in Chicago's Great Flower Show
and will add one attractive feature in
the shape of a new song, which will be
written and placed to music for the
occasion and rendered during the exhibi-
tion.The sympathy of innumerable friends
in and out of the trade is extended to
George Collins, foreman at Peter Rein-
berg's, on the death of Mrs. Collins
which occurred last week.Carl N. Thomas of the A. L. Randall
Company returned Monday from his
Summer home at E. Springfield, Pa.,
and during the season will remain at
the old headquarters.President Bruns has appointed as a
committee to represent the Chicago
Florists' Club at the flower show, J. P.
Degnan, chairman. A. L. Vaughan and
Alex. Henderson.The E. F. Winterson Company has
received word from its special repre-
sentative in the holly district that though
high grade holly is not abundant this
season the firm's supply is secure.P. J. Hauswirth had an extensive
decoration at the Auditorium Saturday
evening last on the occasion of the
grand banquet celebrating the thirty-first anniversary of Chicago lodge No.
4, B. P. O. Elks. A number of florists
attended.Mrs. C. E. Warder, 201S West Madi-
son street, has sold her florist business
to Miss Sawyer, whose father is noted
in this section as a pansy grower.Mr. Osler of Sherer & Osler, Fort
Wayne, Ind., was a visitor the first of
the week, laying in a stock of supplies.Mrs. Magdalene Transch, who died at
Evanston on Sunday morning at the ripe
age of 84 years, was the mother of Mrs.
Peter Risch.It is reported that the Southern rail-
roads since last season have rearranged
their rates on holly, reducing the maxi-
mum weight to a carload. This and
prepayment or equivalent guarantee,
which went into effect when two or three
years ago some 30 carloads consigned to
South Water street dealers were left on
the hands of the roads, all tend to higher
prices.Otto Kuehnel & Son, florists and nur-
serymen at Sixty-first and Ashland ave-
nues, is one of the latest additions to
the city's flower shops. Mr. Kuehnel
was formerly an employee of the South
Side parks.From two and a half cents a pound,
which a few years ago was considered
a fair price for bouquet green or prince's
pine, the cost has already advanced until
this year it is being quoted for future
delivery at six to eight cents per pound.
The reason given now for such appar-
ently exorbitant charges is that owing
to prosperous times in more remunerative
lines of labor it is next to impos-
sible to obtain help to gather the green.T. Y. Kenyon, manager of the Zenith
Rustic Manufacturing Company, 769
Gerard street, whose specialty is an at-
tractive line of birch-bark goods made
from Siberian bark to which liehens are
very generously attached, says that his
force is working nights to keep up with
orders at present.The plans for Chicago's Great Flower
Show go on apace and every day the
outlook becomes more favorable for the
grandest exhibition ever held. W. W.
Coles, Kokomo, Ind.; J. H. Dunlop, To-
ronto, Can., and John T. Temple,
Davenport, Ia., have been invited to act
as judges. The souvenir postcards are
out and by the last of this week the pos-
ters will be distributed. At a meeting
of the executive committee held on Tues-
day the numerous plans which had been
tendered for the laying out of the hall
and the exhibits were discussed, some
excellent ideas having been presented.Vaughan & Sperry report the violet
business as still unsettled. Mondays,
Wednesdays and Saturdays generally
proving the best days of the week for
their sale.

THE TRADE ONLY—
When Writing Please Mention

Notes from Ohio.

Schillinger Brothers of Bucyrus, O., have some fine chrysanthemums and carnations.

E. J. Foster & Sons, Findlay, O., have added a new house, 95x20 feet, to their range. Mr. Foster tells me it has been an exceptional Summer with him for funeral work. He has been very ill, but is now in pretty good health. The Fosters are great carnations breeders, and have originated some very fine stock; they have not named the varieties and have not put them on the market yet, as they do not feel the stock has reached perfection.

The Swan Floral Company, managed by Mr. Waalands, of Findlay, reports good business and a fine outlook for this Fall.

A. F. Smaltz of Tiffin, O., has some exceptionally fine carnations; his place is not large, but his stock is always good.

Mr. Ulrich, Tiffin, has a fine retail trade that keeps him busy.

Williams Brothers, Lorain, have added a house, 60x42 feet, to their range; ing White Lawson this season in place devoted to carnations. They are trying Queen Louise.

Ralph Harrison, Oak Harbor, has a fine lot of carnations and chrysanthemums. He grows a general stock.

W. C. Woner, Port Clinton, grows some fine Mrs. Lawson carnations. His soil makes this variety throw a lighter color than is usually seen.

White's Conservatory, Sandusky, has erected a new house, 20x60 feet, equipped with electric light.

Mrs. A. Schaub, Sandusky, has a fine general stock of flowers and plants; she does lots of design work.

Harry Heinel, West Toledo, has been growing carnations in pots all Summer for Summer-blooming and finds them very successful.

Rode Brothers, Bowling Green, have a good stock of carnations of the usual varieties; the plants are well advanced and are full of bloom.

Mrs. Villa Andreas, Bowling Green, has a very successful retail business. Her place, at corner West Wooster and Church, is favorably located and her trade is the best.

Detroit.

Trade Notes.

The main feature in the local market of last week was a scarcity of stock although chrysanthemums are coming in quite freely. Most of the trade are busy, principally with Fall weddings; those who look after the better class of business are getting crowded with all kinds of society orders.

John Breitmeyer's Sons' newly renovated plant wagon has again appeared. Its color this time is a deep royal blue, with narrow gilded molding frames in a large deep olive green field on which appear in gold script lettering: "John Breitmeyer's Sons, Florists"; and on the back doors in large letters "Palms for Decorations."

The Detroit Florists' Clubs' last meeting was full of activity. President Scribner appointed Al. Pochlon, Wm. Hiescher, and Walter Taepke on the entertainment committee. November 1 has been selected as the day for the Detroit boys to call on their fellow florists and club members in Mt. Clemens.

The meeting on November 19 will be held at Harmonie Hall. Its special feature being an exhibit of the products of club members presumably mostly chrysanthemums. The judges appointed are Thos. Brown, Robert Unger, and Al. Pochlon; they also are allowed \$25 to be used as prizes.

Planting of nursery stock started last week, and considering the upheaval all around the selling agents must have been quite industrious. There is no mistaking the fact that the general prosperity causes house owners to look at a nursery agent more friendly than in years gone by. Still, to keep up this good work and create that effect in improving front lawn and backyard which stimulates others to follow their neighbor's examples, it seems necessary that nurserymen give better instructions to their selling agents. To pick up any inexperienced man, give him a picture book and a lot of order blanks, does not make a fit subject to sell nursery stock. This policy of "sell the goods" has already come near to killing the goose which lays the golden egg. A little ad-

Hammond's Grape Dust

KILLS MILDEW ON ROSES, CARNATIONS, VIOLETS AND CHRYSANTHEMUMS

ROBERT SIMPSON, Rose Grower

Clifton N. J., Oct. 11, 1907

Dear Mr. Hammond: In reply to your inquiry regarding my experience with Grape Dust, would say that I am glad to be able to say a good word for the article in question, because I have found it so generally satisfactory when used for mildew on roses.

I do not know anything about its constituents, nor do I care so long as it does the work, and is as economical as anything else on the market.

During the summer when the steam pipes cannot be brought into use to check mildew, and dusting over the foliage has to be resorted to, we prefer to use Grape Dust rather than sulphur, because it is so much lighter and finer in texture: a given number of pounds will cover more than twice the number of plants; will cover them more thoroughly, and Grape Dust can be put on with a bellows in about one-fourth the time that would be required for sulphur.

The fact that I have used it continuously for ten or twelve years should prove to you that I consider it the best article on the market for the purpose for which it is used.

With best wishes I am,

Yours very truly,

ROBERT SIMPSON

FRANK DANZER.

BELLEFONTAINE, O.—Robert S. McMurray of Wapakoneta has purchased the floral establishment of Poole & Purllant on East Columbus avenue, and is now in charge of the business. For two years Mr. McMurray was the manager and decorator of the floral department at the Royal Ponciana hotel at Palm Beach, and was engaged for one season as a floral decorator in New York city. He is experienced in all lines of the business and expects to give Bellefontaine flower lovers the best to be secured at all times.

BLOOMINGTON, ILL.—The Bloomington Florists' Club met last week at Washburn & Son's and elected the following officers: President, John Gee; vice-president, George J. Foster; secretary and treasurer, Ray Smock. It was decided to hold one meeting a month at which some one phase of the business should be taken up. After the meeting the club was entertained at dinner at the New York Café by the retiring president, A. R. Knowles.

THERE ARE MANY SERIOUS THINGS TO CONSIDER

when you put your dollars into a greenhouse, but none are so serious as light and endurance. These two things we have worked out, hand in hand—every time our construction has been made more enduring, a lighter house has also resulted. The best example of this was when we designed our Half Iron Frame House and did away with that heavy wooden plate with nailed-on roof bars, and substituted the Steel Eave and Roof Bar Brackets that decrease the shade by fully two thirds and add wonderfully to the life of the house. If you want to spend your money for a construction that lasts—here it is. Write us.

HITCHINGS & COMPANY

GREENHOUSE DESIGNERS AND BUILDERS

Manufacturers of Heating and Ventilating Apparatus

1170 Broadway, New York

Los Angeles, Cal.

News Items.

The firm of Dieterich & Huston has been dissolved by mutual consent, Mr. Huston retiring from the business. A new house, 20x50 feet, is an addition to their range of glass. This firm has furnished, daily, for years the Santa Fe Railroad Company with small pans of ferns and other decorative plants for its overland trains. The concern also has the distinction of having the only stock of Cocos plumosus of large size on this coast, ranging in height from 10 to 20 feet, grown in boxes.

The Palm Garden, W. D. Ballerstedt, proprietor, grow their stock by plunging the pots or cans in beds below the surface of the soil with raised walks between the beds. The advantage over the method practiced by all other nurserymen on this coast is, that when watering is to be done the bed is flooded, which obviates the necessity of the services of a man to water each pot or can separately. The quantity and quality of stock at this place is large and fine.

The latest addition to the list of flower stores in Los Angeles is that of Weiss & Pannebecker, recently from 2251 Second avenue, New York, who are located in the Pacific Electric Building, and have adopted the name of the building for their store. The location is an ideal one, and these people are a welcome addition to our rapidly growing city and the expanding trade in cut flowers and plants. We now have thirty-two flower stores here and eighty-four street vendors of flowers. These last named pay a monthly license of five dollars for the privilege of selling from the curbs.

Cut flowers are plentiful, all being outdoor stock and wholesale at the following prices: Roses, \$2 per 100; carnations, 35c. to 75c. per 100; violets, 60c. per dozen bunches, 75 flowers to a bunch. Gaillardias, scabiosa, Mexican poppy and all that class of flowers are under 25c. per 100. The retail price of all stock is regulated by the conscience and courage of the retailer, who sizes up his customers and charges according to his estimation of their ability to pay.

Tom Wright's range of seven houses, under the management of Frank Speakman, a graduate in the business from Chicago, are looking fine. Carnations and roses fill six of them; the other is devoted to chrysanthemums which are very well grown. A recent sand storm played havoc with plantations of chrysanthemums in the field, whipping the flowers about and leaving those well advanced in a badly damaged condition. Speakman began forcing the 15th of September. This may seem to be a strange statement to come from the land with the appellation of "sunshine and flowers," nevertheless it is a fact, and he had to do so from necessity rather than choice and will be obliged to keep it up with varying degrees of intensity until next April. At present a line of inch pipe, steam heat, is all that is required. And herein is the great contrast of climatic conditions between the Atlantic and Pacific Coasts, viz., the great range of temperature between midday and midnight. The rarified atmosphere

and cloudless sky permit sun rays to reach the earth with a directness and intensity unknown in the East, while radiation at night is quite as free and rapid from the same cause, hence the range in temperature, and the necessity of artificial heat at night. Roses grown in the open have quite a different appearance from those grown under glass; the vigorous young growth and foliage of all varieties have a dark bronze color—some sorts being as dark in color as the foliage of the copper-colored beech.

The semi-annual exhibition of the Southern California Horticultural Society will be held in Blanchard Hall, November 7, 8 and 9. The time between the announcement of the date and the holding of the show is so short that exhibitors will have to hustle to get ready for the occasion. Floriculture is not practical on this coast as it is in the East. Show plants of chrysanthemums, asters, and such things as are grown under glass with great care and at great expense of time and money, are never seen here, the range of plant life being so great in the open air that everybody is more than satisfied with what may be produced in that way. The admission to this show is to be 25c., instead of 50c. as has been the case in the past. All members of the society are to receive two season tickets, while all exhibitors not members are to have one—a more liberal, and, in the opinion of the writer, a wiser policy.

The second rain of the season is now with us, October 15 and 16—warm, balmy, humid weather. By Christmas our now brown, barren looking country outside of irrigation districts will be covered with green, the whole having the

appearance of May on the Atlantic coast.

The Japanese are establishing themselves in our midst that they may be considered permanent residents. Some of their establishments are models of neatness. As growers of plants and ornamental stock they show no superior ability over men of other nationalities in the same business on this coast. Fears were entertained by white men that these little brown fellows would enter the field of the commercial growers, and raise stock in such quantities and sell it so cheaply that other races could not compete with them, and be driven out of the business; but these thrifty people know what plants are worth, and do not fail to charge as much for good stock as any other grower. They cultivate large quantities of small fruit; indeed, they are the principal growers about Los Angeles, and following the example of other "captains of industry," have a combine or trust, and impose a heavy penalty on any member who sells his fruit below the market price.

P. D. B.

PASADENA, CAL.—Local gardeners propose to issue a monthly newspaper, to be known as the Pacific Gardener. D. W. Coolidge, secretary of the board of trade, will be the editor. The officers of the newspaper company are: President, John Blake; vice-president, Otto Heutschy, gardener for Frank B. Holder; secretary, James Ferguson, assistant park commissioner. The directors are the officers, and George F. Nilsson, Neil Campbell and R. G. Frazer. The first number of the magazine will appear in December.

Talk the Matter Over

with us before you place
an order for your green-
house material. It's a
peculiar fact that every
year more and more of the
florists and growers are
coming to us for our ma-
terial and for our construc-
tion. It means more profit
from your houses and less
expense for repairs. Every-
one is interested in making
money and now is your
opportunity to get in line
with the great host of our
customers who are saving
on their coal bills, on their
repair bills, and taking off
all the prizes on their stock.

Write to us for that hand-
some new catalog. It tells
all about our materials.

Prices Advertised in these Columns are for THE TRADE ONLY—When Writing Please Mention THE FLORISTS' EXCHANGE.

THIS IS IT

The new greenhouse ventilating catalog. It differs from other catalogs because it not only shows gears and names prices, but goes into their merits, and special purposes to which they are best adapted, in an interesting way, just as we would talk it over together. Along with the rest, we would probably bring up the question of where best to hinge the sash, and the merits of long or short runs—well, the catalog has its say-so on them, too. It is the kind of catalog every grower wants for reference. Drop us a postal and we will send it along.

We make every part of a greenhouse but the glass. We sell any part.

Seed Trade Report

AMERICAN SEED TRADE ASSOCIATION

George S. Green, Chicago, Ill., president; M. H. Duryea, New York, first vice-president; F. W. Bolgiano, Washington, D. C., second vice-president; C. E. Kendel, Cleveland, O., secretary and treasurer; Leonard H. Vaughan, Chicago, assistant secretary.

SEDALIA, MO.—Mr. and Mrs. L. H. Archias celebrated the fiftieth anniversary of their marriage with a card party at their home on Friday of last week. Many friends were present and a very enjoyable evening was passed. The home was beautifully and appropriately decorated for the occasion.

OKLAHOMA CITY, OKLA.—The Farmers' Congress has adopted resolutions favoring a parcels post, development of waterways, agricultural and horticultural departments in all public schools, favoring state control of common carriers, but opposing the distribution of free seeds by the government.

BROOKLYN, N. Y.—Wm. Kroemer, seedsman, dealer in implements, etc., at 1464 Flushing avenue, reports the present season one of the most active in the seven years he has been in business. He supplies the market gardeners on Long Island, Staten Island, and elsewhere with seeds, and says a brisk demand has already set in for celeriac, of which he has an excellent strain, a statement testified to by the fine specimens of this product recently seen.

THAT VENERABLE GRAFT known as the free seed distribution is supposed to attach the agricultural voter to his Congressman by hooks of steel—a small steel, it may be, but nevertheless a raid upon the Treasury. But the National Farmers' Congress meeting in Oklahoma City condemns it. J. Sterling Morton, Secretary of Agriculture in the Cleveland Cabinet, was denounced in Congress for trying to end this petty bribery of the rural voters, as though he were an enemy of his country; but the farmers are getting around to his side, and the politicians had better take notice of it.—Philadelphia Record.

IMPORTS OF SEEDS, ETC.—H. H. Berger & Company, three cases plants; H. Frank Darrow, 47 cases plants; Wm. Elliott & Sons, one case plants; Huns & Company, eight cases plants, 154 tubs laurel trees; W. Hagemann & Company, 75 cases plants; Kramer & Foster, 24 tubs laurel trees; August Rölker & Sons, 40 cases plants; Charles F. Meyer, 30 cases plants; McHutchison & Company, 47 cases plants, 30 tubs laurel trees; Charles F. Meyer, 61 cases plants, two tubs laurel trees; Maltus & Ware, 285 cases plants, four tubs laurel trees; Smith & Bolzenthal, 66 cases plants; Charles D. Stone & Company, 14 cases plants; J. Ter Kuile, 12 cases plants; Vaughan's Seed Store, 31 cases plants; R. J. Godwin's Sons, 17 bushels seed, 71 bags seed; McHutchison & Company, 31 cases plants; Maltus & Ware, 163 cases plants, two cases flower roots, one barrel bulbs, eight cases bulbs, 17 cases trees and shrubs; P. Onwerkerk, 22 cases trees; P. H. Petry & Company, 15 cases plants; T. C. Pollock, 17 cases plants; Richards & Company, three cases bulbs, 10 cases plants; Julius Roehrs Company, three cases plants; Rooney & Spence, seven cases plants; C. B. Richard & Company, 20 cases plants; W. H. Smallwood & Company, 10 cases plants; C. D. Stone & Company, 21 cases roots; J. M. Thorburn & Company, five cases plants; Vaughan's Seed Store, two cases trees, four cases bulbs.

October 26-27.—New York & Cuba M. S. S. Company, one case plants; In-

BURNETT BROS., Importers and Growers

101 West Street, NEW YORK

Prices Advertised in these Columns are for THE TRADE ONLY—When Writing Please Mention THE FLORISTS' EXCHANGE.

Mangel, choicest qualities poor and probably of weak germination; coarser kinds are satisfactory.

Onion, general outlook good, but late crop.

Parsley, both curled and turnip-rooted, short.

Peas, round, early, small crop; later good. Marrow, early varieties, medium; late, bad.

Radishes, good to very good.

Spinach, Winter-grown, a failure; Spring-sown, average crop. Stock used up.

Turnips, insignificant crop.

Swedes, practically a failure.

The latest reports on flower seeds shall follow next week, but such weather as we are now enjoying must play havoc with late asters and marigolds.

EUROPEAN SEEDS.

ROEMER'S NOVELTIES.—The 1908 novelties in flowers of Frederick Roemer, Quedlinburg, Germany, include early and large-flowering cosmos, white, rose, crimson; double hybrid ever-blooming hollyhocks; *Petunia hybrida grandiflora fimbriata fl. pl.*, Concordia; several new primulas, Pansy Giant Victoria; also a number of new things in asters. The firm's list of novelties has been issued.

Burpee Dines Postmaster-General Meyer.

Two hundred representative Philadelphians, with a sprinkling of business and professional men from other cities, applauded Postmaster-General George von L. Meyer Saturday night last at the Union League, Philadelphia, Pa., when he explained at length his program for the extension of the parcels post; the installation of special parcels post on rural free delivery routes, and the establishment of postal savings banks.

The Postmaster-General was the guest of W. Atlee Burpee, for many years an advocate of postal reform and improvements. Oratory followed an elaborate dinner in honor of Mr. Meyer, each of many speakers, with the single exception of Senator Penrose, striking a hopeful and at times an enthusiastic note.

The dinner was held in the main banquet hall of the Union League. The tables were arranged as they were at the famous banquet in honor of Prince Henry of Prussia. Autumn leaves, chrysanthemums, roses and palms were blended in the decorations, while electric chandeliers on the tables and in special wall designs added to the brilliant scene. Screened by palms, an orchestra played throughout the evening, and in every detail the dinner and service upheld the traditions of the Union League.

The Postmaster-General reached the city late in the afternoon and was met at the station by Mr. Burpee.

Mr. Burpee, as host, sat in the center of the long table. The Postmaster-General was at his left and Senator Penrose, chairman of the Senate Committee on Postoffices and of the Joint Committee of Congress for Investigating the Business Methods of the Postoffice Department, was at the right. Sitting next to General Meyer, on his right was W. W. Potter, for-

mer minister to Italy, a post since held by Mr. Meyer, the two being intimate friends. Two seats away sat John Wanamaker, a former postmaster-general and himself an advocate of parcels post and many other reforms in the postal service. A letter of regret had been received from still another former postmaster-general, Charles Emory Smith, Philadelphia having furnished two holders of this portfolio within recent administrations. Representatives Moon and McCreary sat side by side at the left of Senator Penrose.

Mr. Burpee, in introducing Postmaster-General Meyer, referred to the need of postal reforms and declared that one law, at least, under which the department was conducting business dated from 1792. "That is too far back even for conservative Philadelphia," he declared, amid laughter.

Prolonged applause greeted Mr. Meyer when he arose to speak. In the course of his remarks he said:

What I am attempting to do is to abolish an injustice, and one might even say an un-American practice. I refer to the policy of charging our own people 16 cents a pound, with a weight limit of four pounds, while giving a rate of 12 cents a pound and a limit of 11 pounds on packages destined out of the country to 22 foreign countries. Consequently I shall recommend the same rate and the same limit of weight for parcels, whether intended for points in this country or abroad, which means a reduction of 4 cents a pound and an increase in the maximum weight to 11 pounds. This certainly is only equitable.

"Heretofore the opposition to the extension of the parcel post has come in the first instance from the express companies, and then from the retail merchant and the country storekeeper, the fear in his case being that the mail order house would derive a benefit, to his own disadvantage. Now, I can disarm the criticism of the retail country merchant and storekeeper by the fact that I shall recommend a parcel post system on the rural delivery routes, a special rate to be charged on packages for delivery from the distributing office of the rural route, or if mailed by a patron of any rural route for delivery to a patron on the same route, or at the distributing office of said route. The rate would be five cents for the first pound and two cents for each additional pound up to 11 pounds. This will be a great boon to the farmers and others on the rural routes, because when they are able to order their goods by telephone or postal card it will relieve them of the inconvenience of going to town to obtain the necessities of life.

"It will facilitate the consumption and increase the business of the country merchant, who necessarily obtains his goods from the wholesale dealer. Therefore, all will be benefited. The result of this service will be an increased cancellation of stamps which, in turn, means an increase of salary to the fourth-class postmaster, as well as a larger revenue for the postal service, which could be credited to the rural delivery routes, as it would be practically all pure gain over and above the commissions to the postmasters.

Senator Penrose said one of the principal drawbacks in the Postoffice Department was the frequent changes of administration. "There has been a long line of Postmasters-General, two of them from Philadelphia. Had those two been able to stay there to carry out their policies, there would be a different story to tell.

"In the first place, there must be permanency in the administration of postal affairs. But few Postmasters-General remain in office for more than one or two years. Consequently there is little continuity of purpose. It has been suggested that a superintendent be established, to hold the office for a long time, which would go a long way in helping the service."

A greater extension of the country's rural free delivery service, the collection of mail in big cities every fifteen minutes, and the adoption of a two-cent foreign postal rate, the world over, was advocated by former Postmaster-General John Wanamaker, the next speaker.

Referring to the two-cent foreign postal rate, championed by him, Mr. Wanamaker said that if necessary he would willingly be one of five men who would give bond to make good any deficit that might exist after five years, if the United States postal authorities would but experiment with the lower rate.

Postmaster-General Meyer left Philadelphia for New York at noon, Sunday, after enjoying an automobile ride about the park and through the suburbs with Mr. Burpee, who had been his host while in Philadelphia. Mr. Burpee took his guest to Fordhook Farms, near Doylestown, where they had luncheon. Postmaster-General Meyer expressed himself as greatly pleased with his reception in Philadelphia.

Among those in the trade present at the banquet were: Messrs. W. Atlee Burpee, Robert Buist, Robert Craig, William F. Dreer, Howard M. Earl, Herbert W. Johnson, Burnet D. Landreth, William Henry Manle, William J. Stewart, Alexander B. Scott, Walter P. Stokes, Henry W. Wood, S. F. Willard and Clinton R. Woodruff.

Scheepers' Lily of the Valley.

The illustration herewith shows the trial house of John Scheepers & Company, New York, in which they test the different kinds of lily of the valley before distributing the stock to their customers. They state that the best pips handled by them come sometimes from Hanover and Wittenberg—at least those for early forcing—and those for late forcing from Neuenamme. Only the best pips are handled by this concern. They state that fresh pips should not be used for early forcing until after Christmas, and until that date cold storage lily of the valley. Their experience has been that the best pips for early forcing come from Hanover. If it is desired to force fresh pips for Christmas blooming, they should be planted not later than the end of November to get good results. The early Hanover pips are grown in good, sandy soil.

They further state that when forcing fresh lily of the valley very early, one must calculate on a loss of from 15 to 20 per cent. The later the fresh pips are forced the smaller will be the loss. The most essential matter in securing good lily of the valley blooms is to purchase the right kind of pips; pay a good price for them rather than handle cheap stock.

This firm reports its sales of lily of the valley very much increased, and that the average grower of this class of stock is always willing to pay a good price for the pips in order to secure the very best. The concern has engaged the services of one of the best forcers of lily of the valley in New York, a man who has had experience in this work for several years with Thomas Rochford of England.

CATALOGUES RECEIVED.

SLUIS & GROOT, Enkhuizen, Holland.—Price List of Vegetable, Flower and Agricultural Seeds.

EDWARD H. RUST, South Pasadena, Cal.—Illustrated Catalogue of Palms and other Decorative Plants, Trees and Shrubs, Roses, Bed and Border Plants, Ferns, etc.

JOHN F. SNEED, Tyler, Texas.—Wholesale Price List of Fruit and Ornamental Trees, Small Fruits, Evergreens, Roses, etc.

SWAIN NELSON & SONS COMPANY.—The Glen View Nurseries, Glen View, Ill., office, Marquette Building, Chicago.—Wholesale Catalogue and Price List of Hardy Trees, Shrubs, Roses, Evergreens, Vines, Fruits and Herbaceous Perennials.

ASSOCIATION "FLORA," Boskoop, Holland; American representative, P. Ouwkerk, 216 Jane street, Weehawken Heights, N. J.—Nursery Trade List of Roses, Clematis, Herbaceous and Decorative Plants, Azaleas, Shrubs, etc.—A very complete and interesting catalogue.

NATHAN SMITH & SON, Adrian, Mich.—Preliminary List of Chrysanthemums for 1908. The wrapper enclosing this useful booklet bore the significant request, "I am full of Chrysanthemums; take me to the shows." The firm has left every alternate page blank on which memoranda concerning the listed varieties seen at the exhibitions may be written.

JULIUS ROEHRS COMPANY, Rutherford, N. J.—Circular concerning the new Rose, Newport Fairy; beautifully illustrated, showing a spray in color, and other pictures. The firm says: "We have given Newport Fairy a fair trial at our nurseries, and we can thoroughly recommend the variety for planting or as a pot plant for Easter forcing." The illustrations give a very good idea of its great floriferousness.

NURSERY DEPARTMENT.

Conducted by Joseph Meehan.

AMERICAN ASSOCIATION OF NURSEYMEN.

J. W. Hill, Des Moines, Ia., president; C. M. Hobbs, Bridgeport, Ind., vice-president; George C. Seager, Rochester, N. Y., secretary; C. L. Yates, Rochester, N. Y., treasurer.

NATIONAL NUT GROWERS' ASSOCIATION.

The annual meeting of this organization, held recently at the Jamestown Exposition, was a great success. A feature of great promise is the plan being formulated for work at State experiment stations. This is to be actively taken up through the State vice-presidents, some of whom have already made substantial progress in organizing co-operative work.

The next convention goes to Chattanooga, Tenn., on a date to be fixed by the executive committee, which will permit nuts of all kinds to be exhibited to the best advantage. The annual dues are \$2; life membership, \$20. J. F. Wilson, Poulan, Ga., is secretary.

Publicity Needed for Pomologists.

The subjoined communication recently received by Professor H. C. Irish, St. Louis, Mo., secretary of the National Council of Horticulture, is self-explanatory, and demonstrates the faith that one fruit grower has in the effectiveness of the publicity service rendered by the organization referred to:

Dear Sir: It occurs to me that we, as fruit growers, are not giving sufficient attention to the matter of keeping the people informed as to the desirability of making fruits an important part of their daily food. In other words, we need an acting bureau of publicity.

This season we do not realize the necessity of this, but if this lean season should be followed by one of plenty, which will probably be the case, we may find that the people who have from necessity been sparing in their use of fruit this season will continue to use it sparingly, to the great loss alike to producer and consumer.

In working for our own selfish interests, in this case we are also doing a great good to the public at large.

It seems to me that your national organization should take up this matter and bring it before the state societies at their annual meetings this Winter.

Yours truly,

W. W. FARNSWORTH,
Secretary Ohio Hort. Society.

The True Sweet Shrub.

Unless in some old garden, it is almost impossible to procure the true sweet shrub, *Calycanthus floridus*. The one common everywhere nowadays, which has been and still is sold by many for the true sweet shrub, is *Calycanthus laevigatus*. Were it not that it lacks the odor of the true sort it would make no difference, for it forms a shapely shrub, blooms freely and is hardy. But the odor of the flowers, though not lacking, is not nearly as pronounced as in those of the true *floridus*. When one is offered a lot of *calycanthus* seed or seedlings as *C. floridus* he may be sure it is not true, for the latter rarely seeds, while the less worthy one, *C. laevigatus*, seeds freely.

The true one is propagated by root cuttings and by layers, chiefly; and it is such a desirable shrub that it would be well worth increasing largely by those to whom a quantity of roots is accessible. Cut into small lengths and placed in bottom heat in a greenhouse in late Winter should see a supply of young plants by the time to set out stock in Spring.

New Ailanthus Trees.

European nurserymen are listing two new species of ailanthus, one called A. Giraldi, the other A. Vilmoriniana. From the descriptions of them it would appear that the larger leaves of the new ones constitute the main difference, together with a greater number of leaflets.

There does not seem any room for more ailanthus trees, unless sorts were introduced that would not sucker and that would have flowers of a pleasant odor. As it stands to-day, the *Cedrela sinensis* is filling the place the ailanthus did. In general appearance it is much like the other, while less inclined to sucker, and it has flowers with no objectionable odor whatever. It has been in cultivation in many of our private and public gardens for many years, in which time the trees have reached large proportions and they show their habit to be more round-headed than that of the ailanthus.

Mentioning suckering, it should be understood that the worst of suckering trees will not sucker if their roots are not injured. Mice and ground moles break the roots, or they are broken by forking or digging about them, and then a sprout appears from the broken parts. Where undisturbed on lawns, there are no suckers.

The Useful Honeysuckle.

There are but few dwellings that do not find the honeysuckle of use about them. Hardly a garden

can be found without one or another of the various species appearing in some part of it. When florists and nurserymen are asked what vines they sell most of, the honeysuckle and *Ampelopsis Veitchii* are always among the first named.

It would be difficult to name a vine more useful than the honeysuckle, because it fits all positions that any other vine not of a clinging nature does. Then there are its handsome green leaves, evergreen in some species, and its flowers, which are produced really from Spring until frost comes.

No matter which climbing one it is, its foliage is always fresh and green even after nearly all trees and other vines have shed theirs, and one kind, the Japanese evergreen, as it is called, is a true evergreen except in severe climates. At this season, November, it is common to see the honeysuckle fresh and green in places where it was hardly known to be. Growing perhaps in connection with some other vines or shrubs which have now lost their leaves, the honeysuckle is now uncovered and provides a cheering sight in its garb of green. In our wildwoods where perhaps a cutting or a plant has been thrown at some time, there are now to be found great

claim is for this new one. It is a grand shrub whatever it may do in the way of perpetual flowering.

JOSEPH MEEHAN.

THE FRENCH NURSERY FEDERATION.

Though the movement in favor of organization in the French nursery trade is comparatively recent, it has been taken up with enthusiasm, and is already producing important results, some of which will, without doubt, have an effect upon our own trade.

We are very pleased to see that one matter has received attention which has been the cause of much ill-feeling, and would, if not stopped, have probably led to serious results in the near future; we refer to the practice of certain French firms sending wholesale lists to retail buyers in this country. In consequence of representations made on this subject, M. Rene Barbier, Secretary of the Orleans Association, announces that it has been agreed by every nurseryman in that district publishing a catalogue, that for the future there shall be a difference of at least 25 per cent. between wholesale and retail lists, with exception of a few forest trees, which, as certain lists were already printed, and could not be altered for this season, will carry a difference of

Bedding in Carroll Park, Baltimore
Croton Bed, Bordered with Scroll of Fine Varieties of Alternanthera and Echeveria

patches of honeysuckle, and these, too, are now prominent objects as the woods are visited.

The best evergreen one is, as said, the Japanese, known as *Lonicera brachypoda*. The *L. Halleana* is a fair one, but it loses its leaves before Spring; so does the Chinese, the one with reddish leaves.

In a way, all these honeysuckles are of a cream white color when open, but the Chinese is pink in the bud, showing cream color when the flowers are expanded.

Hydrangea Arborescens Sterilis.

The following letter, dated October 15, 1907, has been received from E. Y. Teas, relating to the ever-blooming character of this new hydrangea:

"I send you a small plant of the new hydrangea, to show you how they behave with us. We have others of the same character. I wish you could look over our blocks showing thousands of blooms and buds, still in fair condition, even though we have had ice on the water for several mornings."

The little plant reached us safely. It was a young plant, set out last Spring, we presume, and it showed one flower head past its prime, another one in perfection, and a third just in bud, the last one too late to expand before cold weather.

We have also received the following letter from J. W. McNary of the Xenia Star Nurseries, Ohio, dated September 28, 1907:

"Referring further to the *Hydrangea arborescens* var. *sterilis*, I would say we now have in our nurseries a number of plants in bloom and will have until frost, but they are young plants, that have been producing new wood naturally much later than the matured plant, and the tendency is to flower whenever the terminal bud is formed, no matter at what time in the season that may be. A nurseryman, not familiar with the habit of the matured plant, might be led to suppose it was a so-called perpetual bloomer, but no one familiar with the natural habit of the matured plant will make such a claim.

In nursery collections here the typical *Hydrangea arborescens* is a well-known shrub. It bears but the one crop of flowers just as other hydrangeas do. By setting out plants late, or by cutting them down when the shoots are half grown, late crops of flowers are had, but the same plant does not bear successive blooms through the season as we understand the

15 per cent. for this season only. This decision has been communicated to the Angers and Ussy districts and adopted by them.

The Lyons branch has taken similar action, with the rule that no trade lists shall for the future be sent to landed proprietors and other private buyers. It is very pleasant to us, having strenuously advocated the advantages of organization and co-operation in the nursery and seed trades for many years, to see that at last the movement has not only taken firm root here, but is now being warmly taken up in France, Germany, and other continental countries. Our American cousins, with their well-known business acumen, are, of course, years ahead of us in this important question.

Our French confrères have already tackled the thorny question of prices, and the Paris district has decided on a general rise of 10 per cent. upon previous retail lists. The Lyons district has gone for 20 per cent., and has got out a schedule of minimum prices for the guidance of its members. We here in England have so far funk'd this question, on account of its attendant difficulties; but now that others have set us a lead it may come to the front and be tackled by our Association.—Horticultural Advertiser, Eng.

FREDONIA, N. Y.—The premature explosion of a stick of dynamite seriously injured Louis Roesch, his son Milton, and his uncle, Matthew Roesch of Sheridan, on October 14. The accident occurred while the three were letting the dynamite down into a gas well, where it was to be exploded, to clean out the well. Louis Roesch was painfully injured about the face and eyes. He was taken to the Dunkirk hospital, where an eye-sight specialist is in charge of the case. It is impossible to tell how serious the injuries may prove, but it is feared that he may lose the sight of one or both eyes. Matthew Roesch was cut in the face by a piece of rock or broken pipe, and Milton Roesch was less seriously injured. It is thought that the explosion was caused either by the use of too short a fuse, or by a defective fuse which burned too rapidly.

(65) Propagation of Hardy Phlox.—Please tell me when and how hardy phlox may be propagated from root cuttings, and which will make the best stock—top or root cuttings. Ohio. R. P. D.

—Hardy phlox may be propagated by dividing the roots in Autumn or very early in Spring. It is not too late to do the work now, provided the land has not become too sticky through rain or frost. The phlox may also be propagated from top cuttings in late Spring. Put the cuttings in sand in a frame, and if shaded a few days, they root very easily. Equally good plants can be produced from the cuttings mentioned as by division of the roots in Autumn or early Spring.

(66) Brown Scale on Phoenix.—Would you please tell me what kind of insect, or fungus, as it appears to me, is on the enclosed phoenix leaves. The palm has been outside all Summer, and the trouble seems to attack the outside leaves first. W. M. Mass.

—The palm leaf sent for examination was affected with the common brown scale, which can be easily removed by a few vigorous syringings with some tobacco extract. If there are only one or two plants to be taken care of, the scale can be removed by sponging each leaf thoroughly with soap suds, but if many plants are affected, that operation would be too tedious, and the tobacco syringing could be done more quickly.

(67) Storing Bay Trees.—Will it harm bay trees to keep them over Winter in a temperature of 55-60 degrees at night? VIRIDIS.

—Bay trees keep best through the Winter in a temperature of about 45 degrees, and if circumstances are such that they have to be kept in a temperature ranging from 55-60 degrees at night, they will have to be carefully attended to in regard to watering and syringing. If they are allowed to get too dry, they will soon get full of red spider and lose their foliage, which would render them utterly worthless by next Spring.

FERNS

Adiantum Croweanum
3-in. pots, \$12.50 per 100, \$100 per 1000.

Adiantum Cuneatum
4-in. pots, \$1.80 per doz., \$15.00 per 100.

up the same evening, President Stephens, who has served his club so efficiently ever since its organization, declined a renomination and Vice-President R. A. Currie, who has also been one of the reliable wheel-horses, was promoted to the vacancy. The members would not listen to James McKellar's suggestion that it was time for a change in the office of secretary, but insisted on re-electing him by acclamation. They also suspended the rules on the following last year's officers: Treasurer, Jacob Reichert; Sergeant-at-arms, J. H. Williams; trustees, Messrs. Woodrow, Knopf, Drobisch, Brust and Bauman.

The club adjourned for a little practice at their favorite bowling alley. Considerable interest has been aroused in the game by the lining up of two rival teams, the married vs. the single men.

ROSES

The season thus far has been a very favorable one for the rose grower. The plants have had a splendid chance to make a strong, robust growth, and should be producing some very good blooms. As chrysanthemums are now very plentiful the prices realized for roses are often small compared with the quality of the stock. It will pay, therefore, to go carefully over the houses and disbud all the weaker plants, thus affording them a better chance to catch up with the others.

Watering must now be watched still more carefully, for, if overwatered, the hedges will not dry out for a long time, especially if the plants are off crop. It is a good plan to let the plants, if in this shape, get almost dry and then give them a good soaking. This is far preferable to giving them a little at a time and never soaking the hedges through to the bottom.

Give all the air possible at all times; even at night it is proper to leave on a crack of air.

Do not let greenfly put in an appearance; a light fumigating with almost any of the nicotine paper on the market will keep the houses free from this pest at a small outlay, and little work; but if you wait till the creatures hang around in strings, no amount of smoking will really clear them out.

The soil for next season should now be prepared, and here again it pays to get the best. Use nothing but good, stiff sod. Build the heap of desired size, in layers, alternating with fresh cow manure, if obtainable. If the sod is from each layer will help sweeten it. Some

low land, a light sprinkling of lime to prefer to wait till Spring to prepare their soil, but more time is at our command now, as there is no young stock to look after; then it is easier to get the teams, and the soil is apt to be in better shape, so it will be found much easier to put up the heaps in the Fall.

Potting soil should also be placed in some dry, convenient place, where it can be got at next February and March. It is a pleasure to note that very few growers put it under a greenhouse bench.

A good night fireman is a valuable acquisition on any moderate sized place, for no matter how well the houses are watched and the plants looked after during the day, unless an even temperature is maintained all night the results will be anything but good. A man, therefore, that is entrusted with the place at night should be trustworthy in every respect.

PENN.

Treatment of Grafted Roses.

How should grafted h. p. roses be treated, potted, pruned and forced into flower to have some for Easter, some for early Spring sales and some for Decoration Day? Room is scarce. Can those for late sales be potted, plunged outside until some time in, say, late in March, and then brought in and successfully forced? All information as to soil, manure, etc., will be thankfully received by

ROSES.

Hybrid perpetual roses that are intended for forcing in pots should now be in these pots; if not, they should be put there at once, using a compost the same as is given roses in benches—about one-fourth or one-fifth of decayed cow manure to one part of good stiff sod, to which, just before using, bone meal at the rate of a six-inch potful to a wheelbarrow load of compost, has been added. After potting, water thoroughly to settle the soil, after which the plants can be stored almost anywhere, where severe freezing does not occur, so that the plants may form a mass of new roots. This is the most important part of the work, for if not well rooted, poor results will follow. When the plants are wanted for blooming they should be started slowly in a temperature of not over 50 degrees. They should be syringed frequently and kept just moist until well started, after which they will require more liberal treatment. A watering with sheep manure, weak at first, will produce fine dark green foliage. For late sales the plants will do very nicely left outdoors (protected), and started in March. Remove all suckers which the plants may produce, also all weak growth to good strong eyes.

PENN.

Saratoga, N. Y.

Christian Dehu, the Beekman street florist, spent the greater part of the Summer in Germany, where he went on a business and pleasure trip combined. Mr. Dehu was busy getting his greenhouses in shape for Winter, and reports business good in all lines.

John Ralph has also had a touch of the building fever. A fine house of carnations was pointed out as the result of the season's work. The new house is extensive and of best material and workmanship. The plants were looking well and will produce a large crop of blooms to follow up chrysanthemums now being cut. Mr. Ralph reports business good and although busy in the general run of his trade always finds time to extend his buildings and enhance his property valuation as well as keep his establishment at all times attractive and interesting to visitors.

T. J. Totten has the largest area of glass at this fashionable resort. He is an extensive grower of all stock for Winter blooming as well as a large line of stock for Summer display. During the Summer season Mr. Totten disposes of most of his stock on the local market that at a certain period each season takes a large amount of stock to supply. The remainder of the year the stock from the Totten greenhouses is wholesaled to the florists in the numerous other towns within easy reach of Saratoga.

Henry Schrade's place on Nelson avenue is a model of neatness. The new office building is quite attractive. A 250x30 foot house of carnations was looking well. The plants had an early start and cutting was in progress. Mr. Schrade has a small collection of orchids now coming into bloom. J. M.

THE Cultural Leaflets treating on BULBS are especially seasonable at this time.

Seedsmen and Florists who sell BULBS at retail should procure a supply of these LEAFLETS, and present one to each customer. Do this, and each purchaser will be enabled to grow the BULBS intelligently; in this way you make a satisfied customer, a result always to be desired.

CULTURAL DIRECTIONS

Specially written for the use of your amateur customers. Send Twenty-five cents for complete sample set, which amount will be deducted from order for first thousand.

The universal favor in which these Directions are held, as shown by the many orders received therefor, encourages us in the belief that these Leaflets are just the neat little factor to help promote business and establish better relations between the dealer and his customer.

TRY SOME!

BIG BUSINESS ASSISTANT

TO SAVE TIME, QUICKEN SALES, AND AID YOU
PLEASE YOUR CUSTOMER, WE HAVE PREPARED

Cultural Directions

COVERING A NUMBER OF THOSE PLANTS
AND BULBS MOST LARGELY IN DEMAND

THE "CULTURALS" have been written by experts; they are fuller, and contain more detailed directions than it is possible to embrace in a catalogue. Equipped with these, just hand one out with each sale, and save yourself considerable present and future trouble, as the customer will then be able to consult the directions, grow his plants, seeds or bulbs intelligently, and so receive satisfactory results, without having to continually resort to you for advice.

The following "Culturals" are now ready:

CHRYSANTHEMUMS

Notes for Week Ending October 26.

Lanona has been watched with deep interest as it has come up into bud and bloom. It is just right in height and foliage. The flower is large and massive, beautiful in form and pure in color. That ever-present notebook had a lot of crosses indicating its value, and each time we viewed the variety we added one more; finally it was harvested on the 20th, and put into a deep tub in the cellar. It wilted; the stem was cut, but it continued to wilt; it was finally cut back to 18 inches, and still refused to take up water, proving a total failure. The note "Plant 1000 Lanona" was scratched out; but I leave it to the trade if an American commercial ought to act in that way.

Near Lanona stands Moneymaker, a beautiful white, and, we hoped, appropriately named, although it had crossed the water. Like its neighbor, it seemed to promise commercial perfection, but at the time that it should be finishing up, its lower petals have withered, while the grand center is still far from ripe. This may be partially due to local conditions, but caution suggests only a few of the sort for 1908.

Near at hand is our old favorite, Mrs. Henry Robinson, in all its purity of color, plumpness of form, nice foliage, and good stem. The writer will never forget the first plant of it to bloom on our place; it stood only 3 feet high, with three perfect flower-nestling like doves in the foliage—on October 16. It caused little chills of pure appreciation to run up and down the spine, for big white blooms had not yet become common in that long past October. And, let's see, that variety was seeded in New Jersey, we believe, was germinated and tested in England, and sent back to this country in a big "set." It would seem that the place of origin has very little to do with chrysanthemum excellence, and while we are all patriotic Americans and bursting proud of our own varieties of roses, carnations and chrysanthemums, the American grower is not caring a continental where his moneymakers originate if only they pay the requisite amount per square foot. Elmer D. Smith has raised so many sterling varieties of chrysanthemums that it would seem unnecessary for him to go out of his way to knock the foreigners; and, going about among our benches, we find quite as many superb varieties among the importations as among the natives. The majority of our exhibition varieties are imported, and running down through the standard commercial whites we find Mrs. Bergmann (French), Clementine Touse (French), Alice Byron (English), Timothy Eaton (Canadian), Jeannie Nonin (French), with W. H. Chadwick (American), to which will be added this year October Frost (American), Mlle. Angele Laurent (French), and Miss Clay Frick (sport, English).

In commercial yellows the Americans predominate, an excellent list from early to late including Monrovia, Robert Halliday, Omega, Colonel D. Appleton, Major Bonaffon and Golden Chadwick; but as Mr. Smith says, Monrovia had been in existence a number of years before Mr. Teilmann (a foreigner!) showed its possibilities, and not nearly all the trade have learned to bring them out even as yet. Then Omega; it has been grown and discarded and tried again. When conditions are right it is grand; but it seems a trifle difficult to get all the conditions right at the same time.

In pink varieties our debt is about equally divided between home and foreign raisers.

As Mr. Smith says, in regard to Monrovia and Omega, it requires time to establish the position of any variety as a money making and popular commercial, and among the foreigners this is true quite as much as of the Americans. Of later years, the French growers conform quite closely to our American ideals as to height, stem, neck, foliage, form, etc., while the English and Australians cater more largely to our exhibition standards, and Mm. Nonin and Calvat, by careful description, make

WIETOR BROS.

CHICAGO

THE LARGEST GROWERS OF CHRYSANTHEMUMS IN AMERICA

And this year our List of Varieties and Quality of Stock was never surpassed. As to Quantity, our crop is estimated at 125,000 High Grade Blooms. All Colors. Prices Right.

We had plenty of Early. We have Plenty of Mid-Season. We shall have Plenty of Late.

Chrysanthemum Stock Plants Now Ready

Our Stock of Roses and Carnations is fully up to its usual Standard of Perfection.

WIETOR BROS.

No. 51 Wabash Ave.

CHICAGO

plain to the grower which varieties belong in either section. And thanks to the discriminating work of the C. S. A., the trade has been saved the labor of testing a great many useless sorts, for very few American "sets" are now being offered, and the C. S. A. scores on the foreigners reduce their trial to only a slight risk as in comparison with a few years since.

I have, above, included Mlle. Angele Laurent among the commercial whites, and feel quite safe in so doing. This variety was introduced last year, after producing a lot of fine blooms and showing no faults. Instead of an October 10 variety, by using a later bud, it is ready October 25, but with a center warranting its developing and lasting a good way into November. It is a white sport of the lovely pink, Dr. Roche, is massive, and of general incurving form, of heavy texture, broad petaled, stiff of stem, and with small, dark foliage. Of its fine points, its quick action from the rooted cutting to the finished flower is not the least, for, other things being equal, this is one of the finest qualities a commercial chrysanthemum can possess. When a variety can be rooted in May, benched in July, and produce three fine blooms to the plant in October, it is a paying sort, sure, and that can be claimed for Mlle. Laurent.

We are very glad, of course, that the variety Mary Mann is upholding its record. May we be pardoned for saying that we believe this to be the very finest big commercial pink in existence for October 20 to November 1. It is an easy doer, with perfect habit, small foliage, and very rapid growth; the shade of color can hardly be improved—a living, brilliant, rosy pink, which does not become livid on any slight provocation. Its form and texture make it a fine traveler.

Coming in at the same date, is Elmer D. Smith's Crocus, which appeals to the heart of the grower on first sight. Sturdy, active, crisp of foliage, 3½ feet high, with a grand globular bloom on top, it shows itself a clipper. The form is compact, but extremely elegant, splendid in size, and the color a lovely shade of pure canary yellow. It is not a Golden Wedding color, but at the same time is far removed from paleness or washiness of tint. We predict that this variety will be grown in large quantity.

Toga, also, which is just finishing, is of fine promise; it is a beautiful companion in white for the yellow Crocus, its habit and general make-up being quite perfect.

The scoring by points as now used by the C. S. A. seems quite beyond criticism, yet in counting scores for

individual reference, the writer always feels like giving full measure for foliage "and then some." I am in danger of being called an Eaton crank, but I never look over a bench of Timothy Eaton without being carried away by the extreme beauty of stem and foliage. You can recall it as you read these notes: the soft, plump stem, which is yet quite rigid; shining leaves, medium-sized and dark, hugging downward close to the stem. Could anything be finer? Then turn to the long list of varieties showing the trace (I had almost said taint) of Carnot blood and compare. Of all the distorted, deformed, uncanny looking objects in the whole plant creation, these Carnot type stems are the worst; they subtract a large sum from the beauty of many of our largest and grandest varieties, by the suggestion in the foliage of something gruesome and contrary to healthy, wholesome plant life. We are thinking, another year, of planting all of this type together, as they seem to require much more careful feeding than other sorts.

While not so repulsive in appearance as the Carnots, the varieties with very large, overlapping foliage, are far from desirable, for, in addition to the appearance of coarseness, they require much more space to a bloom than the sorts that approach the Eatons in habit, and results must be quite beyond the ordinary to make the general grower willing to give them room.

Among the novelties of the year, seen for the first time, are a very few (up to October 25) that are really fine and distinct. Glitter shows up well. The color is absolutely satisfying, a deep golden yellow of rosette form, which promises to take on a fine depth. And Harold Wells, a perfectly enormous white, which is yet not coarse in appearance. These are two Wells-Pocket varieties and promise to uphold the record of this famous partnership.

Mrs. W. Wells, an English variety, is the most astonishing color in the family—a brilliant shade of tawny reddish orange that dazzles the eye; and Mrs. Harold Wells, deep blush and globular, quite pretty, but of the "incurved" type, which does not take so well in America.

In M. Calvat's set are three very unusual yellows. Commandant Mathieu is as handsome as anything in the whole chrysanthemum family. The color is that glorious shade of yellow which every one loves; then the petals are broad and long and wonderfully curled, some inward, some outward, and the size is grand; (scored 90.)

Then comes Touring-Club, an immense Japanese incurved, of finely rounded form, big, of course, and of

Orders from unknown parties must be accompanied with cash or satisfactory references.

To the Peony Growers of the United States.

As chairman of the committee on peony diseases, I wish to bring before your attention some lines of work which this committee proposes to undertake during the coming year, and to ask your hearty co-operation in the same.

It is proposed, first, to bring together all the literature bearing upon the subject of peony diseases. This the chairman of the committee expects to complete during the coming year and will present a paper on the subject before the next annual meeting of the society. In connection with this work it is especially desired that all persons interested in peony growing will send to the chairman references to any literature on the subject of peony troubles of which they may know.

Second, we will endeavor to get together all of the observations and experience of peony growers with diseases of the plant. This will include any experiences they have had with diseases, methods of treatment and success or failure of the same. On this point it will be necessary to appeal directly to the grower and it is hoped that everyone interested in the matter will write out briefly and clearly anything they may have to offer and send it to us.

Third, we shall endeavor to get together specimens of the different diseases of peonies for the purposes of studying them carefully and making experiments to determine their cause and methods of their treatment. It is planned to continue this work for a number of years in order that we may arrive at some definite conclusions in regard to the matter. Growers are urged to send in any diseased plants whenever they find them, transportation prepaid. In return for which the chairman of your committee promises to give whatever information he can in regard to the trouble and to prepare from time to time short articles on some common and destructive diseases, that will appear for publication in the proper magazines, etc. These specimens should be carefully wrapped in a box or stout package and mailed directly to our address.

H. H. WHETZEL,
Office of the Botanist.

New York State College of Agriculture, Ithaca, N. Y.

Examinations for Gardeners.

The British Gardeners' Association recently held a conference on the subject of examinations for gardeners, the object being to devise ways and means to bring out at the examinations held by the association the practical knowledge of the candidates. In the discussion that ensued, the ease with which the book taught gardener, so to speak, could excel in written examinations the practical man, whose school education had been, perforce, neglected in his younger days, but who in the more essential parts of garden craft was thoroughly efficient, was commented upon; and the great handicap under which the latter suffered in securing positions, where diplomas or certificates were counted upon as guarantees of capability, pointed out. One speaker stated that he had noticed that very often the most illiterate men were the best workers; at the same time he considered that examinations of the nature of those instituted by the British Gardeners' Association could result in nothing but good, as this test would enable practical gardeners to express their views, and the training would probably enable the men to improve their positions. The chairman, George Gordon, V. M. H., pointed out the great necessity of every gardener acquir-

wants, needs and must have is good service; and a knowledge of what can be rendered in this respect by a candidate for any position can only be ascertained by actual practical test. This, in the case of the gardener, is demonstrated more clearly, in fact, solely, in the garden and greenhouse rather than in the examination room.

Concerning Mr. Gordon's statement relative to the gardener's ability to write "clearly and nicely on any subject," there is no doubt that this qualification has been of mighty good assistance to many a craftsman, whose writings have come before the public, and where the information and instruction he has imparted bore the stamp of proceeding from practical experience. The latter quality in the writing is the greatest essential. There are numerous scribblers, not all Scotsmen, either, who can write glibly on any horticultural topic, who never donned an apron or handled a spade; and, unfortunately for the cause of the craft, these are the individuals most largely afflicted with *cacotheca scribendi*.

The Florists' Exchange has at all times considered it one of its most important duties to encourage the practical gardener and florist, old and young, to express his views on subjects that interest him in writing, for publication. The composition, or good English, is not the main point we take into consideration; just "write as you would talk," and we shall do our best to put what is written in presentable form. The "meat" is what everybody is after, and this supplied from your own knowledge larder is all the more acceptable and nourishing.

The Parcels Post.

It was a notable gathering of representative business men connected with the horticultural trade and other branches of industry that was brought together through the instrumentality and liberality of W. Atlee Burpee, seedsman, Philadelphia, at the Union League in that city, on Saturday evening last, to listen to Postmaster-General Meyer as he outlined his plans for an improvement of the parcels post system in America and cognate subjects. An account of this important affair appears elsewhere in this issue.

While the innovations and improvements desired to be inaugurated by Mr. Meyer may not wholly meet the wishes of the merchants of the country generally, still they are an opening wedge for greater and better things, and as such should receive the heartiest support of all concerned.

It was unfortunate, we think, that through the crowding of the consideration of other matters on the time at its disposal, the S. A. F. O. H. did not, at the Philadelphia convention, pass resolutions endorsing the proposed plans of the Postmaster-General, so far as parcels post subjects were concerned, which had already been promulgated before the date of the annual meeting—although touched on briefly by President Stewart; but it is not too late for the board of directors on its own behalf and as representing the organization to pass such resolutions and forward them to the Postmaster-General. The same method should be followed by the various florists' clubs and all similar bodies throughout the country.

The benefits to accrue from an improved parcels post system, such as Mr. Meyer has in view, are too patent to need further elaboration; and his hands should be upheld by all in his endeavor to obtain from Congress its sanction to the institution of a system that will bring at least some relief from the oppressive and business clogging exactions and demands of the burdensome express service and tariffs.

Chrysanthemum Society of America.

Annual Meeting.

The annual business meeting of the C. S. A. will be held the first day of the exhibition, November 6, at 4 p. m. in the rooms of the American Institute, New York, and it is hoped that the members and the craft in general will avail themselves of the opportunity to be present. A very interesting program has been prepared. Wm. Duckham has kindly consented to read a paper on the "Cultivation of the Chrysanthemum for Exhibition Purposes," and Mr. Totty one on "Single Varieties," which should prove interesting. The exhibition promises to be the best in the history of the society, and no doubt the great show to be held in Chicago next Fall will also form an interesting talk at this meeting.

ing proficiency in the art of expressing himself clearly on paper. A man might cram himself with book knowledge, but unless he submits to an examination, it was of little use. He would, he said, impress the necessity of writing clearly and nicely upon any subject, and "perhaps that was one reason why so many Scotsmen made their way in England, because they were better trained in these matters."

As regards the form and scope of examinations, it was urged by a delegate that one single set examination would be useless. There should be grades for journeymen, foremen and head gardeners, and due credit should be given to the man who knew how to work well, but did not know how to express his thoughts properly on paper. The scope of a useful examination should be written, oral, and practical.

In the matter of selecting examiners it was deemed important that gardeners, and not botanists, should be chosen. "Botany was useful in its way, and added a certain interest to the work of those gardeners who studied it, but it was not essential to the making of a good gardener."

It was explained that no one who was not a professionally trained gardener would be allowed to sit for an examination in gardening before the association, and "the natural result would be that certificates gained in such an examination would be of real value to the holder."

On this side of the Atlantic certificates count for little with an employer in any walk of life. What he

DAVID FRASER, Secretary.

Michael C. Ring.

Michael C. Ring, florist, Quincy, Mass., died at his home, 467 Washington street, Saturday, October 26, 1907, from the effects of an apoplectic shock.

Mr. Ring was a native of Ireland, where he was born in 1830. He came to this country in 1855. For 20 years he had charge of the conservatories of Mr. C. V. Whitten of Dorchester. In 1882 he started greenhouses in Quincy. He made a specialty of cultivating tea roses.

Richard Purdue.

Richard Purdue of East Orange, N. J., died at his home, 25 Burnet street, October 28, 1907. He was 81 years old. Mr. Purdue was a founder of the Munn Avenue Presbyterian Church and also of the Elmwood Presbyterian Church, and until a year ago conducted a Bible class in the latter church. He was born in Athlone, Ireland, and came to this country in 1849. He started a florist's business three years later, which he conducted until he retired fourteen years ago. Two sons and three daughters survive him.

John W. Day.

John W. Day, a well-known landscape gardener, died October 18, at his late residence on Bascombe avenue, second north of Bay avenue, Oakdale, La. He was born in Swarby, near Franklinham, England. During the Civil war he was a member of Company A., Light Artillery, C. A. He leaves a widow, Mrs. Clara Day, and six sons John N., Thomas F., Dennis C., Clarence M., Fred D., and Robt. J. Day and five daughters, Mrs. Fred Gunthorpe, Mrs. Chas. Steiner, Mrs. Daniel Ramsey, Mrs. Clayton Bryant and Mrs. William Hehm, to mourn his loss.

Hugh Chesney.

Hugh Chesney, florist, Farmington, Conn., died on Friday, October 18, 1907, of typhoid pneumonia, after a very short illness. The community loses a man who possessed to the fullest degree the confidence and esteem of his fellow citizens. Mr. Chesney was born in Newton Stewart, Scotland, in 1858, and came to this country at the age of 16. He learned the florist business with Peter Henderson. In 1889 he bought the Lockhardt greenhouses in Farmington, and had greatly enlarged and improved them, building up a fine business. Mr. Chesney was an Odd Fellow, an officer of Evening Star lodge, No. 101, A. F. & A. M., of Unionville, a member of Washington commandery, and Sphinx temple of Hartford. He is survived by a widow and four children, three daughters and one son.

O. B. Hadwen.

Obadiah Brown Hadwen, horticulturist, agriculturist, benefactor, public servant, and one of the most widely known citizens of Worcester, Mass., died suddenly at his home, 60 Lovell street, Thursday, October 24, 1907, of acute bronchitis and heart disease, aged 83 years, 2 months, and 22 days.

He had a national reputation as a scientific horticulturist and pomologist, and that reputation was won through the experiences resulting from years of hard and honest labor.

He was born in Providence, R. I., August 2, 1824, the son of Charles and Amy Sherman (Brownell) Hadwen. He was a direct descendant from John Hadwen, who came from Rochdale, England, in the early days of colonization of the United States and settled at Newport, R. I. On his mother's side he was a descendant of Obadiah Brown, who was prominent in the cotton spinning industry in the early days of America.

Mr. Hadwen attended the Friend's school in Providence and the Clinton Grove Institute in Weare, N. H. He attended the latter school for a four years' course. He also went one year to the Worcester manual labor school. This embraced all his school life, but his youthful training for the walk he chose was obtained on a farm in Worcester.

His home was adorned with trees of his own planting and which were of a varied nature. Trees which were declared to be impossible of growth in this climate

he planted and with care transformed them into hardy growths which added much to the beauty of his home. Many of these specimens are from foreign countries and have been visited by men from all over the United States, who were surprised at and admired the ability of the owner.

For more than half a century he had been associated prominently with many of the larger State organizations for the promotion of agriculture and horticulture. At an early period in the history of the Massachusetts Agricultural Club, Mr. Hadwen became a member, and during all his connection with that society he was one of its foremost workers and advisers. He was its president many years.

He was a prominent member of the Worcester County Agricultural Society, the New England Historical and Genealogical Society and the American Pomological Society.

His standing as an accredited expert on horticulture and agriculture, besides his business ability, won for him a position on the board of trustees of Amherst Agricultural College, and later on the chairmanship of the executive board of the college. He was one of the first members of the board of control of the experiment station at the college and that board's first secretary, a position he filled four consecutive years.

He was president of the Massachusetts Horticultural Society, to which position he was elected in 1901, and for three years he served the society in that capacity with honor.

The Late O. B. Hadwen

The society in which Mr. Hadwen perhaps placed his best work and which received his best interests and assistance, was the Worcester County Horticultural Society. It was owing to his executive ability and rare judgment that the society stands to-day as one of the leading organizations of its nature in the United States. He was made president in 1875 and served one year, resuming his place on the board of trustees. He served the society faithfully in this capacity for twenty years. In 1895 he was unanimously elected president and held the position at the time of his death.

In public life Mr. Hadwen was best known as a member of the board of park commissioners of the City of Worcester. He presented the city with Hadwen Park, one of the prettiest and best arranged parks in Massachusetts. It contains 50 acres, and many of the trees were set out by Mr. Hadwen himself.

He leaves a son and daughter; his wife died in 1901.

A Correction

Editor Florists' Exchange.

The types made me say a queer thing in my notes on the casaurina trees. In the sentence, "While no amount of water at the roots of corn will save it from being scorched by these hot dry winds," the types have it "course," and I have been wondering what interested readers would think of the apparent contradictory statements relative to the beautiful tree.

P. D. BARNHART.

Our London Letter.

BY A. HEMSLEY.

DAHLIAS.—We are now getting well into the Winter season, and with most growers plants are in their Winter quarters. Things were hurried on by the sharp frost we had in September. It is most remarkable how in some districts plants escape, while in others they are killed. Messrs. Carter, Page & Company report that they lost all their dahlias by the first frost, yet when visiting the Royal Horticultural Society's gardens at Wisley on October 10, I found no trace of the frost, and the dahlias were in full glory.

At the shows we see fine blooms, but it is more instructive to see the plants growing. It is remarkable how much the cactus varieties have been improved during the last few years. I took notes of those which were making the most show as well as being distinct in colors; some of the varieties were a mass of flower. I may have missed some good ones, but the following were especially well flowered: Crimson Beauty, Lustre, Oscar, The Honorable Lady Barrington, J. Kolodeest, Mrs. Macmillan, Pearl, Eclair, Yellow Gem, Mrs. Mortimer, White Lady (rather tall), Shrewsbury (dwarf yellow), Princess May, Alice Mortimer, Mrs. Seal, Mrs. J. S. Brunton, Coronation, Acrobat, Harlequin, Pickwick, Standard Bearer, Amos Perry, William Marshall, F. Cohold, and J. H. Jackson.

The pompous and singles were not in quite such good condition, yet at the Royal Botanic Gardens they were very gay; the peony-flowered sorts were making a great show and have attracted much attention from visitors.

THE PERENNIAL ASTERS (Michaelmas daisies) have been well done at Wisley this season. A trial of all procurable sorts has been made. At the time of my visit some were over, but the midseason kinds were at their best. I find many new names are being added since they have become so popular, and it is very difficult to make a selection, but among the newer sorts I have noted Decima, large white, Nora Peters (which gained a certificate recently), Lil Fardel, Hilda Morris, Mrs. S. T. Wright, Thomas Wilkes, Fairfield, Thirza, Miss Southall, Ideal, Delight, Evening Star. For our markets the small-flowered sorts, with loose, branching sprays, are most appreciated and are now extensively grown.

CANNAS are also well grown at Wisley, both in the open ground, and in pots. The collection includes some very fine kinds. Of those I noted, W. Saunders, L. G. Bailey, S. T. Wright, Jean Tissot, Comte de Bouchard, Paul Lorenz, J. B. Vau der Schoots, Hesperides, William Tell, Mont Blanc second, General Merkel, Buttercup, Pillar of Fire. Some unnamed seedlings were very fine. In many English gardens cannas have not proved a great success, but I think that in many instances it has been owing to the plants not being sufficiently established when planted out. I have handled them in various localities and have succeeded except where they have been much exposed, but have found deep digging and plenty of manure to be the greatest factors toward success. When grown in pots, they want plenty of room, and to be kept free from red spider. In a large cool house there is no other class of plants that is more satisfactory; and they may be put away in time to house the chrysanthemums.

The gardens at Wisley are extensive and some portions are not yet properly under cultivation, but where the work has been done it has been done thoroughly.

FRUIT AND SOIL SPECIAL TRAIN.—Arrangements have just been completed for the running of a horticultural and soil improvement special train, over the Baltimore & Ohio, and Southwestern Railroad, in Indiana, about November 19-22, 1907. This movement is the result of co-operation of the B. & O. and S. W. R. R., Purdue Experiment Station and the Indiana State Horticultural Society. The lecturers will be furnished by the Experiment Station and the State Horticultural Society. Stops of one hour will be made at all the important stations, and talks given on the various lines of work.

That part of Southern Indiana through which the train will pass is especially adapted to fruit growing, and an effort will be made to point out ways by which the average farmer can profitably engage in the business. Along soil improvement lines, information will be given on the value and use of commercial fertilizers; in this connection the results of experiments conducted in Southern Indiana will be presented.

The horticultural work will be in charge of C. G. Woodbury of the horticultural department, while the soil work will be under the direction of Professor Arthur Goss.

This train comes at an opportune time, and it is hoped all farmers and fruit growers will plan to meet the train, hear the lectures and receive the printed literature.

Schedules and other information can be had by applying to the Agricultural Extension Department, Experiment Station, Lafayette, Ind.

Water Lilies and Other Aquatics; Their Relation to Horticulture.

By G. V. NASH.

(Concluded from page 562.)

The Lotus.

Belonging to the same family as the water lilies are the lotuses, that from the Old World (*Nelumbo Nelumbo*, or *N. nucifera*), and the representative from the New World (*Nelumbo lutea*). The former is frequently known as the Egyptian lotus, quite another plant, and should more properly be called the Japanese lotus. It was highly prized by the ancients, and was described by Theophrastus as growing spontaneously along the Nile, although not known to occur there at the present time. It is highly prized by both the Chinese and Japanese, and many forms, differing in color, have originated through the latter people. It is one of the most striking features of a water garden, its large peltate leaves, with the luster of satin, standing well out of the water, and swaying in every breath of air, presenting beautiful modulations of green. The large flowers ranging in different forms from the deepest pink to white, add a feature which would be want-

those in which the flowers appear at night. Taking up the day-bloomers first, one of great interest is the blue lotus of the Nile (*Castalia cornuta*), with light-blue flowers. Another and closely related species is the Cape of Good Hope lily (*Castalia capensis*, sometimes known as *C. scutifolia*), also with light-blue flowers. Still another of this day-blooming group is the Zanzibar lily (*Castalia zanzibariensis*), with fragrant flowers of the deepest blue. This is one of the best, a free bloomer and of easy culture. A marked form of this is the variety *rosea*, in which the flowers vary from carmine to pink. Among the hybrids of the day-blooming kinds *pulcherrima* and *Wm. Stone* are of great merit among the blues, while *Mrs. C. W. Ward* is a superb pink.

Among the night-blooming kinds we have the old favorite, and one of the first to attract attention, the Devonshire lily (*Castalia devoniensis*). It originated in the gardens of the Duke of Devonshire, hence its name. It is one of the best, being a free bloomer and of easy culture, with flowers of a brilliant rosy-red and sometimes a foot across. The Egyptian white lotus (*Castalia Lotus*) and the African white lotus (*Castalia Lotus dentata*) are both desirable sorts with white flowers. Another, a hybrid, is *Castalia Sturtevantii*, and very desirable. Its flowers are large and more cup-shaped than is usual in this type of lily. Others which may be used are *Castalia O'Marana*, and a seedling variety derived from it, *Castalia George Huster*.

The Victorias.

If one has succeeded in growing the ordinary tender water lilies, his next ambition is to grow the queen of all aquatic plants, the royal water lily, *Victoria*. This, too, prefers the night in which to open its fragrant flowers, perfuming the air with an odor reminding one much of the pine-apple. Of this there are two species, one growing in the slow streams and lagoons from British Guiana to the Amazon region, and known as *Victoria regia*; the other a native of similar habitats in Paraguay, and called *Victoria Cruziana*, or usually by the much more recent name of *Victoria Trickeri*. The latter, being from a more southern region, and hence cooler, is much easier to grow than the former. For success with *Victoria regia* a temperature of from eighty to ninety degrees must be maintained. For *Victoria Cruziana* success may be assured with a temperature considerably below this, but even then a little heat early in the Summer, particularly if several days of cool weather occur, does not come amiss, and your plant will respond gratefully to this little attention. A noticeable difference in the two species is to be seen in the leaves. Those of *Victoria Cruziana* show the up-turned margin, the unusual feature, almost as soon as they expand from the bud, even very young plants exhibiting this peculiarity. In *Victoria regia* the plant must have attained considerable size before this feature is in evidence, and each new leaf is slower in showing this development. For general purposes, therefore, it is better to choose, at least for the first experiment, *Victoria Cruziana*.

History of the Victoria.

A digression here from the purely horticultural side to the historical may be of interest. The *Victoria regia* was apparently first discovered about the year 1801 by that unfortunate explorer, *Haenke*, who was sent out by the Spanish government to investigate the vegetable productions of Peru. He found it in the marshes by the side of the Rio Marmore, one of the tributaries of the Amazon. There seems to have been no records preserved of *Haenke's* impressions on beholding this wonder of the vegetable world, but perhaps they were like those of Sir Robert Schomburgk, who, on behalf of the Royal Geographical Society, of London, made extensive explorations in British Guiana in the year 1837. He remarks as follows:

"It was on the 1st of January, 1837, while contending with the difficulties that nature interposed, in different forms, to stem our progress up the river Berbice (lat. 4 deg. 30 min. N., long. 52 deg. W.), that we arrived at a part where the river expanded, and formed a currentless basin; some object on the southern extremity of the basin attracted my attention, and I was unable to form an idea what it could be; but animating the crew to increase the rate of their paddling, we soon came opposite the object which had raised my curiosity, and behold, a vegetable wonder! All calamities were forgotten; I was a botanist, and felt myself rewarded! There were gigantic leaves five to six feet across, flat with a broad rim, lighter green above and vivid crimson below, floating upon the water; while, in character with the wonderful foliage, I saw luxuriant flowers, each consisting of numerous petals, passing in alternate tints, from pure white to rose and pink. The smooth water was covered by the blossoms, and, as I rowed from one to the other, I always found something new to admire. The flower stalk is an inch thick near the calyx, and studded with elastic prickles about three quarters of an inch long. When expanded, the four-lobed calyx measures a foot in diameter, but is concealed by the expansion of the hundred-petalled corolla. This beautiful flower, when it first unfolds, is white, with a pink center; the color spreads as the bloom increases in age; and, at a day old, the whole is rose-coloured. As of to add to the charms of this noble Water-Lily, it diffuses a sweet scent. As in the case of others in the same tribe, the petals and stamens pass gradually into each other, and many petaloid leaves may be observed bearing vestiges of an anther. The seeds are numerous, and imbedded in a spongy substance. Ascending the river, we found this plant frequently, and the higher we advanced, the more gigantic did the specimens become; one leaf we measured was six feet five inches in diameter, the rim five inches and a half high, and the flowers a foot and a quarter across."

A lover of aquatics who has seen this queen of water lilies at its best in cultivation can appreciate the feelings of Schomburgk when he beheld this wonderful plant for the first time in all the beauty and novelty of its natural surroundings.

When the existence of this wonderful lily became known to the horticultural world, all were anxious to introduce it. The first perfect seeds which reached England were collected by Mr. Thomas Bridges, and were received at the Royal Gardens at Kew in 1846. The result from these seeds was two plants, which met an untimely end, after giving fair promise of success. Other attempts were made at introduction, both from seeds and from root stocks, but all were unsuccessful. Finally, in 1849, seeds were secured at Kew from parties at Georgetown, Demerara. These arrived in excellent condition, and from them and several other consignments from the same parties about fifty plants were secured. One of these was sent to the famous gardens of the Duke of Devonshire, at Chatsworth. Mr. Paxton, of horticultural fame, was in charge of the gardens there, and to him belongs the honor of having flowered the *Victoria regia* in Europe for the first time, the first flower bud beginning to expand on the evening of November 8, 1849, marking the birth of this flower into the world of horticulture.

Nelumbium Speciosum at H. A. Dreer's, Riverton, N. J.

From Bisset's "Book of Water Gardening."

ing if this flower is left out. It is perfectly hardy and spreads rapidly; in fact it must be checked if its natural enemy the muskrat does not do this unasked, and sometimes too thoroughly. The American lotus (*Nelumbo lutea*) resembles its Japanese relative in general habit, but is far less attractive, its yellow flowers being eclipsed by its more showy rival.

All of the lilies referred to above are of the hardy sort and will withstand the rigors of our Winters, of course with the natural protection of the water around them. There is another large class of water lilies which have been derived from species inhabiting tropical or warm-temperate climes. As the artificial heating of the water, especially during the early Summer and Spring, is of prime importance here, it is necessary to have constructed a tank or pond in which the water supply may be controlled, and the temperature raised considerably above that at which the hardy sorts will thrive. The construction of such a tank or pond is purely a mechanical process, and hardly enters into the scope of this lecture. Provided with a proper tank or pond, however, what shall we put into it in the shape of water lilies?

Tender Water Lilies.

The tender water lilies available for this purpose are divided into two groups, one group containing those flowering in the day time, while the other comprises

Other Aquatic Plants.

In addition to the water lilies, there are other aquatic plants which may be introduced into the collection. The blue water hyacinth (*Piaropus azurea*, commonly known as *Eichhornia azurea*) is a rampant grower, sending out its long stems in all directions. It is a free bloomer, its flowers being borne in large masses resembling in shape those of the hyacinth, hence its popular name. Another is the water hyacinth proper (*Piaropus crassipes*), of evil repute in Florida waters, with a more tufted habit and lavender flowers, and the petioles of the leaves swollen into large spongy organs which serve to keep the plant afloat. The water snowflake (*Limnanthemum indicum*), with its white star-like flowers, and the fairy water lily (*Limnanthemum trachyspermum*), also with white but smaller flowers, are useful. The water poppy (*Hydrocleys nymphoides*) is desirable for its bright yellow flowers, and the parrot's feather (*Myriophyllum proserpinacoides*) is a charming plant, its feathery green foliage forming masses upon the surface of the water. The water lettuce (*Pistia stratiotes*), that odd member of the same family to which our jack-in-the-pulpit belongs, forms floating masses of a peculiar light-green, and is welcome for this reason and for its oddity. All of the above are, unfortunately, tender and require the protection of a greenhouse during the Winter, with the exception of the parrot's feather, which is hardy in water which does not freeze to the bottom.

Enemies of the Water Garden.

Now a word as to the enemies with which one must contend in his water garden. There is no pleasure unmixed with alloy, and the lovers of aquatics cannot hope to escape this general law. He will find enemies on all sides, and these must be met and conquered. Perhaps his worst foe will be the wily muskrat. He may be caught in traps, or if too keen for this one may resort to shooting. The root stocks of these plants seem to be very enticing to him, and this may be especially true of some choice and high-priced variety. He seems to be a connoisseur in such matters, and at times appears to select with unerring instinct the costly plants. The aphid, or green-fly, is sometimes troublesome, and is perhaps best disposed of by their natural enemy, the "lady bird." Syringing and spraying with tobacco water is also effective. Another troublesome pest is the leaf-miner, which makes unsightly furrows in the leaf surface. He can be pretty thoroughly exterminated with kerosene emulsion, applied in the same manner as with other plants. Fungous diseases, if they become troublesome, may be conquered with Bordeaux mixture.

Mr. Nash then showed by photographs the development of the fine water garden of his father, S. C. Nash, at Clifton, N. J., explaining how an old swamp was converted into an attractive beauty spot.

"Through this swamp meandered a brook which had its origin in a swampy woods near by, and on either side gently sloping hillsides rose to the higher ground beyond. My father conceived the idea of developing this as a water garden. A dam was thrown across the lower end, backing the water up several feet. The tussocks were eradicated with the mattock, a laborious and costly operation, and one which experience has now shown can be done much more simply and with much less cost by merely keeping the leaves of the tussocks cut down as they appear at or near the surface, thus drowning the plants out, since such plants must have access to the air to live. The water of the pond thus formed was too cold for the more tender lilies and for the Victoria regia. That these might be grown, a cement pond, irregular in shape, was placed on one of the sloping sides of the swamp, sufficiently removed from the pond to permit the placing of a hot-water boiler between the two bodies of water. In the pond thus made were grown all the tender lilies and the Victoria regia, the latter to a perfection perhaps not surpassed elsewhere. I have spoken of the necessity of concealing the rim with plants in ponds artificially made. Let some of the photographs here reproduced illustrate how this may be done. The heating apparatus was placed in a small shed which was effectually concealed by the planting of vines, giving it the appearance of a mound near the water's edge.

"This site was an ideal one for the purpose, but there are many others throughout the country equally well located. Here the two types of water garden were developed side by side; the one, the transforming of an old swamp into a beautiful lake by means of a dam; the other, the creation of a pond out of a dry hillside by purely mechanical means and artistically concealing the mechanism.

The Usefulness of Water Gardens.

"Let me emphasize not only the beauty of water gardens, but their usefulness also. Old swamps, the breeding places of mosquitoes, and hence the birthplace of much malaria, may be transformed from these pest holes into objects of beauty—may be converted from tangles of bush and briar, and scattered pools of stagnant water, into little ponds or lakes, around whose margins may be grown some of the most beautiful of flowers, and whose waters may be decked with the daintiest and most attractive members of the aquatic plant world."

AMONG THE GROWERS

Robert Klagge, Mt. Clemens, Mich.

Robert Klagge, Mt. Clemens, Mich., who operates about 100,000 square feet of glass and 20 acres of land for the growing of cut flowers only, is one of the heaviest shippers of the Detroit market. While violets used to be the main staple with him, earning for him the title "Violet King" justly, he devotes himself now mostly to roses and carnations. A very promising crop of chrysanthemums is now getting ready for the market, and the contents of the other houses look as if he was to have the best Liberty, La Detroit and Bride roses.

Mr. Klagge is the only one in this neighborhood who grows Dutch bulbs for the wholesale market on a large scale, using close to half a million. Almost all of his product is consigned to the Michigan Cut Flower Exchange, which gives him very good returns.

FRANK DANZER.

The Lifting and Storing of Dahlla Roots.

This is a most important subject, and appears to me, has not received the amount of attention due it by those who write on the subject of dahlias. Personal experiments have been instrumental in reaching the following conclusions:

As usual the first frost, particularly if slight, only touches the upper foliage, flowers and buds, and blackens them; almost without exception another period of fair weather follows and a new growing season starts; this experience is particularly well proven by the present season. A field of dahlias in which the writer is personally interested was touched by the frost fully two weeks ago; part of the field which was especially exposed, seems to have suffered to such an extent that every particle of the plant was blackened. Again, another part of the field was only partially touched and only the upper foliage and open flowers were destroyed, while in some parts of the field, as by miracle, entire plants were saved, while other plants directly next to them were totally blackened. This proves clearly that some varieties are more hardy than others, and are not subject to slight frosts. Since the first frost the weather has been very favorable and rejuvenation has taken place. The plants which were entirely blackened have started entire new growth from the base, and this growth has made such rapid progress that some shoots are two feet high to-day; here and

thoroughly before storing away. It is of the greatest importance that some soil in which the dahlias were grown should remain on the roots, as this in most cases preserves the roots.

Do not cut your roots in the Fall, but allow them to remain just in the shape as lifted until the following Spring.

For storing select a frost-proof cellar, barn or shed, and do not use artificial heat to keep up the temperature unless this is absolutely necessary.

Dahlias keep best in places where the temperature does not vary much from 40 degrees Fahrenheit during the entire Winter.

If floor space is used, put a three inch layer of dry soil or sand underneath the roots and place them in upright position. It is then permissible to fill all empty crevices between each clump and also between the toes of each clump with more dry soil or sand until fully two-thirds of the roots are covered. Above all, do not cover the crown.

Where dry soil or sand is not obtainable, sifted fine coal ashes make a good substitute. When shelves are used the same directions as above may be followed, with the exception that no bottom layer of soil is necessary.

After all the roots are placed as directed above, use a covering of newspaper over the entire lot.

It is advisable to look after the roots once every two weeks, and if any are found which show signs

Field of Asters of R. Klagge, Mount Clemens, Mich.

of decaying it is necessary to remove these at once and also the soil surrounding them.

Be sure that your dahlias are all correctly labeled, and that these labels are attached in such a way that they will not come off easily.—MAURICE FULD in Dahlia News.

A most wonderful variety is Souvenir de Gustave Douzon, which has flowered most profusely the entire season, and since the frost, is producing a most remarkable crop of flowers, remarkable not only on account of quantity, but also on account of perfection and size of blooms; it is without doubt one of the best decorative dahlias, and should be in every collection.

This rejuvenating of growth after the first frost has a most wonderful effect upon the roots. They are only perfected from then on, and in a great many cases entirely new roots are made; the latter is particularly true of such plants as were entirely blackened by the first frost. It is therefore of the greatest importance not to do anything to the dahlias after the first frost has appeared.

It may be well here to mention that in order to produce the greatest number of tubers and the largest clumps, it is advisable to cut back the dahlia plant to within 18 inches of the ground, right in the height of the flowering season. Experiments along these lines will be found most interesting and instructive.

In this period of second growth it is of advantage to those who are anxious to increase their stock of certain varieties to make cuttings, as just the ideal growth for cuttings is then made.

Nothing should be done to the dahlia until a cutting frost blackens every particle of growth; it is then advisable to wait three more days to allow the remaining sap to run back into the roots. Then cut back all growth to within six inches above the surface and try to lift the roots during the sunny hours of the day. After lifting, place the roots upside down alongside the row and allow the sun to dry off every particle of soil which will stick to the roots.

In case it is necessary to lift the roots on a rainy day or during the absence of the sun, or during hours when the temperature is liable to do injury, it is advisable to bring all roots immediately after lifting into safe shelter, and to allow them to dry

of decaying it is necessary to remove these at once and also the soil surrounding them.

Be sure that your dahlias are all correctly labeled, and that these labels are attached in such a way that they will not come off easily.—MAURICE FULD in Dahlia News.

Rust on Hollyhocks.

Rust on hollyhocks has been assigned to various causes, but not until lately have I become convinced beyond a doubt that there exists a remedy for the disease. This remedy consists in the main of what is known as Sulpho-Naphthol, which is a liquid. A tablespoonful of this liquid is put into an ordinary pailful, or nearly so, of water, and then the water agitated, after which the plants affected should be sprayed with this emulsion. More than one application may be required for a complete cure, but cure eventually it will.

Hollyhocks grown during the Winter in a greenhouse where the temperature frequently rises inordinately high, are almost certain to be more or less affected with rust when they are put outdoors in Spring. Hollyhocks should either be planted in the soil in cold frames, or, if it is preferable for the sake of convenience at the time of shipping, in pots or flats. When in either of these they can be kept just as well and perhaps better in frames than in a greenhouse. D. M.

THE CHRYSANTHEMUM SOCIETY OF FRANCE holds its annual congress at Toulouse, November 5, 6 and 7, under the presidency of M. Viger. The following subjects are to be discussed, and medals are to be given for the best papers thereon: Care Necessary in the Production of Chrysanthemum Seed; Means to Employ to Obtain the Spring Flowering of Chrysanthemums; Systematic Efforts in the Application of Manure for Chrysanthemums in the Open Air; Insects and Maladies of the Chrysanthemum; Better Methods of Packing Chrysanthemums, Cut Flowers and in Pots; The Employment of Chrysanthemums in the Decoration and Ornamentation of Gardens and Dwellings; Accidents or Sports, the Means of Producing and Fixing Them.

The foregoing method of our French friends looking to obtaining interesting literature on the chrysanthemum is respectfully submitted to the C. S. A.

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail florist firms advertising under this heading will accept and fill orders for flowers and floral designs forwarded them by mail, telegraph or telephone, the usual commission of 25 per cent. being allowed.

\$25.00, payable quarterly in advance, will entitle the advertiser to a four-line card, under this heading, for one year, 52 insertions. For every line additional to four, \$5.00 will be charged. Four lines will average 32 words; each additional line, 9 words. Each advertiser receives one copy, free, of our Florists' Telegraph Code.

New York.

YOUNG & NUGENT, 42 West 28th St. We are in the theatre district and also have exceptional facilities for delivering flowers on outgoing steamers. Wire us your orders; they will receive prompt and careful attention.

MYER, 611 Madison Ave. My facilities for delivering flowers for any and all occasions are unexcelled. Can give prompt service to steamer and theatre trade. Telegraphic orders solicited. Telephone, 5297 Plaza.

Kansas City, Mo.

SAMUEL MURRAY, 1017 Broadway. I will deliver orders for flowers in Kansas City and vicinity promptly. A first-class stock of seasonable varieties of flowers always on hand. Wire me your orders.

Detroit, Mich.

JOHN BREITMEYER'S SONS, Broadway and Gratiot Avenue. We cover all Michigan points and large sections of Ohio, Indiana and Canada. Retail orders placed with us will receive careful attention.

Denver, Colo.

THE PARK FLORAL CO., 1706 Broadway, J. A. Valentini, Pres. Orders by wire or mail carefully filled; usual discounts allowed. Colorado, Utah, Western Nebraska and Wyoming points reached by express.

Cincinnati, O.

HARDESTY & CO., 150 East Fourth, sell the best grade of flowers grown. Retail orders from distant points for delivery in Cincinnati or surrounding territory will receive prompt attention. Telegraph us.

Dayton, O.

W. G. MATTHEWS, FLORIST, 16 West Third Street. Flowers in any arrangement for all occasions for Dayton and vicinity. Personal attention given to all orders. Long distance telephones.

Dallas, Texas.

LANG, THE FLORIST, the largest flower store in the South. Floral designs and all flowers in season; personal supervision and prompt service in Oklahoma, Texas, Louisiana. Mail and telegraphic orders solicited.

Louisville, Ky.

JACOB SCHULZ, 644 4th Avenue. Personal attention given to out-of-town orders for Louisville and surrounding territory. Have a choice line of seasonable flowers always in stock; delivery facilities perfect.

Indianapolis, Ind.

BERTERMANN BROS. CO. Our facilities for executing orders in an efficient manner are unexcelled. Our shipping territory includes the surrounding states. High grade flowers; expert workmanship.

Albany, N. Y.

EYRES, 11 North Pearl Street, cut flowers or floral designs delivered to any part of Albany and vicinity on telegraphic order. Personal attention given and satisfaction guaranteed.

Chicago, Ill.

HAUSWIRTH, The Auditorium Florist, 232 Michigan Avenue. The quality of our work is of National repute, and we are prepared to execute commissions in first-class style in Chicago and its environs.

Retailers desiring a share of out of town trade should be represented by a card in this column.

FOR THE RETAILER

For reproduction on this page, we solicit from our readers engaged in the Retail Trade, good, clear photographs of subjects that are of general interest, such as store interiors, designs of different classes, new delivery wagons, etc.

A Wedding Decoration.

Autumn weddings have not been particularly numerous, but some very pretty affairs have taken place, and there are several orders booked ahead for the month of November. This, perhaps, is about the best time of year for weddings, looking at it from the florist's point of view. Chrysanthemums are here in large numbers; roses, carnations and orchids are also very plentiful, and prices are particularly low for this time of year.

Autumn foliage plays a prominent part in decorations at this season as was demonstrated at a prominent affair this week. Instead of the large palms that are usually employed for chancel effects, large stumps were erected, the same as are generally used for artificial palms. These were

The lectern was treated somewhat in the same manner, except that *Asparagus plumosus* was used in place of *Adiantum Farleyense*. Two large vases of white chrysanthemums were placed on the altar, the frontal cloth of the same being slightly festooned with *Asparagus plumosus*, with here and there a spray of cattleyas.

A pretty feature of the decoration was the manner in which the pews were treated. Every third pew was decorated on either side of the aisle. A large plant of *A. Farleyense*, with the greater part of the ball removed, was set into low baskets with tall handles; these were placed on the top of the pew and securely fastened with wire. A few long sprays of *Oncidium varicosum* were inserted into each plant, making a very graceful arrangement.

Large hanging baskets of Boston ferns hung from the apex of the arches on either side of the church; these were filled with about a dozen large white chrysanthemums and connected, one to the other, by loose garlands of Bride roses. The supporting columns were draped lightly with wild smilax, no flowers being used.

The bride carried a loosely made bouquet of star jasmine, with a cluster of gardenias showered with narrow silk gauze and jasmine. The bridesmaids, six in number, were given bouquets of pink chrysanthemums; these were made in sheaf form and tied with pale yellow ribbon to match the color scheme of the gowns. The maid of honor carried a basket filled with Killarney roses in full bloom.

Funeral Work.

Some handsome funeral pieces were seen at some of the flower stores this week. A large standing anchor was very handsome; it was filled solid with white chrysanthemums with a base of *Lilium speciosum rubrum*. The ring at the top and the rope depending from it were made of violets; the purple of the violets over the white chrysanthemums was splendid.

A wreath of highly colored pin oak foliage for about two-thirds of its circumference, the remainder of croton leaves and violets, was another good example. A cross of lily of the valley, made all around with a cluster of *Cattleya Dowiana* at the arms, made up beautifully; the base was low and done with growing plants of *A. Farleyense* with a few flowers of the cattleya arranged here and there.

A large sheaf of American Beauty roses made to stand the same as a sheaf of wheat, made an attractive funeral piece. A rope of lily of the valley apparently held it together. The sheafs are made on a wire frame, the idea having been introduced by a leading Fifth avenue florist. They may also be finished by tying with a wide bow of ribbon, or a cluster of orchids.

Bunches of chrysanthemums tied up with Autumn foliage are seasonable. The white varieties may be relieved by clusters of colored roses, or orchids, while the pink and bronze sorts look well with clusters of white roses, lily of the valley, carnations, etc.

D. RAYBUN.

A Familiar Figure on the "Campus"
Do you recognize him?
The Delivery Boy of the Saltford Flower Shop,
Poughkeepsie, N. Y.

filled, to look as natural as possible, with long branches of pin oak, finely colored and arranged on either side of the chancel. Iron stands adjusted to various heights, with plateaux of sphagnum moss fastened at the top, stood here and there among the foliage; these were filled with long stemmed white chrysanthemums, some of the clusters measuring six feet across. No palms were used in the chancel, but large drooping *Nephrolepis bostoniensis*, and *Cibotium Schiedei*, turned on their sides, gave a finishing touch to the groups, and helped to bring out the coloring of the oak foliage.

The pulpit was done with pot *Adiantum Farleyense*; six large plants occupied the top, the whole front being covered in the same manner by suspending the plants with wire pot-hangers. Cattleyas stemmed on long green sticks made a beautiful bit of coloring. They were arranged in thick clusters at the top and brought down the front of the pulpit, so as to form a shower, the soil in the pots being good material for inserting the sticks on which the orchids were stemmed.

GOOD LUCK IN WHITE HEATHER.—Only within the last few years has the florist realized that the white heather of the moors is a plant worth cultivating, but the result of it to-day is that half the people who wear buttonholes at all may be seen with a sprig of this flower, which from time immemorial has been associated with good luck. It is much more lucky, of course, to find white heather than simply to wear it, but the wearer is always supposed to share the good fortune of the finder. Whether it is equally lucky to wear heather that has been grown artificially for sale, is, of course, quite another matter, but the Londoner evidently finds something especially attractive even in the cultivated article or he would not have made it the most fashionable flower of the moment. Certainly it makes a most attractive buttonhole, but one fancies that sentiment has a good deal to do with the white heather's universal popularity.—The Pall Mall Gazette, London, Eng.

KANSAS CITY, MO.—The local press is enthusiastic over the handsome character of the new delivery wagon of the Alpha Floral Company, which that concern has just purchased from the Columbus (O.) Buggy Company. The vehicle represents the best construction, appropriately decorated for floral delivery service.

National Flower Show Committee.

Chairman William F. Kasting of the S. A. F. O. H. Flower Show committee announces that it is impossible for him to write every member of this committee again, but would repeat, for the information of all concerned, that a meeting of the committee has been called for November 8, 1907, at 2.30 p. m., in the Auditorium Annex, Chicago, Ill. Every member of the committee who can is asked to be present.

Stray Notes from Across the Atlantic.

Colors of Sweet Peas.

It is curious how views differ as regards the color of sweet peas. In perusing our friend, S. B. Dicks', notes respecting the sweet pea show, I observe he quotes Elsie Herbert as white tinged blush. Really, this variety is practically a duplicate in color of Dainty, the pink picotee sort. Silas Cole, to my mind, is a long way from the color of Duke of Westminster. The latter is purple; Silas Cole, a chocolate maroon self. A really wonderful flower this. Rosie Adams has bluish wings, while the standard is of a coppery shade, quite a distinct color in sweet peas. The Marquis gets near the color of Mrs. W. Wright.

David Rust, in looking around Messrs. Burpee's grounds, spotted a few things apparently, but I am disposed to argue the point with him as to colors. Helen Lewis is quite a vivid orange in the standard; the wings only are salmon. John Ingman is a deep rosy carmine tinged with crimson, by no means a pink. Phyllis Unwin, to my mind, is worthless, and I am sure that any florist will find it a disappointment if he plants it as a pink. It is a wretched washy carmine, and of no account compared with John Ingman. It is not a Spencer either, lacking the size and waviness of the Spencer race. Beacon, though distinct, is of no use as a cut flower. It differs from Blanche Ferry in having deep cream wings. The standard is a trifle deeper, not nearly so bright, and quickly fades to a ghastly tint, especially under glass. It is too small to be of value, and seems to have deteriorated since it was first exhibited. Miss Philbrick is preferable to Flora Norton, owing to its greater vigor. It is more blue than lavender, quite a bright blue. Mrs. Higginson, Jr., is more of a lavender, and free from lilac. These varieties lack size, however; but they sell well as cut flowers.

I am amazed when Mr. Rust says Othello is the best dark sort. It has never made any headway against Black Knight. "Prima Donna is the best pink." Why? Where does Countess herself come in, to say nothing of Mrs. Hardcastle Sykes for a paler sort?

I am agreed that Dorothy Eckford is still unbeaten as a florists' white; it is purer and has greater substance than any other. Still, I expect to see Burpee's White Spencer shake up things, for I have had the pleasure of growing it. I am afraid, however, it will have to be merged into Etta Dyke. Burpee's Cream Spencer is a great thing, but here again it is not alone, for Clara Curtis has been shown, and, as such, I suppose the Cream Spencer must be known. We shall be rich in cream sorts this season, for Devonshire Cream, a large flower of good color, is being offered, as is also Harold. The latter I do not think much of. James Grieve is another likely starter.

Harking back to Mr. Rust, he speaks of Burpee's Unique. This variety was sent out by Starks, of Norfolk; it is a pretty, pale blue striped sort. Midnight is a seedling of Burpee's, which is not going to prove a winner. In the first place, a similar thing came out this year as Nigger. The color is not likely to find many admirers. Such deep dead shades are execrable, to my mind. Black Knight is deep enough. Midnight was growing at the Reading trials and it certainly found no favor. Give us art shades in sweet peas, say I; not despondent, doleful things, like Midnight or Nigger.

J. Harrison Dick speaks strongly regarding sweet peas in August 24 issue, but none too much. The point about the matter is, that there is a fair amount of rigging done. Interested scribes endeavor to ram down people's throats that this, that, and the other variety is all that spells perfection, and when some one comes forward and speaks plain and blunt, the fat is in the fire. More than one or two firms are in bad odor owing to the mixed state of their novelties. One doesn't mind a few rogues, but thirty, forty, fifty or even more per cent.; well, hang it all, why send such stuff out? Even some of the standard sorts, apart from the Spencers, have been badly mixed this season.

I cannot quite agree with all that Mr. Dick says with regard to Ingman and Herbert, and I have a note from Victoria, B. C., regarding the Helen Lewis mentioned, in which the writer states it to be a delusion as regards fixity. The only true Helen Lewis I have seen this season was a big batch grown from Watkins & Simpson's seed.

It seems to me Mr. Dick gets mixed up with old and new sorts. Princess Victoria was not shown until this year and was therefore not grown by the general run of growers. Sutton's new seedling, Our Queen, probably comes out this coming season. It will give the new Evelyn Hemus a shake-up, especially if it is in greater supply than this latter variety. I certainly go dead against the description of Menie Christie. It is not a rose nor a pink; it is a deep magenta and really an improvement upon Mrs. Chas. Mander. Both have a flushing of blue or violet in the wings.

I can't make out what is meant by Baker's stock of Charles Breadmore. There is no such variety, and

certainly not of Baker's. Perhaps Mrs. Chas. Mander is meant.

Then again, there seems to be a glorious mix-up among those referred to as this year's new things. If varieties already introduced are termed "this year's new things," I am agreeable to the inclusion of Nora Unwin and Lord Nelson. All the others, save Helen Pierce, which is a 1906 sort, are brand spanking new, and at time of writing are unobtainable. Silas Cole certainly will not be sent out this season. Princess Victoria and Princess Olaf are uncertain as is Nancy Perkins. Rosie Adams, this time rosy purple, The Marquis, Elsie Herbert, St. George and Evelyn Hemus are, or will be, on offer, but I would hesitate to say how great a percentage will come true, save of St. George and The Marquis, which were fine at the Reading trials. Evelyn Hemus, I learn, is a very short crop, so that there is small chance of its getting very far round.

New Rose Mrs. Jardine.

This new hybrid tea rose, raised by Alexander Dickson & Sons, of Newtownards, Ireland, has been tested by us for Winter forcing, and has proved a fitting companion to their former introductions—Killarney and Liberty. It is a strong robust grower, and can be easily handled. It flowers much more profusely than either Bride or Bridesmaid and the blooms are produced on long stems. The flowers are double, and can be used either in the bud or in the half expanded state. The color is bright rosy pink, shading in the outer petals to salmon pink. It is very fragrant, and in January when Bridesmaid and Killarney lose their color, Mrs. Jardine produces flowers as bright as in October or March.

ROBERT SCOTT & SON.

Sharon Hill, Del. Co., Pa.

New Hybrid Tea Rose Mrs. Jardine

Introducers, Robert Scott & Son, Sharon Hill, Pa.

Tobacco Hybrids.

I note Mr. Rust refers to Nicotiana Sanderae, but, personally, I go all the way on the new N. affinis hybrids. The flowers are larger, beautifully scented, and the habit is better than Sander's type. There are about a dozen colors, some approaching real pink and red.

The Florists' Exchange Convention Numbers.

I feel I ought to tender a word of congratulation for the S. A. F. O. H. numbers of The Florists' Exchange. They were splendid, and indicate how keen the publishers are to let the world know how things are done. By the way, why S. A. F. O. H.? What is an ornamental horticulturist? Does it mean that a florist is an ornament, or that his work is ornamental? If I decked my own humble phiz with sweet peas, should I be an ornamental horticulturist?

My! I find I have quite a pile of sheets filled with stray notes, and I am thinking a full stop right here will be good, both for me and the readers of The Florists' Exchange.

T. A. WESTON.

Kent, Eng.

CROSS-FERTILIZATION OF CHRYSANTHEMUMS.—A writer in the Gardeners' Chronicle, London, England, says the results of crossing among the single chrysanthemums seem to show how impossible it is to conform this work to any law. From the same cross (Edith Pagram, pink, × Annie Farina, terra cotta red), these colors were obtained: Terra cotta crimson, crushed strawberry, old gold, amaranth, blush pink with white ring, cerise, and dark pink. He adds: "Uncertain as the results of crosses are—yet those obtained from the crossing of sports are even less reliable—there seems to be a tendency, when using a sport for a parent, for the offspring to revert to the variety from which the sport has arisen. A good example has been noted in the Japanese section. Mme. Carnot crossed with Charles Davis (the latter being the male parent), gave a cross of a deep mauve or amaranth, resembling Vivian Morel, from which Charles Davis had sported. In such instances the sport appears to represent a superficial change, incapable of being transmitted sexually."

New York.

News of the Week.

The long talked-of association of wholesalers seems to have at last assumed a definite shape. Over twenty of the dealers have joined together for their mutual benefit. By-laws and constitution have been adopted, temporary officers have been elected, and a manager appointed; in fact, everything that goes toward the making of a permanent organization has been done, thanks to the spirited efforts of a few enthusiastic workers. The fact that the wholesale dealers are banding together for their own protection against too long credits and bad debts will be hailed with delight by a majority of the retail store men. These men will be glad to see the flower business elevated to the same plane as that of other legitimate industries, and they will welcome the day when all unjust competition is eliminated. If the wholesalers carry out the aims for which they have become organized, some obnoxious customs will become a thing of the past and the business in general will be benefited.

Some rather adverse comments are being made by retailers in the city respecting the methods some nurserymen have of coming into the city and soliciting trade and executing orders in the form of filling window boxes with evergreens for Winter decoration. It is a well-known fact that in New York City, more so perhaps than any other place in the country, there is a great demand for evergreens for window box and veranda box purposes, and if the nurserymen adjacent to the city are to come in and solicit this trade and supply the evergreens at a wholesale price, it would seem that the retailers have but one course which they can adopt, and that is to organize. Organization seems to be the order of the day—the plant growers have gotten together; the wholesale florists have gotten together, so why not the retail florists?

P. Ouwerkerk and wife returned last week from a trip to Europe. They stayed six weeks in Holland, then took in the beauties of Switzerland. Mr. Ouwerkerk reports that the nursery stock in Holland is looking fine; there will be a plentiful supply of everything except large stock, over three feet, which is scarce.

The Municipal Art Society desires that in the proposed improvement of Central Park there shall be some permanent memorial of the men to whom the city is largely indebted for it—Clavert Vaux and Frederick Law Olmsted, the landscape architects. The Legislature in 1855 passed an act providing for a large central park in New York, and two years later Mr. Olmsted became its superintendent. The Park Commission having decided to advertise for new plans, Clavert Vaux induced Mr. Olmsted to enter the competition with him, and they received the highest prize. Mr. Olmsted then became architect in chief, with Mr. Vaux as his assistant, and in four years the work was practically completed.

The firm of Spaulding & Hodgson, florists, of Newport and New York, has been formed with A. Warren Spaulding and Charles F. Hodgson as partners.

D. H. Hollingsworth, retail florist at 1146 De Kalb avenue, Brooklyn, has completed his first year in business, which has been a very successful one.

H. J. Hoffmeier, retail florist at Eighty-second street and Broadway, is opening a branch establishment on the platform of the Subway station at Times Square. This is the first florist establishment to be started at any of the Subway stations.

His many friends in the trade will be glad to know that W. F. Sheridan is now well enough to come to his office occasionally.

The annual chrysanthemum show of the Morris County Florists and Gardeners' Society was held in Madison, N. J., on Thursday and Friday, October 31 and November 1. The annual show at Tarrytown takes place next week, as also does the exhibition of the American Institute in New York, which will be held in their rooms on West Forty-fourth street.

We regret to report the serious illness of Mrs. Henshaw, wife of A. M.

Henshaw, wholesale florist, 44 West Twenty-eighth street, who is suffering from spinal meningitis.

Some uneasiness has been felt in the trade owing to the suspension of several banks, and for the time being there is quite a little money tied up belonging to the trade. It is not believed, however, that any actual loss will result from the suspension of the banks, and it is expected that everything will be moving smoothly in the very near future, as there is no doubt of the solvency of the banks that have been obliged to suspend temporarily.

Walter Mott was a visitor in town this week. He has severed his connection with M. J. O'Brien, Sharon, Pa., and is now making his home in Springfield, Mass.

Philadelphia.

News Notes.

Our retail stores do not show the activity that might be expected at this season; while trade is moving along nicely, there is no bustle.

W. Atlee Barpee gave a dinner at the Union League on Saturday last to Postmaster-General Meyer. Covers were laid for 100, and those present were in the main business men who are interested in the extension of the postal service, more especially the introduction of the parcels post. The dinner was a great success and will no doubt have beneficial results.

W. A. Hammond, Richmond, Va., was in town on Tuesday.

The Florists' Club meeting on Tuesday next will be an interesting one, being the first meeting at which the newly elected officers take charge. President Hahman is making an extra effort to make up some strong committees and introduce some new features for the general benefit of the trade. Walter P. Stokes will address the meeting on "Forcing lily of the valley."

Robert Scott & Son, Sharon, Pa., have the new Dickson rose, Mrs. Jardine, in splendid condition; it is all that has been claimed for it, far surpassing all other hybrid teas at this time of year. It will be money well spent for all interested in roses to go and see this new-comer growing. All who have done so are much impressed with its growth, productiveness, and perfect development of the flowers. DAVID RUST.

Boston.

The Week's News.

The Boston Co-operative Flower Growers' Association held its sixteenth annual meeting at Young's Hotel on Saturday evening. The meeting was preceded by a banquet, some thirty being present. After-dinner speakers included: W. H. Elliott, Hugh Cameron, N. H. Knapp and John W. Duncan, the latter being the only press representative present. At the business meeting a dividend of \$5 per share was declared, and the following officers elected for the ensuing year: President, W. C. Stickel; vice-president, William Nicholson; secretary and treasurer, George Cartwright; directors, Alexander Montgomery, E. Suetermeister, L. W. Mann, W. W. Edgar, A. Christensen and E. Allan Peirce.

A recent visit to the establishment of H. H. Barrows & Son showed their stock of ferns to be in exceedingly fine shape. The whole place, which comprises about twenty thousand feet of glass, is devoted to the growing of nephrolepis, the variety most extensively grown being Whitmani, although one house is given up to bostoniensis. Several houses are devoted to the growing of N. Whitmani for cut fronds, which for decorative purposes are unexcelled; and the other houses are all filled with young stock, the fine quality of which has given this firm a reputation all over the country. There are two new varieties of nephrolepis being grown, which will be heard of at a later date, the stock not yet being in sufficient quantity to warrant their distribution.

Samuel Niel is rebuilding one of his houses at his place in Dorchester; this will practically make this establishment all renewed within two or three years.

W. W. Edgar is, we regret to say, confined to his home by sickness.

W. W. Castle is now running the Dickerman place in Dorchester.

H. L. Belcher, Winthrop, is in Portland, spending his honeymoon, his bride having been Miss Edith Moses, of Winthrop.

H. H. Barrows is on the sick list,

having been confined to bed for several days.

Frank Deery, formerly with Hathaway, of Brockton, is now with Zinn on Beacon street. J. W. D.

Indianapolis.

Current Topics.

Bob Ellis, foreman for Bertermann's at Cumberland, is celebrating the arrival of a fine boy.

Henry Rieman, Bertermann Brothers Company and A. Wiegand & Sons are making preparations for flower shows the second week in November.

Herman Junge, president of the State Association, leads in the preparations for the exhibit of the society. Edward Bertermann, manager for Bertermann's, is making arrangements for an excellent rose display. Mr. Rieman says little, but will be on hand with his usual prize winners.

Herbert Heller, New Castle, transacted business here this week.

John and Edward Bertermann visited the several florists at Richmond last week; all of them were favorably commented on. Much is heard of the Hill Company's new roses over the country; every word in favor of them is certainly borne out by the fine exhibition at the company's establishment.

Rhea Reid is only one of the grand collection found there.

A. F. J. Baur and Homer Wiegand also visited Richmond.

W. Rhodenbeck has resigned his position at French Lick; an experienced gardener will find a good opening there.

Paul Berkowitz, Philadelphia, and Harry Longnecker, Richmond, Ind., were visitors. I. B.

St. Louis, Mo.

News Notes.

From now on weekly meetings will be held by the executive committee of the St. Louis Horticultural Society, who have the flower show in charge. The exhibition will open on Tuesday, November 12, and close Friday, November 15. It will be held in a new music hall just completed by the United Railway Company at Park and Grand avenues, which has a floor space 100x100 feet. The official program will be out by November 1. The society gave its first show last Spring with great success, the public being admitted free; this should bring a large attendance to the Fall show. The expenses being cut considerably by free hall rent, the exhibition should be a financial success this year. One of the features of the coming show will be \$500 Shaw premiums, which include the \$25 Henry Shaw medal. These prizes are offered by the directors of the Missouri Botanical Garden under the will of the late Henry Shaw. Other features will be the mantel and table decorations for which liberal premiums are being offered. A large number of outside entries are expected to reach the secretary early. Any information regarding the show should be addressed to the secretary, O. G. Koenig, 6473 Florissant avenue.

Adolph Brix, the St. Louis avenue florist, will next week, Thursday, open free to the public his flower show in the Y. M. C. A. building at Nineteenth and St. Louis avenues, across the way from his retail store. Mr. Brix reports that a number of imports have arrived from Germany which will be exhibited, also a fine lot of blooming and decorative plants from his Mead avenue greenhouses. The St. Louis Florists' Club, of which Mr. Brix is a member, will attend in a body on Friday afternoon. Mr. Brix has a number of surprises in design work and table decorations for the boys, which will be made up by his European artist.

J. F. Ammann, Edwardsville, Ill., was a visitor the past week in the wholesale district. He had just returned from Chicago, where he went in the interest of the State Florists' Association, also regarding the appropriation secured by the greenhouse interests from the last Legislature. Mr. Ammann reports that in his rounds among the trade he heard of a great many visitors who will come down here during flower show week.

President William C. Young of the Florists' Club reports that he, with Secretary Bentzen, will meet with the trustees this week and make arrangements for an interesting meeting of the club November 14, also for entertaining any of the trade visitors on that afternoon who attend the show; quite a number are expected.

From advance postals A. L. Barnett of

Reed & Keller, New York, should have been here this week, but reports from Chicago, that Mr. Barnett has been missing since October 12, caused a general regret among the local trade, where he has a host of friends.

The Missouri Botanical Garden will open its public chrysanthemum show on Monday, November 4, on the grounds of the Garden in a large tent, 100x90 feet. The show will last the entire week, and should the plants hold out, it will continue through the second week, at which time it will be free to the public. The second week will conflict with the Horticultural Society's show, but Professor Trelease says that free exhibitions will help to advertise that one. At the Garden nothing but plants will be shown. It is to be hoped that the public will patronize both shows liberally.

ST. PATRICK.

New Orleans, La.

News Notes.

The past two weeks chrysanthemums have advanced rapidly, and there will be many thousand flowers open, which at times appeared would be too late for All Saints' Day. This is especially true of Colonel Appleton and a few other varieties, which, after they once begin to show color, develop fast. There appears to be a shortage this year of chrysanthemums grown naturally without disbudbing for bunches. The Metairie Ridge Nursery Company grew about one-half of their crop in the open field this year, and the other half indoors; the first are now covered with cloth and the flowers are equal to those grown under glass. They have one house of especially fine blooms. Clementine Tousey, Colonel Appleton and many other varieties are grown, in addition to large numbers of Mrs. Henry Robinson; but Mr. Papworth thinks nothing has been introduced so far that will take the place of the last named as an early white for the South. At this place they have been experiencing trouble in procuring good water; the Seventeenth street canal, from which the company gets its supply during long droughts, has, upon analysis, been proven to be heavily charged with salt, and did irreparable damage to the rose and other crops.

Prim & Poblet, the Carrollton growers, have a nice display of chrysanthemums, consisting of Mrs. Henry Robinson, Holst and Colonel Appleton.

Justin St. Mard also has an interesting display of good flowers; in addition, he has a nice patch, grown especially for bunching.

Dubois, the large grower at the entrance to the Carrollton cemetery, has his usual large display, although they are a little backward this season and he was unfortunate in losing large numbers during the early part of the year from the heavy rains. This grower covers his entire patch with a huge tent and makes an opening in the fence leading to the same, so that visitors can enter and leave at will; this is one of the attractions of the neighborhood.

Mrs. Francois Guaz has been confined to her room for the last five weeks, suffering from inflammatory rheumatism.

The Metairie Ridge Nursery Company has opened a branch at the Halfway House, near the entrance to the main cemeteries. Mr. Rutherford, of this company, was on the sick list, but is at his post again.

J. A. Newsham at the Magnolia Gardens has erected an elevated steel tank, of 3,600 gallons capacity, over one of his wells and installed a gasoline engine and pump. He will start demolishing his range of glass at his Nashville avenue place in November and will rebuild same at the Magnolia Gardens.

CRESCENT CITY.

DETROIT, MICH.—Local business conditions are bright and encouraging. The social whirl is on and with it an increasing demand for the florists' product. Many Fall weddings cause still more enlivened action for the decorator.

The daily heavy receipts at the wholesale houses are cleared up at good prices.

Breitmeyer's Sons are receiving very fine violets from their Mt. Clemens place. Their product is quickly used up by many large weddings, some of them necessitating 400 to 500 chrysanthemums.

September was not a very good month; still, some business was done when this establishment cut and retailed 35,000 roses during that month.

Address for further information, terms, etc., to Mrs. Hugh Chesney, Farmington, Conn.

Thirty cents is the minimum charge for advertisements on this page.

THE EXHIBITIONS

Lenox, Mass.

Never since its organization seven years ago has the Lenox (Mass.) Horticultural Society set out for public inspection such a superb exhibition as the chrysanthemum show of 1907, which opened on October 28 in the Town Hall, Lenox. The display of blooms was most remarkable for so early in the season, and it is very doubtful whether for size, color and finish of flowers this show of chrysanthemums will be excelled at any exhibition anywhere this season. The hall was much too small for the wealth of greenhouse products brought to it by the talented representatives of the gardener's profession, who preside over the magnificent estates which abound in the picturesque Berkshire Hills of Massachusetts, and the vegetables and carnations had to be transferred to the basement hall.

Among the cut flowers exhibited some of the most interesting were as follows: In the class for large vase of 24 blooms in competition for the Far-

FOR SALE

PIPE Good serviceable second hand. No Junk, with new threads, 1 in. 3¼c.; 1½ in. 4¼c.; 1½ in. 5¼c.; 2 in. 7¼c.; 2½ in. 10c.; 3 in. 14c.; 4 in. 19c.; per ft. New 2 in. Standard steam, 11c. All kinds of fittings for 4 in. cast iron and all sizes wrought iron.

FOR SALE—About 6000 feet 4 in. cast-iron pipe, three expansion tanks, elbows, tees and all connections; one No. 18 Hittings boiler and glass on nine greenhouses. Apply, Jos. De Frasn, 300 South Second Street, Pottsville, Pa.

quhar cup, Thos. Proctor, gardener to Mr. R. W. Paterson, showed assorted varieties. A. H. Wingett, gardener to Mr. Charles Lanier, had Beatrice May; E. Jenkins, gardener to Mr. Geraud Foster, Wm. Duckham; R. Speirs, gardener to Mrs. John E. Parsons, a mixed vase. The prizes were awarded in the order given, and every exhibit was a stunner.

C. H. Totty's prizes, for six long-stemmed blooms of Helen Clay Frick, were won by Messrs. Jenkins, Wingett and Speirs, respectively, with superb specimens.

In the gold medal class for six vases, three blooms of each, Thos. Proctor's winning set comprised Mrs. Henry Barnes, Mrs. A. T. Miller, Reginald Vallis, Mrs. J. E. Dunne, Donald McLeod, and F. S. Vallis; the first three being new varieties.

The class for 24 distinct varieties brought out three competitors, Thos. Proctor winning by the narrow margin of three points. E. Jenkins and R. Speirs being second and third respectively.

A. J. Loveless, gardener to Mrs. John Sloane, who won first for set of new varieties of 1907, had in his collection, President Leubet, Rose Lawrence, Mrs. Geo. Hunt, H. C. Frick, Reginald Vallis, British Empire, President Viger, Mrs. Robt. Lee and Mrs. A. T. Miller. In the class for 12 distinct varieties, A. H. Wingett and E. Jenkins won respectively; particularly fine were Mrs. George Hunt, Mrs. Henry Barnes, Mrs. Partridge, President Viger and Merza.

Perhaps the most sensational exhibit in the cut flower classes was a vase of Lady Hopetown exhibited by A. H. Wingett; the writer has never seen their equal. The same exhibitor won in classes for six yellows, and bronzes, with magnificent specimens of Mrs. W. Duckham and Mrs. A. J. Miller.

Specimen plants of enormous size were shown by Mr. Geo. G. Haven, Mr. W. D. Sloane and Mrs. John E. Parsons. R. Speirs's group of plants in 8-inch pots, averaging a dozen exhibition flowers each, was especially noticeable. The same exhibitor won out in the class for twelve varieties in 6-inch pots.

The entries in other classes besides the chrysanthemums were of equal interest and high grade. The premiums for arrangement of flowering and foliage plants brought out three groups of sensational quality and effectiveness of arrangement, the winners being E. Jenkins, F. Heeremans and A. J. Loveless respectively. Mr. Jenkins's group contained large numbers of Cattleya labiate interspersed with Gypsophila elegans, a combination which fairly sparked. Oncidiums and Dendrobium Phalaenopsis were profusely used, and the group was crowned with graceful specimens of Cocos flexuosus, while Begonia Turnford Hall, lilies, etc., adorned the base. Neither this nor Mr. Heeremans's group, which was awarded second premium and was good enough to win first prize anywhere, had anything of the character of the formal pyramidal style so prevalent in exhibitions of this kind, and each was an object lesson in decorative plant grouping, which should have had a larger hall in order to be seen to advantage. A. J. Loveless showed a glorious orchid group, including seedling cypripediums. There were magnificent ferns from several exhibitors, and many other special exhibits, including a group of crotons of remarkable coloring, not for competition, from the Girard Foster estate.

Roses, carnations and violets were staged in great profusion. In the rose classes the principal winners were Messrs. Jenkins, Wingett, Heeremans, Loveless, and Speirs. The carnation class was well filled; especially fine were Winsor, Beacon, Enchantress, Aristocrat and White perfection, and judging from the opinions expressed, the latter variety is one of the best whites on the market, with a very fine stem, some of the flowers measuring 3 1/2 inches across.

The vegetable displays of this society rank highest in the country, and the present occasion was no exception to the rule. For eighteen varieties of vegetables E. Jenkins, R. Speirs and G. H. Thompson won respectively; 12 varieties of vegetables, S. Carlquist, Walter Angus and Thos. Page; six varieties, A. J. Loveless; six onions, A. H. Wingett; six lettuce, E. Jenkins; six celery, A. H. Wingett; six carrots, W. Angus. The fruit was also excellent. Thos. Proctor's Gros Colman and S. Carlquist's Muscat of Alexandria grapes being particularly fine.

The judges were: T. D. Hatfield, Wellesley, Mass.; Robert Cameron, Cambridge, Mass.; James Ballantyne and George Middleton, Tarrytown, N. Y. Among the trade visitors were J. K. M. L. Farquhar and W. J. Stewart, Boston; John Low of Peter Henderson & Company, and A. T. Boddington, New York; George Struck, Summit, N. J.; and John S. Hay, representing Henry A. Dreer, Inc., Philadelphia, Pa.

Buy now while prices are low and the weather permits safe shipping.

We protect the trade and have on department store customers.

ARAUCARIAS OUR SPECIALTY WATCH US GROW

1907 is our 12th anniversary in a successful career in the importation, growing and shipping of this well-known and so much admired evergreen, decorative plant, Araucaria Excelsa, Robusta, Compacta and the Excelsa Glauca.

Our importation this spring, 1907, has swollen up to the enormous number of 6,000; more are coming with the azaleas in September and October. The florists in every city from the Atlantic to the Pacific Ocean can talk of Aschmann's Araucarias.

Now is the time to buy. They will gain in their growth 100 per cent. in two or three months.

The next in rank is our Nephrolepis Feros, of which we only grow the best selling and well-known varieties, and of which we have seen a big lot: Boston, Elegantisima, Whitmoai and Scottii, three large houses full, in best selling sizes, all pot grown (not bench grown).

Our ferns are not forced or grown in shady houses, but grown exposed to the sun, ventilators are open day and night. Such treatment stiffens the fronds, and makes strong, stout plants, that can be shipped 5,000 miles safely without injury to the plants in transportation.

ARAUCARIA EXCELSA, 6 to 6 1/2 in. pots, 10-12 to 14 in. high, 3 to 4 tiers, 2 years old, 60c. each. Larger sizes, 5 1/2 to 6 in. pots, 2-3-4 years old, 3-4-6 tiers, 60c.-75c.-\$1.00 to \$1.25 each.

ARAUCARIA Compacta Robusta, 6 in. pots, 2-3-4 years old, 10-12-15 to 18 inches high, 3 to 4 tiers, \$1.50-\$1.75 to \$2.00 each.

ARAUCARIA Glauca, 3-4-5 tiers, 2-3-4 years old, 10-12-15 to 20 in. high, 6 in. pots, \$1.00-\$1.25-\$1.50-\$1.75 to \$2.00 each.

LATANIA Borbonica, 25c. each.
KENTIA Forsteriana and **Belmoreana**, 6 in. pots, 6 leaves about 26 inches high \$1.00, 5 1/2 and 6 in. pots, 6 leaves, 20 to 25 inches high 75c., 6 to 5 1/2 in. pots, 6 to 6 leaves, strong bushy plants, 50c. to 60c. 4 in. 18 to 20 inches high 35c. each.

COCOS Weddelliana, 3 in. pots, 10-12-16 in. high, 16c.-18c. to 20c. each.

ARECA Lutescens, 4 in. pots made up, three plants in a pot, 18-20-22 inch high 20c. each.

Iowa State College, Dept. of Horticulture and Forestry.
Ames, Ia., October 24, 1907.

Mr. Godfrey Aschmann, 1012 West Ontario St., Philadelphia, Pa.

My dear Sir: The shipment of plants recently ordered from you came to hand in good condition. Kindly accept our thanks for your prompt attention.

Yours very truly,
A. T. ERAIN, Associate Professor.

Please mention if plants are to be shipped with or without pots.

All goods must travel at purchaser's risk. Cash with order, please.

GODFREY ASCHMANN

Importer, Wholesale Grower and Shipper of Pot Plants
1012 West Ontario Street, PHILADELPHIA, PA.

KEEP TO THE FRONT

By getting varieties you know have all the good qualities.

ANDREW CARNEGIE (Scarlet Harlowarden)

Is the one you know is good from the past record of the parent. The color is the most desirable shade—the ideal scarlet. Clean, healthy stock for early delivery.

\$12.00 per 100; \$100.00 per 1000

CHICAGO CARNATION CO., A. T. PYFER, Mgr., JOLIET, ILL.

GIANT PANSIES Large flowering, best mixed colors, strong stocky plants, \$2.50 per 1000; 5000 for 10.00. Cash with order.

J. P. CANNATA,

Mt. Freedom, N. J.

FICUS ELASTICA or RUBBER PLANTS, home grown and Belgium stock, 5-6 1/2 to 6 in. pots, 25c.-35c.-40c.-50c. and 60c. each.

FERNS Boston, 4 in. 20c., 5 in. 35c., 6 in. 60c. each.
Elegantisima, 4 in. 25c., 6 in. 50c. each.

Whitmoai, 6 in. single plants, strong, 60c., 75c., \$1.00 each; 7 in. as big as a hushel basket, made up 3 plants in a pot, \$1.25 to \$1.50 each.

Pieroni 4 in. 20c. to 25c., 6 in. 60c. each.

Barrowsii, 5 1/2 in. 40c. each.

Scottii, 4 in. 20c. to 25c., 6 in. 60c., 6 and 5 1/2 in. 35c. and 40c., 7 in. very heavy \$1.00 each.

Ferns for Dischee, A large assortment in 2 1/2 in. pots, \$5.00 per 100.

ADIANTUM Hybridum, the best adiantum for cut purposes, large plants in 6 in. pots, 30c., 35c. and 40c. each.

ASPARAGUS plumosus nanus, 3 in. pots, \$6.00 to \$6.00 per 100; 4 in. \$10.00 per 100; all husky plants.

CYCAS REVOLUTA (Sago Palm), plants from 6 to 10 leaves 10c. per leaf, above 10 up to 35 leaves 80c. per leaf.

PRIMULA OBCONICA, in bud and bloom, best strain, 3 lo. \$7.00 per 100; 4 in. \$10.00 per 100. 5 1/2 in. \$2.00 per dozen.

CHINESE PRIMROSES, 4 in. best Jno. P. Rupp strain, \$10.00 per 100, 6 in. \$2.00 per dozen.

HYDRANGEA OTAKSA, pot grown, 6 in. to 7 in., 25c., 35c. to 50c. each.

AZALEA INDICA, DEUTSCHE PERLE, for Christmas forcing, large specimen plants, \$1.00, \$1.25, to \$1.50 each; other varieties for later forcing, only best kinds are imported, 75c., \$1.00, \$1.25, to \$1.50 each.

BEGONIA, Gloire de Lorraine, 6 in., 60c., 75c., and \$1.00 each.

SOLANUM (Jerusalem Cherries) full of berries 6 in. and 7 in. pots, 25c., 30c., 40c., and 60c. each.

Oakmont, Pa., October 22, 1907.
Mr. Godfrey Aschmann, 1012 Ontario Street, Philadelphia, Pa.

Dear Sir: I have not had time to write you since I received the plants on the 12th ult. I must state I am well pleased with them; they are fine and doing nicely. Thanking you very kindly for sending such nice plants. Very respectfully,

R. H. NIEL, florist.

PANSY PLANTS

Of my largest flowering mixture of show varieties; unsurpassed quality, strong, stocky plants, at \$3.00 per 1000, in 5000 lots; \$2.50 per 1000.

Gustav Pitzonka, Bristol, Pa.

THE NEW CARNATION AFTERGLOW

WE beg to announce that we will offer to the trade, the coming season of 1907 and 1908, the new carnation Afterglow, a variety of sterling merit, which is destined to be grown as universally as the Lawson in its time, as it has done exceedingly well wherever it has been tried—in six different sections of the country—the Far East, West and Middle States—and all report it as an "Ideal" commercial variety, grand in every way. It has won the S. A. F. Silver Medal, for the best flower or plant, at the Monthly Exhibition of the Cincinnati Florists' Society in 1906, and scored 91 points at quite a number of exhibitions held in different cities in the United States. It has never failed to score wherever shown. It has scored the highest of any seedlings at the exhibition of the American Carnation Society, held at Toronto in 1907, after reaching there twenty-four hours late from Framingham, Mass. In color it is everything that the name implies—a bright rosy cerise. In stem it excels any commercial variety now extant, not excepting Enchantress, being somewhat longer and always rigid. Never weak, in habit it is very vigorous, "a Grower's Delight," as it recuperates very readily after planting from the field; also from the sand. It loses no time in getting to work.

Orders now booked, to be filled in rotation for well-grown, well-rooted cuttings, at \$2.00 per dozen; \$12.00 per 100; \$100.00 per 1000

"Afterglow has been grown for the past season by the undersigned and offered by them."

WILLIAM NICHOLSON,
Framingham, Mass.

F. S. POST,

Brunswick Road TROY, N. Y.

THE WEEK'S WORK.

Azaleas.

The best varieties of azaleas for forcing into bloom for Christmas sales are Apollo, Deutsche Perle, Simon Mardner, Verveneana and Pauline Mardner, and as soon as possible work on them should be started. In order to have them right when they are most wanted. There is no more important detail in the work connected with the forcing of azaleas than that of making sure, beyond the shadow of a doubt, that the roots which are imbedded in the soil on arrival will, in some manner or other, receive sufficient water, and that the soil itself receives an adequate supply of water before the operation is commenced of adding more soil while placing the plants in their forcing pots. If it seems advisable to reduce the balls of earth before potting up, it can be accomplished by a very sharp-edged knife, cutting roots and soil to the desired extent all round the ball. Then comes the time for soaking the balls in water for several minutes or long enough to make it certain that the water has reached every root and particle of soil. When it comes to potting azaleas there is no necessity, for forcing purposes, to place them in pots so large that an addition of an inch or more of new potting soil is necessary all round the ball. All that is required or expedient, is space enough between the roots and the pots to allow of sufficient soil to be made thoroughly firm with the aid of a potting stick. This thorough firming of the soil is of the utmost importance in the forcing and growing of azaleas. There is usually but a limited space available for crocking, but crocks should never be left out. Place one large piece, the hollowed side down, over the hole of the pot, over which place a layer, at least three quarters of an inch in depth, of small crocks. For forcing, any good potting soil will answer, but a compost of peat and loam, with the addition of a good sprinkling of sand and well-rotted cow manure, is preferable. When the plants are potted they should be placed in a cool house where they can be shaded for a few days or until it becomes necessary to remove them into heat for forcing. On all bright days succeeding the potting of the plants they should be watered overhead frequently, so that the water thus applied will work its way surely through the soil added in the potting and into the soil in which the roots are imbedded also. On bright days the plants will be benefited by a syringing once or twice a day.

Azaleas now coming in, but of kinds not required for early forcing, should be placed in some cool place, plunged in soil, until the time comes when potting can be well attended to. A deep pit or frame is perhaps the best place for them.

Begonia Gloire de Lorraine.

Although it is now too late to remedy any radical error in the culture of Begonia Gloire de Lorraine intended for Christmas, there is time yet to spoil them as well as time in which a great deal may be accomplished in the way of finally developing these beautiful plants. Careful attention to watering and ventilation, and the uniform regulation of temperature so as to keep the plants from getting a check at any time, from any cause, will do much to aid in the right direction. There is also a good deal in the way the necessary tying is done.

Poinsettias.

Poinsettias of all sizes are good sellers in one form or another. Large pot plants are, of course, relatively and proportionately of more value than small ones, but that is no reason why the stock of a small size should not now receive full attention. Large plants should be fed with liquid manure just as soon as their pots are well filled with roots, and the dose increased as the plants show signs of completed growth, and the beginning of the formation of bracts. Small plants of poinsettias, so much used and appreciated are not only benefited by applications of liquid manure, but it is to them an absolute

necessity, and with such plants there is much less danger of injury from overfeeding than with plants of larger size in pots in proportion.

Marguerites.

There are not many plants so easily grown as Marguerites. This applies to bench and pot culture alike. Plants grown and kept in pots during the Summer should at least receive a shift into pots one size larger if they are intended to be grown in pots and flowered during the Winter. Good soil is very important, and so is plenty of water after they have been kept on the cool side for a time, which they should be. Marguerites are usually good sellers as cut flowers, from bench grown plants. They are just as easily propagated now from cuttings, while it is of advantage to do so, also.

Heaths.

Heaths are hard to grow, perhaps more so than any other class of plants grown commercially. They require constant attention from one who has by actual experience learned the way of treating them at all stages, and only by such experience can any man have good results with them. At this time when many varieties are preparing to come into bloom, they require fully as much care and vigilant attention as at any time of their growth. Careful watering at the roots only, and cool and light quarters mean much for success with heaths. They are very liable to mildew, not because of any natural defect in themselves, but rather because of some wrong treatment, consisting usually in being kept in a too high temperature. Heaths soon coming into flower should be placed as near the glass as possible, in a house where ventilation can be freely given and full light always available. They should be watered only when, after careful examination of each individual plant, water is needed. The atmosphere of the house should be kept dry by refraining from sprinkling either plants or paths. No fire heat is necessary until the temperature of the air outdoors gets so low that indoors it falls below 45 degrees. Even when it becomes necessary to force, great care is required so that injury is not caused by a sudden rise of temperature.

Dracenas.

There are a great many kinds of plants that thoroughly appreciate the help that bottom heat is to their development after the natural warmth of Summer gives place to the chilliness of Fall and Winter, but there are very few plants that so unmistakably show signs of appreciation as the choicer varieties of dracenas. It just suits these plants to be placed on a bench which almost rests on the pipes, or so placed that for the same purpose heat can reach in as direct a manner. The growing of plants in this way may not be conducive to longevity in the hands of purchasers, but dracenas and crotons are for the most part used in such arrangements for sale, especially at Christmas, that there is but little show of pretense of their lasting qualities. Like conditions, though perhaps in a somewhat modified form, surround the purchase as well as the sale of single specimen plants. It is fairly well understood between buyer and seller that such plants have not iron constitutions. Very much will not be gained by the potting of dracenas in the way of shifting them into larger pots from now on, if the intention is the disposal of them during the holidays. Small plants can be fed and brought into color by applications of water containing some kind of fertilizer, and such plants will be found of great service to florists in making up because of the ease with which several may be put into one receptacle in conjunction with other and less highly colored material. The narrow leaved dracenas of such grand varieties as terminalis and Lord Wolsley are unsurpassed for many forms of made-up work for Christmas shoppers in search of things bright and attractive.

Storing Bay Trees.

A few years ago when the use of bay trees in Summer had not reached anything like the proportions it has since assumed, the question of Winter storage of the trees was but a small matter. Now, however, acres of space are taken up by bay trees during the time they can-

not be used for decorative purposes outdoors successfully.

A cool greenhouse, where hard freezing of the atmosphere within it can be prevented, will do for bay trees in Winter, but a shed or cellar where moderate light will reach the plants will be found much more suitable, and comes much nearer than the former in likeness to the cold storage houses where large numbers are stored along with other like stock every Winter. Bay trees do not require a great deal of light; in fact, during the Winter or during the coldest interval of it, when alternate freezing and thawing is common, it is much the safer plan to shade the trees slightly from the direct rays of the sun. The trees thus, in a manner at rest, do not require water in anything like such quantity as when they are outdoors, doing their best to grow in Summer; but they will need an occasional watering in order that the roots shall not at any time become dust dry.

Aucubas.

Aucuba japonica, in a large specimen, is a valuable possession and well worth taking good care of in order that it may not only remain such, but proceed to grow into something still more worthy of attention and care. Aucubas will survive the Winter under exactly the same conditions as are necessary for the successful wintering of bay trees, although aucubas will thrive perhaps without as much light as is required for the former, and will in consequence be more at home during the dark days of Winter in an ordinary shed or cellar than the bays.

Outdoor Covering for Winter Protection.

The problem again presents itself of how most effectually and most economically to protect everything that must of necessity remain in the open ground all through the severe and trying months of a long Winter. The question of expense enters largely into every important move made by horticulturists of all classes, and if there are in one class considerable numbers who never think of the expense of this, that or the other, such a state of things is unfortunate and not at all to the credit of those responsible for its existence. The commercial man cannot expend in the protection of such things as evergreens an amount bordering on half the value of the material he is protecting; and to be candid, there is no cause usually visible for any such expenditure. Evergreens, especially subjects recently moved, need some sort of protection in many parts of the country in order that they come out unscathed early next Summer. Plants of loose habit and of such a character that the heavy snows of Winter would be liable to seriously damage them, will be helped to resist such eventualities by tying up those branches; and in like manner will yews and junipers as well as many other plants of pyramid form be benefited by encircling them with one or more rounds of twine. There is no better covering for the soil over the roots of such plants than forest leaves if such can be kept in place, which can be accomplished by strewn over them loose stable manure or marsh hay. And again, there are but few, if any, protective agencies more effective for the protection of the branches from the combined baneful influence of Winter frost and Winter sun, than marsh hay scattered over and in among the branches of young evergreens, along with the help of the more elevated protection afforded by the placing of spruce or hemlock branches there also.

Miscellaneous.

Calceolarias that have filled their pots with roots should be immediately shifted into larger pots.

Cinerarias need plenty of air and room and should be placed as near the glass as possible. To keep these in good growing condition, the roots also must have room to extend and the foliage be kept free from greenfly.

Covering should be, from this on, held in readiness for the protection of all stock needing protection in frames or pits not provided for otherwise, outdoors.

Keep the propagating bench employed from now on. Do not wait for many kinds of cuttings to make roots nearly a yard long before potting. It is much safer as well as conducive to better results with many things to take them out of the sand and pot them when they have made roots of but very small proportions.

FALL SPECIALTIES

We have large blocks of the following plants, valuable to every florist:

CANTERBURY BELLS. (Campanula Media)—Grand for Winter and Spring flowering in pots. Strong, field grown plants in Blue, Rose or White—\$5.00 per 100.
BOUGAINVILLEA GLABRA SANDERIANA. One of the grandest market plants, much in demand again. Compact, well trained specimens, sure to bloom, 4 inch pots, \$2.75 per doz., \$20.00 per 100. 5 inch pots, \$3.50 per doz.
CELESTIAL PEPPERS. 4 inch pot-plants full of young fruit. \$8.00 per 100.
ASPARAGUS PLUMOSUS. 2½ inch at \$3.00 per 100.
ASPARAGUS SPRENGERI. 2½ inch at \$2.50 per 100.
BOSTON FERN. 2½ inch, strong, \$1.00 per 100, \$30.00 per 1000.
SHASTA DAISIES. Field-grown, named varieties, mixed, at \$5.00 per 100.
HARDY PINKS. Field-grown in variety, \$5.00 per 100.
GENISTA RACEMOSA. Strong 1 inch pots, \$15.00 per 100, 5 inch \$20.00 per 100.
PEONIES. Send for special Peony circular, if interested.
AZALEA INDICA. Best market varieties only. No assorted case lots. Let us know your wants.
FERNS for dishes, fine little plants of good varieties, \$2.50 per 100.
BOSTON FERNS. 5 in. pot, \$35.00 per 100, 6 in. pot \$50.00 per 100.
NEPHROLEPIS ELEGANTISSIMA and WHITMANI. Fine short stock, 5 in. pots, at \$50.00 per 100, 6 in. pots at \$75.00 per 100.

Send for catalogue No. 5, describing full list of Florists' Bulbs, Seeds, Plants, Etc.

M. H. KRUSCHKA, Asbury Park, N. J.

Caladiums keep very well through the Winter, in the pots in which they have been grown, if after the proper process of ripening the soil has been allowed to become dry.

Achimenes can be kept in the same way as recommended for caladiums; or they may, after the tops have died down, be taken out of their pots and placed in shallow boxes filled with dry sand.

D. M.

REVIEW OF THE MARKET

NEW YORK.—The cut flower market seems to be suffering a depression just now, and prices are, in the main, very unsatisfactory. While a great many chrysanthemums are coming in at present, we do not believe that the crop is nearly as large as the one a year ago, and prices obtained will not compare very favorably with those in vogue at that time. Some very fancy blooms are arriving, for which not more than \$6 per dozen is asked; these are really exhibition flowers and are of fancy varieties. Good, large blooms of standard sorts can be had at 15c. each, which, according to last year's prices, ought to bring \$4 per dozen. Medium-sized blooms, which ordinarily would bring from \$1.50 to \$2 per 100, are freely offered at 8c. and 10c. each, and for small flowers anything from 4c. upward is taken eagerly.

The carnation crop is not heavy by any means, and prices remain as quoted last week.

Bride and Bridesmaid roses hold at fairly steady prices, but this is only accounted for by the very few that are coming in compared with the number usually seen on the market at this time. While the special grades of these roses do not sell at figures that are satisfactory, it is a noticeable fact that number two grades continue to bring \$1 to \$1.50 per 100. This would seemingly point to the fact that it is not the larger retail stores that are using roses at this particular time. American Beauty are very plentiful just now and accumulate from day to day; in order to effect clearances occasionally, specials, along with other grades, have to be unloaded at prices far below those quoted in our table.

Violets have not yet become plentiful, and there is a rumor that they are not likely to be for some time, the weather or some other influence having affected the plants in such a manner as to make crops quite short. On account of the scarcity of violets, prices are being maintained fairly well.

CHICAGO.—It is not always the unexpected that happens, and last week was but the repetition of conditions which pervade the market annually when chrysanthemums become plentiful enough to block the sale of other stock and of themselves. Probably, so far this season, prices have not suffered to the extent that they have in previous years; however, there is plenty of time. Carnations began to feel the pressure by the middle of last week and have not recovered, but, as may be said also of chrysanthemums, they clean up pretty well every day, though there has been considerable breaking of prices. Roses appear to be holding their own better, and some excellent stock is now seen in the various stores. Violets have not been coming to the market in excessive shipments, just about enough to cover demands, it would appear. Lily of the valley and longiflorum lilies continue in good demand. Ferns and other greens are in normal call; bronze galax leaves still hold at about double price, which they recently reached. W. K. W.

ST. LOUIS.—We have just passed another week of ideal Autumn weather, and the situation of the flower business remains unchanged. According to some of our leading retail store men, things are still unsteady. Hardly any social events of any note have as yet taken place; a few small weddings, dinner decorations and funeral work constituted about all that was going on the past month. This month, though, much is expected from society in the way of weddings, receptions, in which the florists' art will play a prominent part.

Interviewing our wholesalers Monday morning, they say that stock of all kinds has been plentiful the past week and prices very low, owing to the light local demand, though shipping trade was, generally speaking, good. Chrysanthemums have the call at present, with \$3 per dozen top price for extra fine stock; next choice, \$2 down to 50c. per dozen; very small stock goes at \$1 per 100. Carnations are holding up pretty well and not many are going to waste; extra fine Enchantress, Mrs. T. W. Lawson and Lady Bountiful bring \$3 when long in stem; the bulk, though, sell at \$2 and some at \$1.50 per 100. Roses are becoming a glut, and the very best hardly realize over \$5 in small lots. Richmond, Killarney, Bridesmaid and

Bride are very plentiful, and the bulk of them in 1000 lots did not bring over 2c. Extra long, fancy American Beauty are having some call at \$4 per dozen; these are not over plentiful; medium-stemmed and short ones are in plenty, with price according to length of stem. California violets are becoming better these cold nights in color and stem; the best sell at 35c. per 100. Of this stock Kirkwood promises to furnish the bulk of what comes to this market.

Lily of the valley looks fine, but the demand was not so good last week; \$4 per 100 is asked for the best, while some sell at \$3. There is no stock from outside, as frosts have killed everything. Smilax, asparagus, adiantum and galax sell well; common ferns are in plenty at \$1.75 per 1000.

ST. PATRICK.

PHILADELPHIA, PA.—The shipping trade is keeping stock moving very well; local business is not what might be expected at this time of year. American Beauty roses are selling at from \$3 to \$4 per dozen for the best. Teas are more plentiful and of much better quality; a few choice flowers bring \$10, but most of the stock sells at from \$6 to \$8 per 100.

There are no large prices being obtained for chrysanthemums; all varieties are moving off nicely, the top price being \$3 per dozen.

Carnations are in better demand at \$2 to \$3 per 100 for the best. Gardenias are more plentiful at \$6 per dozen. Lily of the valley realizes \$3 to \$5 per 100, and is moving well. Double violets are not in quite sufficient quantity to fill all demands at 75c. to \$1; large singles, 50c. per 100. Cattleyas are more plentiful at \$50 to \$60 per 100.

Asparagus, ferns and smilax are in rather too large supply for present demands. DAVID RUST.

BOSTON.—We are right in the middle of the chrysanthemum season and trade is never very brisk then. Prices have varied but little for a week past. Roses have greatly improved in quality, but values have not advanced with the quality. Some very fine American Beauty are in, and Richmond and Killarney are both better than they have been this season. Bride and Bridesmaid, are good, and there seems to be fewer of the small grades than there were. Carnations are good; white varieties seem scarce at present. Violets are of better quality, and prices are a little stiffer. Lilies are scarce. Lily of the valley sells well. Chrysanthemums are the ruling flower; the yellow and pink varieties sell best, and prices vary according to the size and quality of blooms. J. W. D.

INDIANAPOLIS, IND.—The market was somewhat burdened with the wealth of material heaped upon it the past week. The variety of flowers is much greater and the quality finer than at any time since Spring. Funeral work is regularly received and aids materially in reducing the accumulated stocks. Chrysanthemums, all kinds, all sizes, all colors and prices, play the leading role in the flower world; the general wholesale range in price is from \$5 to \$25 per hundred. Retail prices range from \$1 to \$6 per dozen, those at \$3 to \$4 being most salable. Sprays of Ivory and other small varieties are always in demand at fancy figures. Pompons are more popular than ever with the flower buyers this season, and are not, as yet, equal to the demand. Well-grown plants are brought by the hundreds to the flower centers at 25c. to \$1, wholesale, and 50c. to \$2.50, retail.

Violets, unlike other flowers, are not overshadowed by the chrysanthemums and sell readily at 50c. to 75c. a hundred. Lily of the valley, too, moves briskly at \$4 a hundred. The call for carnations has eased materially, but prices have not declined; \$2 to \$3 a hundred is asked for them. Roses, although of superior quality, are inclined to accumulate; bargain prices are at times quoted for them. American Beauty are certainly immense at \$5 to \$30 a hundred. Bride and Bridesmaid bring \$3 to \$6. Killarney sell quicker than others, at \$5 to \$7 a hundred.

Harrisii lilies and callas, the first time this Autumn, find trouble in maintaining their regular price, \$12.50 to \$15 per hundred. Indoor dahlias are finding but little sale at \$2 to \$3 a hundred.

LILIUM GIGANTEUM

LARGE SURPLUS

Cases containing 300 bulbs, size 7-9 inch, \$21.00 each.

Cash with order.

THE YOKOHAMA NURSERY CO., 31 BARCLAY STREET, NEW YORK

A few sweet peas and cattleyas, also mignonette, lend variety to the market.

About the only scarce article is smilax, at \$12.50 to \$15 a hundred. Several of the local growers are advantageously shipping their output to distant markets. I. B.

NEW BEDFORD, MASS.—Trade remains about as usual. The supply of flowers just now is equal to the demand. Carnations are looking fine and healthy; the blooms bring from 35c. to 50c. per dozen, retail. Roses are now coming in of fine quality; these bring \$1.50 per dozen, retail, for the best. Violets are in poor demand just now; 50c. to \$1 per hundred retail is the price asked. Early chrysanthemums are all over. Alice Byron and other mid-season varieties are now coming into bloom. There will be a few late sorts for Thanksgiving, Jeannie Nonin being a great favorite here as a late white.

Fred Reynolds, formerly with R. E. Noftz, has opened a new flower store on Water street.

Funeral work is quite heavy, using up lots of white stock.

All outdoor flowers are now gone, and bulbs are being planted in their place.

There will be a good supply of flowers for Thanksgiving Day.

Most of the florists are now doing quite a lot of newspaper advertising.

Wm. Mosher is now running, besides his own greenhouses, those of Wm. Kroeber on North street. Mr. Kroeber is now somewhere in Virginia.

HORTICO.

WASHINGTON, D. C.—The Washington market is at last enjoying a rest on dahlias; killing frosts and ice were general during the middle of last week, and Saturday wound up the dahlia season. Bunch chrysanthemums from the outside seem to have taken the place of dahlias, and on Saturday the markets were glutted by the former from the country people who inadvertently work an injury to the organized trade by selling indiscriminately. The prolonged drouth has injured all outside chrysanthemums and the presence of ice would indicate that they cannot last much longer unless protected. On all other classes of flowers the market was very good, and qualities up to the average at this season. The demand is steadily increasing each week and business will soon attain normal proportions. J. L. C.

Cincinnati.

Trade News.

We are still doing a good business with a nice lot of flowers on hand. I look forward to trade brightening up still more, owing to the Catholic holiday, All Souls' Day. At this time the florists near the cemeteries have all they can do. E. Mack of Price Hill, G. Braun's Sons, R. Witterstaetter and Frank Schneider will have all they can do on October 31 and November 1, 2 and 3. The flower market always puts on a holiday appearance for the occasion. Cheap flowers, as a class, are much desired, but there is some call for the better grades. Green moss wreaths, 10, 12 and 14 inch sizes, sell remarkably well for this occasion, and when I wanted to increase my order for 10 and 12 inch sizes, I was politely informed that my money was no good; all sold out.

Chrysanthemums are still queen of the situation and are selling fairly well. Carnations are not equal to the demand. Roses are a little ahead of the call, and lily of the valley are selling fairly well.

The first Major Bonnaffon and Ivory of the season were received October 28 by the writer from George Bayer of Toledo, O. There is no one who does these two grand old varieties so well as Mr. Bayer and his grower, Miss Winston. Minnie Wanamaker will come a little later. E. G. G.

CHANGES IN BUSINESS.

BEATTY, O.—The Fairview Floral Company of Beatty, Clark Co., \$10,000, has been incorporated by Clarence H. Kay, Mary S. Kirkpatrick, Clark E. Glenn, George D. Leedle and Albert K. Hahn.

CAMBRIDGE, MASS.—John McKenzie, florist, has removed from Somerville avenue to 1927 Massachusetts avenue. His greenhouses are on Whittemore avenue and Magoun street, North Cambridge Junction.

PLATTEVILLE, WIS.—Messrs. Schaefer and Reinke, have established a greenhouse plant consisting of a residence and office, boiler room and four modern greenhouses—one 65x25 feet and three 50x320 feet each, heated by steam.

OKLAHOMA CITY, OKLA.—The firm of Davis S. Beach & Sons of Oklahoma City and Bridgeport, Conn., florists, has been incorporated with \$100,000 capital stock. The incorporators are Davis S. Beach and J. H. Beach, Jr., of Bridgeport; E. V. Remington of Oklahoma City.

PHOENIX, ARIZ.—The Farmers' Nursery Company has been incorporated with a capital stock of \$100,000. The officers are Allen C. Smith, president; Edwin M. Miller, vice-president; Alvirus E. Snow, secretary and treasurer. The firm will do a general nursery business.

FIRMS WHO ARE BUILDING.

DOVER, N. H.—C. A. Davis built four new greenhouses this season.

BLOOMINGTON, ILL.—The El Paso Carnation Company has completed the addition to its plant. Four new houses have been built and about three-quarters of a mile of macadamized walks have been put in.

ON LONG ISLAND, Henry Butterwick, Jamaica South road, is building three greenhouses, 100 x 16 feet, for growing carnations; Henry Brockman, Woodhaven, three greenhouses, 100 x 16 feet, for vegetables; J. C. Reimels, three greenhouses, for vegetables, and Steve Schmieg, Maspeth, N. Y., three greenhouses, 100 x 20 feet, to grow vegetables. B.

NEWPORT, R. I.—All the plants in the greenhouses of the J. M. Hodgson Company have been appraised at a value of \$1200. By order of the receiver the contents of the greenhouses will be disposed of at auction on November 4. A few years ago these greenhouses contained a good stock of salable plants, but now the great bulk are not in a marketable condition, hence the small amount of the appraised value.

D. M.

Toledo, O.
News Notes.

A lively meeting was the last one of our Florists' Club. The election of officers was on the program and an exceptionally large attendance was the result. As the old officers had done their level best to help the club, they were rewarded with re-election, but Mr. Peck, our treasurer and secretary, resigned and J. L. Schiller was elected in his place.
Much discussion followed the suggestion of a chrysanthemum show and it was decided to have one on any day between the 10th and 20th of November. A committee of two, consisting of Will Krueger and J. L. Schiller, has full sway and we hope they will make good. This is principally an affair to interest the public and draw the nearby florists to town to promote good fellowship.
The Detroit Florists' Club will have an outing to Mt. Clemens on November 1, and have invited us to join them; we of course have gladly accepted and whoever can possibly get off will surely go, as we know that the Detroit boys will do all they can to make it enjoyable for us.
Mrs. Peck is on the sick list, but is now getting better; on account of her illness Mr. Peck wants to dispose of his retail place on Broadway and confine his attention to his new establishment, where now the finest carnations in Toledo are grown. This will relieve Mrs. Peck and give her the rest she badly needs.

WHOLESALE FLORISTS

222 Oliver Avenue PITTSBURG, PA.

Pittsburg.

Trade Notes.

Business continues satisfactory. While cash sales over the counter are not so numerous, wedding orders and other functions keep some of the dealers quite busy. There is an abundance of good stock on hand; although chrysanthemums are in season there are plenty of good carnations and roses. Prices are reasonable—about the same as last week. The demand is mainly for chrysanthemums; it is also fairly good for carnations, but roses are not much asked for.

Plant trade was somewhat checked by the frosty spell of weather, yet the market stands are well supplied with stock. Meischke of Castle Shannon is cutting fine chrysanthemums, carnations and roses, which are handled by G. and J. W. Ludwig in the Allegheny market. Randolph & McClements of the East End have been very busy lately with good wedding orders; two or three a day is nothing unusual, and the prospects for the next few weeks are very bright.

Several of our florists have been making a specialty of \$1 cut flower boxes, nicely filled with assorted blooms, which sell readily.

Nursery stock, such as trees and shrubbery, is selling better each year. Privets are used everywhere and seem to thrive well. Planting in the Fall seems to have the preference.

Tuesday, November 5, is the date of the next meeting of the Florists' Club and it should be well attended, as a fine exhibit of chrysanthemums will be shown. President Jones is untiring in his efforts to procure the best blooms from the home growers as well as from outside, and no doubt it will be the banner meeting of the year.

The Ziegler Company, Inc., is making good progress with its new store room in the East End, and when completed the concern will have one of the finest establishments in the city. The conservatories connected with the store are almost finished and are already stocked with a fine collection of decorative plants.

One of the most complete florists' stores in the country is that of Randolph & McClements in the East End. The store room is very large and elaborate, with fine windows for display; and the conservatories attached are well stocked with plants of all sorts. There are plenty of iceboxes and cool cellars for receiving and keeping flowers with special rooms for putting up work, for wire designs, baskets, ribbons, for special designs and necessities for weddings, fine offices on the second floor and a covered shed connecting in the rear where six vehicles can be loaded or unloaded at one time. The firm employs many men and has about 20 head of horses for use in its business at the store and the greenhouses, which latter are also quite extensive.

E. C. REINEMAN.

SPRINGFIELD, MASS.—The item in the issue for October 19, page 540, copied from some other paper, is an error. There is no T. D. Brown in business here; neither are there any greenhouses on West street.

W. F. G.

Peter Reinberg, in the same range with his stock of Mrs. Marshall Field, is growing a fine lot of Kate Moulton roses from which he is now cutting.

As may be expected, the crops at E. Buettner's Park Ridge (one hundred and thirty-five thousand square feet) range of glass are in prime shape. Mr. Buettner is a born grower of flowers, one of those expert culturalists possessing the happy faculty of discerning the direct causes of success or failure, which may be designated as a natural gift rather than an acquirement, with whom it is not enough to grow a crop successfully, as he must know in addition what contributes to that success and he generally finds out. In carnations, in addition to several houses of standard sorts he is giving a good trial to White Perfection, White Enchantress, Winsor and Aristocrat. Bride, Bridesmaid, Richmond and Killarney comprise his stock of roses. A number of houses of chrysanthemums of the medium sizes are now being marketed, to be followed by stevia and Paper White narcissus, which will be succeeded by lilies for Easter. Two houses of mignonette of a strain of his own will soon be ready for cutting from, and seventy-five thousand tulips will later be brought in.

Speaking of double violet growing, which, owing to failure, has been so very generally abandoned in this section, Mr. Buettner attributes the difficulty to too great a variation being allowed the plants between day and night temperatures in the Fall, his theory being that when a plant is allowed to get so cold at night that the circulation of sap entirely ceases and in the bright warm days of Fall is forced almost immediately again to high pressure, disease is sure to follow. He claims that with sufficient care there should be no difficulty in growing violets here; but he considers high grade carnations more profitable.

One day last week, with the statement that she purchased many flowers to dispense among the poor, "Lucille Bennett" paid for two dozen roses at fifty cents a dozen with a worthless check and walked off with eleven good dollars, from Mrs. M. Komble's flower store at 433 Irving Park boulevard. The stranger was well dressed and worked the same bunco scheme on other North Side tradespeople.

F. Lautenschlager, who has been traveling in the East since the Philadelphia convention in the interests of the Kroeschell Brothers Company, has nearly reached home after a successful trip, and will be on hand for the flower show, where he is on several committees. A number of excellent photographs of greenhouses taken in his travels, which have preceded him, denote that Mr. Lautenschlager is becoming quite expert with the camera. Kroeschell Brothers Company report business, good but an unusual number of telegraph orders received within the past two weeks would seem to imply that some of our florist friends lacked forethought in completing their arrangements for the Winter.

There are, at a conservative estimate, within a radius of fifty miles of Chicago, two thousand men in the florist business, private gardeners, seedsmen, greenhouse material dealers, park and cemetery attaches and with other kindred affiliations who are eligible to membership in and who would be welcomed by the Chicago Florists' Club. They all need the club and the club needs them. Why not get together?

A. F. Beyers, accompanied by Mrs. Beyers, of South Bend, Ind., was in the city last week procuring Fall supplies.

A. McAllister, hale and hearty from Wheaton, was calling on friends here last week.

Carl Niemann, who was formerly with the West Chicago park system, obtained four acres of land on the old Niemann farm at Norwood Park three years ago and with a relative as a silent partner erected a neat range of five houses which are entirely devoted to carnations. Success has attended him and last January he bought out his partner's interest, and additional glass at no very distant date is a probability. Standard varieties are largely grown, and the

neat appearance of the houses and
 thrifty condition of the stock speak
 for Mr. Niemann's ability as a
 grower.

J. W. Howe, son-in-law of George
 R. Scott, has perfected and patented
 a machine for the manufacture of
 box loops, an important item in the
 making of florists' wire designs being
 the small wires or loops which hold
 the larger wires in place, and is fur-
 nishing a number of the design
 makers in this city with the finished
 product.

Just at the present time there
 seems to be a great uncertainty
 among the glass dealers as to prices
 for next year's delivery; however,
 within a week or two it is expected
 that the atmosphere will be clearer.

H. E. Klunder opened his new
 store at Forty-third street and Drexel
 boulevard on Tuesday, October 22.
 It is said to be one of the most ar-
 tistically finished and furnished re-
 tail flower stores in the city.

Before the Chrysanthemum Com-
 mittee appointed to examine seed-
 lings and sports, consisting of J. B.
 Deamund chairman, Andrew McAdam,
 and George Asmus, at the first day,
 October 26, the Poehlmann Brothers
 Company showed some handsome
 specimens of "Virginia Poehlmann,"
 a superbly finished, very deep, early
 white sport of Mme. Paul Sahut, an
 Australian variety sent out a few
 years ago. This sort shows a very
 even habit, only one cull being de-
 tected in a bench of over seven hun-
 dred. It is named after August
 Poehlmann's little daughter.

At a meeting of the Western Pa-
 per Box Manufacturers' Association,
 held at the Great Northern hotel in
 this city last week Thursday, resolu-
 tions were passed denouncing the
 methods of the manufacturers of
 strawboard in increasing the price of
 stock, and if these resolutions are ig-
 nored the association threatens to
 build mills of its own.

It is difficult to imagine and would be
 more difficult to find a more beautiful
 store than Fleishman's Van Buren street
 establishment in its enlarged and com-
 pleted form. The entire walls are mir-
 rored and the furnishings and fittings
 are all on a very elegant scale. Mana-
 ger Wienhoeber reports October business
 as far in advance of its predecessors.

The annual chrysanthemum show at
 Lincoln Park greenhouses, which will be
 very interesting on account of Mr.
 Frey's seedlings, will open November 3
 and for ten days will be open day and
 evening, after which the buildings will
 not be lighted and will be open in the
 daytime only.

C. W. McKellar, in addition to his
 regular lines of orchids, is at present
 receiving a miscellaneous assortment of
 very attractive varieties. Dendrobium
 formosum is meeting with particularly
 good demand.

The Chicago Rose Company has
 moved the office back to the middle of
 the store, thus largely increasing the
 facilities for its show window.

THE BEST WAY to collect an account is to place it with the National Florists' Board of Trade

56 Pine St., New York

WHY? Because many debtors will pay the
 Board fearing otherwise a bad rating in our
 Credit List. Full information as to methods
 and rates given on application.

WIRED TOOTHPICKS

10,000, \$1.75; 50,000 \$7.50

MANUFACTURED BY

W. J. COWEE, BERLIN, N. Y.
 Samples free. For sale by dealers.

Vaughan's Seed Store received the
 first of the week an invoice of half a
 carload of prince's pine, or bouquet
 green.

Though J. A. Budlong Company was
 concerned a short time ago about its
 stock being somewhat late, it has come
 along in excellent condition, Richmond
 roses and chrysanthemums being very
 fine.

A large number of dealers participated
 in shipping a quantity of flowers to
 New Orleans on Monday and Tuesday
 for All Saints' Day.

Mrs. Potter Palmer has granted the
 use of her name for Poehlmann Brothers
 Company's new rose, which for identi-
 fication has been called the Morton
 Grove. Under the new name it will
 be exhibited at the flower show and will
 be registered and disseminated during
 the coming Spring.

October has been a peculiar month,
 say the old-timers, with very little reg-
 ularity or stability to the business from
 the wholesaler's standpoint. Then the
 quantities of inferior stock which glutted
 the market the first half of the month
 tended to cheapen the better grades and
 lower the month's total considerably.

A. L. Barnett, well known throughout
 the country as the representative on the
 road of the New York house of Reed
 & Keller, mysteriously disappeared in or
 from this city on October 12, or shortly
 thereafter. Probably John P. Degnan
 was the last representative of the trade
 to see him, when on that Saturday even-
 ing they left the Winterson Seed Store
 together at about closing time and parted
 on the corner of Randolph street and
 Wabash avenue near by. At that time
 there was nothing in Mr. Barnett's ac-
 tions or conversation to excite suspicion
 in any way, and when informed of his
 disappearance a few days later we
 deemed it advisable not to publish the
 fact, as it was possible that the missing
 man might have been taken ill in some
 section of the city distant from his hotel
 and taken to a hospital. Nothing has
 been heard from him since, however, and
 his disappearance continues a mystery.

Vaughan & Sperry report the violet
 trade as improving. Although this mar-
 ket has been receiving about all the
 outside stock it could comfortably take
 care of, there are indications and re-
 ports that the crop in the Hudson River
 violet section is running on the short
 side.

Wieter Brothers are now in the midst
 of a heavy out of excellent chrysanthem-
 ums, and they promise to have a con-
 tinual supply of high grade blooms for
 some weeks to come. Their list of va-
 rieties is a long, varied and interesting
 one.

In the supply department at the A. L.
 Randall Company's, a fine line of rustic
 goods has just been received among other
 attractive lines for the Christmas and
 Winter season. WILLIAM K. WOOD.

Johnstown, N. Y.

Thomas W. Barson has added a new
 house for roses to one of his places on
 the Gloversville road. It is a handsome
 house of most improved methods of con-
 struction. Mr. Barson was late in get-
 ting his house finished and only a few
 weeks ago got his roses planted. On
 this account he is not looking for any
 immediate results, but is pleased that the
 house is complete and stock in, and can
 wait. He will have sufficient stock at
 his place on North Main street to hold
 his trade until his new house comes on
 in the early Spring.

Wollager Brothers on O'Neill avenue
 have also built two houses the past
 Summer. These will be used for car-
 nations another season. The fact that
 they have been delayed in getting their
 boilers and pipes will prevent their
 using the houses this Fall. They hope,
 however, to have them ready in a few
 weeks, so as to get a good lettuce crop
 this Winter and then give them over to
 flowering stock another season. These
 industrious young men combine the
 happy triplicate condition of being gar-
 deners, florists and farmers. They make
 a good showing in the net proceeds of
 the combined industries, so much so, as
 to enable them to extend and improve
 from time to time. J. M.

YOUNGSTOWN, O.—Harry Walthers
 has entered the employ of George
 McLean, North Phelps street.

Kalamazoo, Mich.**Trade Notes.**

Retailers report business quite brisk at the present time, with prices advancing all along the line. Killing frosts and bright weather are the chief causes of the boom, and the immediate future promises a continuance of the present conditions.

Chrysanthemums are in abundance and find quick sales at \$1.50 to \$3 per dozen. Roses of good quality bring \$1. while carnations, which are somewhat scarce yet, are quoted at 40c. and 50c.

Van Bochoves are cutting lilies and Killarney roses quite largely just now; pot plants for decorative purposes are also selling quite freely.

The Fall openings did not seem to call for much assistance from the florists this year, and the latter do not much regret it, as they entail a lot of work for little money.

At Fisher's store they are pushing the new rose, Mrs. Marshall Field, and say that it is one of their most popular sellers. Mr. Fisher is most enthusiastic over the business prospects for the coming season and is well satisfied with the past year's business.

Van Bochoves are cutting both Windsor and Aristocrat carnations quite freely; the latter seems to promise well for the future. Carnations in general about town are looking well, all the old standbys are holding their own and will be ready for market by the time the chrysanthemums are on the wave.

James Fraser, that indefatigable Mason, was elected to the chief office of the Order of the Eastern Star in Michigan at the last annual meeting held in Saginaw.

The sale of Fall bulbs has been quite satisfactory and most of the trade is handled by the local florists instead of by the drug stores, as it used to be. This is another step in the right direction. S. R.

PLEASANT HILL, MO.—In a letter dated October 25, 1907, George M. Kellogg writes:

"I wish to say that it is just four weeks since our destruction caused by an exploding boiler, which wrecked our entire place for a time, but to-day we are in fair shape. It took 1,000 boxes of glass to repair the 67 houses 250 feet in length, all of which were damaged by falling fragments from the boiler room. To-day all the houses are repaired and glazed. We have two large and two small boilers in running order, all giving good service, in place of the five boilers that were wrecked. We will put in two or three the first of next month, which will make us safe for the severest winter.

"The repairs and extra expense have amounted to \$20,000 so far, but our buildings are much improved. The Lord sent us ideal weather, and the men worked with a will. One great help was that we had a carload of glass on hand when the accident happened, and by the time that was used in repairing we had another carload on hand, which I bought in Kansas City. Now we want to buy another carload for reserve, so if any further accident happens we will have a start. Can you put me in correspondence with a man or firm that can law down in Pleasant Hill, Mo., 500 boxes 16x16 or 16x18, double S. A. glass for spot cash?

"I thank you for your many kind words and favors, and I also wish to thank, through your paper, the many friends who sent me words of sympathy."

Mr. Kellogg has received from Miss Isabel French, an instructor in the Blanche Kellogg Institute at San-turce, Porto Rico, a school founded there by Mr. Kellogg, a letter expressing deep sympathy with him in his misfortune, and telling of the good work doing for the children of that island by the institute in question, which Miss French says, "will, in a few more weeks, stand as a monument of your faithful stewardship over the goods with which God blessed your labor."

ROBERT SIMPSON,
CLIFTON, N. J.

Hammond's Grape Dust

KILLS MILDEW ON ROSES, CARNATIONS, VIOLETS AND CHRYSANTHEMUMS

ROBERT SIMPSON, Rose Grower

Clifton N. J., Oct. 11, 1907

Dear Mr. Hammond:

In reply to your inquiry regarding my experience with Grape Dust, would say that I am glad to be able to say a good word for the article in question, because I have found it so generally satisfactory when used for mildew on roses.

I do not know anything about its constituents, nor do I care so long as it does the work, and is as economical as anything else on the market.

During the summer when the steam pipes cannot be brought into use to check mildew, and dusting over the foliage has to be resorted to, we prefer to use Grape Dust rather than sulphur, because it is so much lighter and finer in texture: a given number of pounds will cover more than twice the number of plants; will cover them more thoroughly, and Grape Dust can be put on with a bellows in about one-fourth the time that would be required for Sulphur.

The fact that I have used it continuously for ten or twelve years should prove to you that I consider it the best article on the market for the purpose for which it is used.

With best wishes I am,

Yours very truly,

ROBERT SIMPSON

S. JACOBS & SONS,

GREENHOUSE CONSTRUCTION MATERIAL

1365-79 Flushing Ave.,

BROOKLYN, N. Y.

Springfield, O.

At the meeting of the Springfield Florists' Club, held October 14, charter president John M. Good occupied the chair, and after thanking the members for hearty co-operation during the first year of its existence, introduced the president-elect, George H. Mellen, who distributed fragrant cigars. Mr. Mellen spoke in appreciation of the honor conferred upon himself, congratulated the club upon the good work accomplished, and outlined plans for the ensuing year.

Vice-president-elect Charles W. Schmidt beamed approval in his genial "Sunny Jim" smile, while George D. Leedle and Leman Bradford respectively assumed the duties of secretary and treasurer, the latter taking in charge a balance of \$82.43 turned over by his predecessor, Roy McGregor, who reported all bills paid.

Standing committees were announced by the president, as follows: program, John M. Good, Leman Bradford and Christian Binning; entertainment, Chas. W. Schmidt, Opha Jackson, and Ed. Kreigbaum; membership, Chas. M. Niuffer, Wm. H. Reeser and Bert C. Blake; grievance, Frank E. Good, Chas. W. Unglaub and John A. Doyle; publicity, Geo. D. Leedle, Roger H. Murphy and Harry C. Reeser.

The names of Albert K. Hahn and Jesse M. Good were proposed for membership.

The subject of Civic Improvement was quite generally discussed, it being freely conceded that for the greatest plant shipping city on earth, Springfield was yet considerably lacking in the matter of central heavy spots and well-kept yards both front and rear. The utilization of vacant lots for the growing of something other than weeds, if nothing better than potatoes, was advocated, and the planting of a bed or two of cannas or similar ornamentals on the esplanade in place of a few slabs of cement, was suggested, for which some of the

floral concerns would be willing to supply stock gratis, if need be, in order to make a start in arousing public spirit on the idea. Mention was made of the effect which might be produced by photographing a few hackyards of prominent citizens, well kept and otherwise, and printing half-tone cuts as has been done by some of our leading journals; the sharp contrasts would prove quite surprising, and it behooves the "prominent citizen" to clean up and plant something before the club turns loose its "Civic Improvement Committee" which will be announced at the meeting in November.

But some of you evidently won't learn, for if you did, then the wooden eave with nailed roof bar construction would not be considered by you for

Seed Trade Report

AMERICAN SEED TRADE ASSOCIATION

George S. Green, Chicago, Ill., presi-
dent; M. H. Duryea, New York, first
vice-president; F. W. Bolgiano, Wash-
ington, D. C., second vice-president; C.
E. Kendel, Cleveland, O., secretary and
treasurer; Leonard H. Vaughan, Chi-
cago, assistant secretary.

GERMAN LILY OF THE VALLEY.—Latest
advices from a reliable source are to the
effect that the 1907 crop of lily of the
valley is only 50 per cent. of last sea-
son's crop; many fields of pipes have
made precocious bells, owing to over-
abundant rains from July to Septem-
ber 15.

OCEAN FREIGHT RATES ON SEEDS.—
The Department of Agriculture has just
issued a bulletin (Number 67, Bureau
of Statistics) on "Ocean Freight Rates
and the Conditions Affecting Them,"
which should be of considerable value to
all who export horticultural products.
The bulletin shows that the prevailing
mean rates, 1903-6, from New York
were, on clover seed, from 16c. to 20c.;
on Timothy seed, from 20c. to 24c.; and
on blue grass seed from Baltimore to
eleven European ports—Amsterdam, Ant-
werp, Belfast, Bremen, Dublin, Hamburg,
Havre, Leith, Liverpool, London and
Rotterdam—from 27c. to 30c. per
100 pounds; and on clover seed from
17c. to 19c.

CHICAGO.—L. W. Wheeler, formerly
of this city and more recently of New
York, is now associated with the Bran-
son Seed Growers' Company of San José,
Cal.

From promises now being made for
future delivery it would appear that of
white and yellow onion seed there will
be about enough to go round, but reds
will be scarce.

The onion set growers of this vicinity
are holding out for ten cents a bushel
increase for growing next year's crop.

and Plants. Illustrated.

PETER LAMBERT, Trier, Germany.
—Catalogue of Roses, with a list of
Novelties, Fruit and other Trees,
Shrubs, Vines, etc. An interesting cata-
logue, particularly in its offerings of
Roses, the firm's specialty.

TOKYO, YENGEI KWAISHA, Ltd.,
Tokyo, Japan.—Catalogue of Pure Japa-
nese Plants, Seeds, Bulbs, etc. An in-
teresting illustrated catalogue, the illus-
trations including colored pictures of a
new herbaceous peony and Adonis davy-
rica.

ROUSTAN, SERVAN & COMPANY,
St. Remy-de-Provence, France.—Cata-
logue of Flower, Field, and Vegetable
Seeds. Special attention is called to the
novelty, Aster sinensis "Regalis" gigan-
teus uniflorus, offered in pure white,
pure blue, rose, and mixed colors.

GERMAIN SEED COMPANY, Los
Angeles, Cal.—Illustrated Catalogue of
Seeds, Plants, Bulbs, Small Fruits, etc.
Printed in the Spanish language. The
firm states that its business in the Re-
public of Mexico is increasing yearly,
and points out the advantage it has
in having its seeds and plants grown
in a climate similar to the one experi-
enced in Mexico.

Seed Trade Notes.

The seed trade all over the country is feeling much more cheerful than a week ago. Certainly no worse time for a money panic could by any possibility have been forced upon us than right at the culminating height of the Fall bulb business, but so quickly has the situation radically improved that a normal business continues. Of course, with our largest dealers there are some bulb surpluses apparent, as the end of the bulb planting season approaches; but these overstocks are many times counterbalanced by the complete disposals of so many more varieties that when the real end of the season does come, the annual bulb bargain hunter will find very little indeed waiting for him.

Regarding lily of the valley, both pips and clumps, all varieties of lilies, especially the auratum and speciosum, the Japanese irises (Iris Kämpferi), and in fact all late arriving stock, the advance sales this season so far have been unusually large. In Lilium auratum and Lilium speciosum, both album and rubrum, the 9 to 11 inch sizes (in circumference) are mostly in demand. Bulbs of this size if sound and perfect will give satisfactory bloom, and can yet be retailed reasonably enough to insure large sales. At present these lily bulbs are worth respectively, as I have just mentioned them, \$8, \$15, and \$9 per hundred, with proper reductions in larger quantities.

The season continuing so open, the seedsmen all earnestly hope that these bulb stocks will arrive in ample time to be distributed and planted this Fall. These stocks should all be here by the end of this month, although in some seasons it has been well into December when they arrived.

Last week I brought up the question of whose customer was the canner, the growers' or the seedsmen's. Of course, on the canners' part they wish, like us all, to purchase where they can do so for the least money, and at the same time get their orders filled as nearly in full as is possible. Naturally the canners are willing and do pay the growers a little more than the seedsmen pay their growers; but has any grower a moral right to give the canner the preference when distributing his yields of seeds? To illustrate and be entirely impersonal, some time ago a large canner showed me his invoice of a very extensive mixed shipment of peas and beans, from one of our reliable growers, and such varieties as Alaska, and Horsford's Market Garden peas, some popular varieties of canning beans, etc., were filled in full (this canner showed me also his contract for these seeds made the year before, at the same time the seedsmen make theirs), when the seedsmen were only getting from 50 to 75 per cent. of their contracts filled, as a general average all over the country. On the other hand, have not the seedsmen themselves to thank for having hammered down the contract prices for peas and beans with their growers, until a fair profit to the grower has been obliterated? It is not so many years ago that the grower of peas and beans averaged from 40c. to 60c. more per bushel on his contracts with the seedsmen than he does at the present time. Such being the case, a grower even in a comparatively short crop year

could get through his season with at least a semblance of a whole skin, but now a yield of two or three-fold (one-fold, of course, being the stock planted) means very heavy financial loss to the grower. It is only in years of great yields (six to eight-fold) that the grower can make anything at the present contract prices for peas and beans. I will talk more about this matter hereafter.

Among all the crop failures of the past season there is one very brilliant exception; I refer to the cauliflower crop; and it is, I think, safe to say that everywhere this crop has done well. The rainy days and even, cool temperatures of the very end of the season turned abruptly what had bid fair to be a dismal failure into the largest and finest yield of cauliflower we have had in years. The result of this satisfactory issue has already created a very active demand for the higher grades of cauliflower seed for 1908—which is very pleasing to the seed trade. From Long Island, New York, one of the great cauliflower growing districts comes the report that last week some \$35,000 worth of cauliflowers were shipped to various markets, through the Long Island Cauliflower Association.

Now that the time has come when it must very soon be decided what seed novelties and specialties will be pushed in our forthcoming catalogues, I hear much disappointment expressed on every hand that the seed of Burpee's two new Spencer sweet peas is not in sufficient supply to be available for all; and even those dealers who were fortunate enough to place early orders will have no way of replenishing to fill out when once their original number of packets engaged have been sold. This condition of affairs will result in much confusion, and money being returned to belated customers, as I predict now that the retail demand will even surpass in enthusiasm and total volume of sales, made immediately when once the general seed catalogues of 1908 have been distributed, the wholesale requests sent to Messrs. Burpee the past few weeks.

I cannot close without expressing my sincere and heartfelt sorrow for the death of my life-long friend, the late O. B. Hadwen of Worcester, Mass. I had known the deceased since my boyhood days, and it was through his inspiring horticultural enthusiasm that I became a life member of both the Massachusetts Horticultural and the American Pomological societies. As a friend (he had no enemies) O. B. Hadwen was lovable, honest, and true; and we shall miss our valued companion. As a scientific horticulturist his loss is a national one. V.

HERB'S NOVELTIES FOR 1908.—The novelties for 1908 offered by M. Herb, Naples, Italy, include Echeveria imbricata, Helianthus cucumerifolius plumosus, Ipomoea purpurea flore pleno striata, Myosotis dissitiflora Elfriede, Bellis perennis flore pleno. The Bridegroom, new things in Comet asters, dark-colored large and early-flowering Brampton stocks, Primula obconica gigantea rubra, Salvia splendens aucubefolia violacea, Hibiscus immutabilis albus, Zinnia elegans flore pleno Savoja; also several vegetable novelties. The list, which is illustrated, has been distributed.

Knud Gundestrup.

Among the younger generation of seedsmen of the West who seem destined to become factors in the trade and who are to be reckoned with in their special lines may be mentioned Knud Gundestrup of 4273 Milwaukee avenue, Chicago, who for the past few years has made a specialty of onion sets, Danish cauliflower seed and English mushroom spawn, and who through advertising, particularly the spawn, has become well known to the trade throughout the country.

Mr. Gundestrup was born in Denmark in 1867 and after leaving school at the age of fifteen entered his chosen profession, the seed business, which he followed through its many ramifications until he emigrated to this country in the Fall of 1897 just ten years ago last month. The war with Spain was brewing and before he became permanently located in business hostilities materialized and,

Knud Gundestrup

having gone as far as the law would permit toward attaining his citizenship, he entered the service of his adopted country in the volunteer militia and participated in several engagements in the Cuban campaign, including the taking by the American troops of San Juan Hill. Returning to Chicago he entered the employ of Vaughan's Seed Store where he remained in various positions until 1904, when he took advantage of the opportunity to purchase a small seed business at Jefferson Park, a section of Chicago surrounded by a large area devoted to market gardening and offering a good demand for the line of seeds and farm implements and tools of which his stock consists.

From the first he prospered, and two years ago he erected an onion set warehouse, 64x80 feet, with a capacity of something less than 20,000 bushels. This building is on the line of the Chicago and Northwestern railroad, has a spur track, and is located within a few minutes' walk of the store. Last year he demolished the old seed store and built in its stead a modern brick, two-story structure, the street story of which is reserved for his business, while the second story is arranged and leased for lodge room purposes. At present he is constructing a second onion set warehouse, 80x80 feet, to accommodate in excess of 20,000 bushels.

The business has recently been incorporated under the name of the Kirkeby & Gundestrup Seed Company, with a capitalization of \$50,000, of which Knud Gundestrup is president and Marius Kirkeby, who is well known to the produce trade with which he has been connected in this city for the past twenty years, is secretary-treasurer.

The company has just purchased the seed business of D. J. Tamminga at 10818 Michigan avenue in the southern part of Chicago, in a section where onion set growing and

market gardening are largely carried on.

Last Summer Mr. Gundestrup spent some months in Europe and besides traveling spent much time in perfecting arrangements for his continued supply of English mushroom spawn, and Danish cauliflower seed, which latter may be termed his specialty of specialties.

Mr. Gundestrup is an agreeable, genial man, of powerful physique, was married since coming to Chicago, has one daughter, and resides in a cosy home near his business headquarters in Jefferson, Chicago. W. K. W.

Grafting and Budding Lemon and Orange.

I have a lemon and orange six years old in one pot, to pot separately, and graft. Can I do this potting now? I have never grafted oranges. When, how and in what condition of the plant can it best be done? Can they be budded successfully? E.

—If the orange and the lemon plants are in a dormant state, or if you could separate them without much disturbance of the ball, you could do the work now. If growing freely, it would not be safe to separate them without a ball of earth to them. Most likely they are dormant at this season.

Budding of these plants is usually employed. Do it at any time when they are growing freely, as then the bark will open to admit the bud. Conditions are usually favorable toward Spring.

Sowing Clematis Seeds.

The great beauty of the Clematis paniculata and its late blooming make it one of the most popular of all clematises, if not of all vines. The old Clematis flammula was valued and still is, but it is not the abundant bloomer the C. paniculata is, and besides, its flowering is over before the close of August. The practice of taking vacations is now almost universal, and these vacations end with August. September is the month for returning home, and when home is reached there is the Clematis paniculata in the glory of its display of sweet-scented white flowers. This has made it popular, and its popularity is ever on the increase.

This clematis is easily raised from layers or from seeds. As it seeds freely and the seeds germinate well, there is no need to resort to layering. The seeds grow well sown in Spring in a half shady place outdoors, or in a greenhouse, sown in February. For covering the seeds use very light soil, especially if outdoors, even if almost entire sand, as the seedlings force their way through the covering better than when the soil is of a heavy nature.

Protecting Roses in Winter.

With such roses as are not quite hardy there must be some little protection afforded in Winter to lessen the damage hard freezings do them. Occasionally recommendations are made to dig up the plants and bury them underground for the Winter. This is very well where plants have to be preserved for selling purposes, but otherwise the trouble of digging is saved and the plants are hardly the worse for what freezing they get when left out and covered. In the case of the ever-blooming sorts, there is needed but the preserving of a few inches of live wood at the base of growth and but little covering is required to effect this. The old-time plan of placing a spadeful or two of soil around the plants is hardly improved on to-day. It needs but a few minutes to dig and place the soil there. The shoots can be tied together and cut off at the height the covering of soil is to protect. If preferred the tops need not be cut, but allowed to remain to act as a guide to where the covered bushes are, cutting them down to their live parts when Spring returns. Sawdust, when it can be had, is a good material to take the place of soil; so are ashes. Amateurs who have time on their hands go to the trouble of tying up their bushes with straw and leaves, the whole placed and tied lightly about the bushes. This is very well for such sorts as bloom from their old shoots, such as hybrid perpetual and many running roses do, but only in the colder States are these kinds hurt in Winter, when unprotected. For the ever-blooming section of roses before mentioned there is no need to protect more than six inches or so, as the flowers come from growths of the same season.

Taking Off Layers.

Were it a question of doing the best for the little plants it would be as well not to disturb layers of shrubs and other subjects until Spring, but all of us who live north of Mason and Dixon's line know that everything in a horticultural way that must be done before Spring ends is better done in Autumn, unless there are urgent reasons for not doing it. Layers put down during Spring and Summer are usually noted sufficiently well to be cut off in Autumn, with but few exceptions, and considering what has been said in favor of it, it is well to get ahead with the work now.

Japanese snowball, Hydrangea paniculata, grandiflora, and many of the popular shrubs and trees are prop-

agated from layers, as well as from cuttings, and it is work well done to dig these now, sort them into sizes and otherwise prepare them for Spring planting. When all are sorted and prepared, trench them in, in an elevated site where drainage is assured, covering roots and tops, save the extreme ends, just to show where they are when Spring returns.

Magnolias of the Chinese section are increased from layers to a great extent, as well as in other ways. Unless layered very early in the season, so that an abundant supply of roots has formed, it is better to let them remain for another season, when the roots will be stronger. These shrubs are not sure to live if set out with but few roots; and whether with few or many, they need a close pruning at the time of planting.

Spraying After the Leaves Fall.

It is a great satisfaction to the nurseryman and the florist to be able to offer to a customer stock free of

There are many spraying mixtures on the market, and reports show that what one has found successful another has not. The writer has tried kerosene emulsion, lime-sulphur and scalecide, and while all have been of value the last named has done the most effective work.

A spraying should be given now, both because it will be more effective on the scale than when done in Spring and because it lessens the damage those that are then killed would do all Winter; then when another spraying is given in Spring it should end every live scale.

JOSEPH MEEHAN.

New Rambler Rose Newport Fairy.

Our illustration shows a plant of this rose, two years old, in an eight-inch tub. This novelty is being introduced by the well-known firm of Julius Roehrs Com-

Rose Newport Fairy

Introducers, Julius Roehrs Company, Rutherford, N. J.

scale, not alone in the fact of the tree being clean, but in its being a source of profit as well. The Fall spraying of trees is not being done nearly as much as it would be profitable to do it. It is usually thought of as a Spring job, and so it is, but it is one for Fall as well. Nurserymen and all who sell trees have an interest in advocating spraying. It is now not uncommon to have prospective customers say they would like to plant fruit trees, but they fear the scale. If these people can be assured by the seller, that by spraying twice a year the trees will live and thrive, the sale will be made and this assurance can be given.

At the present time orchard after orchard has ceased to exist; the general scarcity of fruit predicted in these notes some years ago is now upon us, and the worst is still to come.

The failure to appreciate the fact that without spraying the trees will die as well as being often ignorant of the presence of scale is the reason why so many dead orchard trees are to be found. It is really to the welfare of everyone—tree grower, tree planter or not—to take an interest in keeping down scale, for this means a supply of fruit—something we all desire.

pany, Rutherford, N. J., who describe it as follows:

"Newport Fairy possesses the following good habits: Strong, sturdy grower, ever-blooming, good substance and perfectly hardy. We have given Newport Fairy a fair trial at our nurseries, and we can thoroughly recommend same for planting or as a pot plant for Easter forcing. It is without doubt the finest of all recent introductions."

Chrysanthemum Pacific Supreme.

This variety, which was pictured in last week's issue of The Florists' Exchange, and which scored 87 points before the C. S. A. committee at Chicago, is intermediate in color between Glory of the Pacific and William Duckham, being a very delicate shade and yet sufficiently illuminated, so that it may be allowed to fully develop without danger of the usual fading. Height 3½ feet 6 inches in diameter; cut October 20; foliage closely resembles that of Glory of the Pacific, but the plant is more free in growth.

NATHAN SMITH & SON.
Adrian, Mich.

WIETOR BROS.

CHICAGO

THE LARGEST GROWERS OF CHRYSANTHEMUMS IN AMERICA

And this year our List of Varieties and Quality of Stock was never surpassed. As to Quantity, our crop is estimated at 125,000 High Grade Blooms. All Colors. Prices Right.

We had plenty of Early. We have Plenty of Mid-Season. We shall have Plenty of Late.

Chrysanthemum Stock Plants Now Ready

Our Stock of Roses and Carnations is fully up to its usual Standard of Perfection.

WIETOR BROS. No. 51 Wabash Ave. CHICAGO

STOCK PLANTS OF CHRYSANTHEMUMS TRUE TO NAME

WHITE—White Dean, \$1.50 per doz.; October Frost, C. Touset, Mrs. McArthur, Timothy Eaton, Minnie Wamamaker, Convention Hall, W. H. Chadwick, White Jones, J. Nonin, \$6.00 per 100; Geo. S. Kalb, Alice Byron, \$5.00 per 100; Estelle, \$4.00 per 100.

PINK—Rosiere, fine early pink, \$8.00 per 100; Amorita, Mary Mann, \$6.00 per 100; Maud Dean, S. J. REUTER & SON, Inc.,

A. J. Balfour, Dr. Enguehard, Lav. Queen, \$5.00 per 100; Glory Pacific, \$4.00 per 100; J. K. Shaw, \$6.00 per 100.

Syracuse, N. Y.
Accident to L. E. Marquisee.

The many friends and the trade generally will regret to learn that Mr. Marquisee received serious injuries last Monday that providentially were not attended with fatal results. It appears that at 5 p. m. on Monday he was on his way to visit his brother, who is an invalid, to transact some important business. In his hurry in crossing the bridge over the canal he failed to heed the warning bell that the bridge was about to be raised; the consequence was that as he was going at a pretty good clip on his wheel, and the bridge was raised four feet when he fell, lighting on his head. He was picked up unconscious and carried to St. Joseph's Hospital,

CHRYSANTEMUMS

Notes for Week Ending November 2.

To-day finds us just on the eve of the shows again. Like our birthdays, the chrysanthemum exhibitions remind us of the flight of time, and each year these annual shows seem to come nearer together.

When once the blooms are cut, assorted into classes, and put into the cellar to take up a full stem of water for the trip (as we used to read in our geographies that the camel filled up for his journey across the desert!), then the grower can size them up with critical eye, and feel sure that he has Smith, Brown and Jones all beaten to a finish. Carnot and Mease, Vallis and May look prodigiously large; colors are carefully balanced, stems good, foliage fine. The only trouble is that a certain glamor seems to inhabit a cellar, and ten to one, when those blooms are ranged next to the collections of Brown, Jones and Smith, in the exhibition hall, they will have shrunk perceptibly, and happy the exhibitor who can pocket his share of the chagrin with his second premium, and lay his plans for the sweepstakes—next year! If there were no next year ahead of the exhibitor, what a dreary place this world would be!

Of the big new sorts of 1907, the Wells-Pocket set contributes two grand sorts: Glitter, a magnificent yellow of deep golden shade, broad and reflexing, taking on great depth, and with a substantial build and appearance that is very reassuring. We doubt if there is anything better offered this year. Harold Wells is one of the biggest exhibition whites extant; the color is good, stem stiff, and the flower of a build and form that make it appear even larger than its 10-inch diameter. It requires no special culture nor manipulation to make it a grand and sturdy bloom that will travel well and come out bright and fresh.

From England, too, we have Mrs. W. Wells, the most gorgeous shade of tawny, burning orange that has ever been shown in a chrysanthemum; it really seems to radiate warmth and light. Combined with its other fine points, we do not know of another bronze that could stand against it.

Mrs. Harold Wells is a broad-petaled rolling incurved of the type of Mme. Debie, in a bluish pink; a flower that the ladies all rave over, but not a commercial variety by any means.

M. Calvat has given us some fine sorts again this year. What is there in the

climate of Grenoble, or what is his magic strain, that gives him such fine results each year? Nowhere in America is any such percentage of successes obtained from a like number of seedlings, we are sure, for while American growers will not use all of his 25 offerings of this year either commercially or for exhibition, these same 25 sorts, when well done from the proper bud, would make a grand exhibition, even were every other sort debarred from entry.

* Vierge d'Avila is one of the earliest to develop; a light shade of canary yellow, forming a very deep reflexing bloom in which the petals interlace; a refined flower of exhibition type.

President Fallieres is white as snow, with loosely incurved and channeled petals; its purity of color and rounded form are extremely beautiful.

Commandant Mathieu, noted before, is a stunning beauty and must be seen to be appreciated. To begin with, it is a golden, glistening yellow, a perfect color; then the petals are of wonderful length, and curl and incurve into a big ball with depending petals and high incurving center. Stem and foliage are good. We should call this a "fancy commercial."

Tonring Club is a golden yellow of our regulation American commercial type, incurving and broad-petaled, large and round; it is smooth and firm and looks ready for business.

Mme. Vellay Desmeseretz is a very large white, probably the best of the Calvat series, as it scored the highest in France, and shows up grandly here. It is slow in finishing, but gives promise of good color and majestic build.

Other varieties from various European growers are showing fine qualities, and the next ten days will decide which of these will find a place among our aspirants for American honors.

Of last year's novelties, nothing is better than Miss Clay Frick. The one criticism against Wm. Duckham, its unsatisfactory color at times, cannot be brought against its beautiful Scotch sport, for it is purity personified and big and round with splendid stem and foliage. If it shows no serious defect this season, it will probably prove the leading midseason white for a long time to come.

S. A. HILL.

Richmond, Ill.

Coming Exhibitions.

(Secretaries of societies not mentioned here will oblige by forwarding schedules of their respective shows.)

NOVEMBER 6-12.—Horticultural Society of Chicago, Annual Exhibition. Assistant Secretary E. A. Kanst, 5700 Cottage Grove avenue, Chicago.

NOVEMBER 7-9, 1907.—Southern California Horticultural Society, in Blanchard's Hall, Los Angeles, Cal. Secretary Ernest Brauntun, 123 South Los Angeles Street.

NOVEMBER 8-10.—Massachusetts Horticultural Society, Chrysanthemum Exhibition. Secretary, Wm. P. Rich, Horticultural Hall, 300 Massachusetts avenue, Boston, Mass.

NOVEMBER 11-17.—Horticultural Society of Buffalo, First Annual Flower Show. Secretary, John H. Tranter, P. O. Box 904, Buffalo, N. Y.

NOVEMBER 12, 13 and 14.—Pennsylvania Horticultural Society, Horticultural Hall, Philadelphia, Pa. Secretary, David Rust, Broad street, below Locust.

NOVEMBER 12-14.—Florists' Club of Washington, Annual Exhibition. Secretary, Chas. McCauley, Eighteenth and Kearney streets N. E., Washington, D. C.

NOVEMBER 12-15.—St. Louis Horticultural Society, Annual Exhibition. Secretary, Otto G. Koenig, 6473 Florissant avenue, St. Louis, Mo.

NOVEMBER 12-16.—Ontario Horticultural Society, Exhibition of Chrysanthemums, carnations and roses at Toronto. Secretary, H. B. Cowan, Parliament buildings, Toronto, Ont.

NOVEMBER 14.—Worcester County Horticultural Society Chrysanthemum Exhibition. Secretary, A. A. Hixon, Horticultural Hall, 18 Front street, Worcester, Mass.

NOVEMBER 14-16.—Arkansas State Floral Society, Annual Flower Show. Secretary, Charles Vestal, Little Rock, Ark.

NOVEMBER 15-16.—Rhode Island Horticultural Society, Autumn Exhibition. Secretary, C. W. Smith, 27-29 Exchange street, Providence, R. I.

Forcing Ramblers and Hybrid Roses for Immediate Shipment

The right time to buy roses is when they are fresh and well ripened. Roses potted up in the fall or the winter become better established and force better, and are far more satisfactory in every way, and you can retard and force at your leisure. We recommend American-grown "Ramblers." Don't attempt to force imported Ramblers; the general experience is that they are a failure.

We offer exceptionally strong two-year-old dormant, low-budded stock (on Manetti), in the following varieties true to name:

Prices: 65c. for bundle 5, \$12 per 100, \$110 per 1,000, 25 at 100 rate, 250 at 1000 rate.

ANNE DE DIENBACH. Bright carmine.

BALL OF SNOW. Pure white.

BARON DE BONSTETTIN. Dark crimson shaded.

BARONESS ROTHSCHILD. Satiny pink; extra.

CAPTAIN CHRISTY. Delicate flesh-color.

DUKE OF EDINBURGH. Bright vermilion; fine.

FISHER HOLMES. Dark rich scarlet.

FRAU KARL DRUSCHKE. The finest white in existence.

GENERAL JACQUEMINOT. Rich velvety crimson.

GENERAL WASHINGTON. Beautiful red, shaded carmine.

JOHN HOPPER. Beautiful rose pink.

LA FRANCE. The finest light pink.

MARGARET DICKSON. White, pale flesh center.

MAGNA CHARTA. Clear rosy pink.

MME. GABRIEL LUIZET. Light, satiny pink.

MME. PLANTIER. White.

MRS. JOHN LAING. Soft pink; most desirable variety.

PAUL NEYRON. Beautiful dark pink.

PRINCE CAMILLE DE ROHAN. Velvety crimson.

ULRICH BRUNNER. Cherry-red.

AMERICAN GROWN CRIMSON RAMBLERS

The only stock for forcing.

Large plants, 2 to 3 feet, \$1.25 for 10, \$12.00 per 100.

Large heavy plants, two years old, 3 to 5 feet, \$1.75 for 10, \$15 per 100. Extra heavy plants, 4 to 6 feet, \$2.00 for 10, \$18.00 per 100.

THE BABY RAMBLER

MME. NORBERT LEVASSEUR. Strong field-grown plants, \$1.25 for 10, \$12.00 per 100.

THE NEW BABY RAMBLER ROSE

CATHERINE ZEIMET. A very important novelty. A white Baby Rambler rose, larger and better flowers than the type. White with yellowish center. An important fact is that it has the true rose perfume in a high degree. One of the best polyantha types to date, fine forcer. 50c. each, \$5 per doz., \$40 per 100. Extra heavy 75c. each, \$7.50 per doz., \$60 per 100.

THE TREE BABY RAMBLER

Grown as a standard.

The popularity of the Baby Rambler has suggested the growing of it as a tree or standard. The variety is too well known for description; enough to say, it retains all its characteristics of free blooming qualities, etc. 35c. each, \$3.50 per doz., \$25 per 100.

DEUTZIA

GRACILIS. Pot-grown for forcing, \$2 per doz., \$15 per 100.

LEMOINEI. Pot-grown for forcing, \$2.50 per doz., \$18 per 100.

SPRINGFIELD OHIO

THE WEEK'S WORK.

Timme's Timely Teachings.

Gardeners and florists when searching for something that might stand in urgent need of being attended to generally always succeed in finding it. Indeed, there is never much need in hunting for it in any place or at any time. Lack of things that need doing or inability to find them without aid have never been among the troubles complained of by florists.

Nor can it be said that ignorance of how to do the work before them, or unwillingness to be instructed where knowledge is lacking, is strikingly prevalent among them. With the possible exception of the self-sufficient, incorrigible old practitioner, who knows it all, few fail to carefully read and heed their weekly batch of timely hints and seasonal notes. That this has not been done without benefit to the majority of readers is not a matter of doubt, but plainly shown to be a fact, with proofs in plenty everywhere. It would even seem that with all this cultural instruction so generously held forth by our trade papers, every attempt to grow any one of the many things dealt with should be crowned with success. In that we are mistaken. An astonishing decrease in the number of failures has so far not been observed. Growers still have their troubles.

Where the Trouble Lies.

The principal cause of frequent failures, even in the simplest of cultures, may easily be traced to the all-prevailing desire of growers to undertake more in the way of production than they can possibly bring to a successful finish. They eventually find themselves entirely unable to cope with an unmanageable mass of greatly varying cultural duties. Of what use to these growers is the soundest of cultural advice, when through lack of room and time, the scarcity of competent help and the want of properly equipped growing facilities, it becomes impossible to follow this advice?

Speed and thoroughness, when harnessed up in time, are an excellent pair and capable of making away with a pretty heavy load of urgent duties, but seldom pull together unless the reins are in well-trained hands.

There are many other kinds of misfit conditions that block the road to success, many of them not under the control of the grower. But, I incline to the belief that many of the most disappointing are brought about by his own doing in having chosen the wrong road.

Following the example set by some successful grower of certain kinds of well-paying stock is in itself a proceeding that nobody can possibly find fault with, a thing happening every day. But when this is done without first inquiring into the means and methods employed by which this success was won, and without being equally well fixed in the matter of knowledge, or needful working accommodation, the bold move is almost certain to result in a luxuriant crop of worry and disappointment. In such a case cultural information—even seasonable notes out of season—carefully studied beforehand, would, no doubt, have proved of great value. Venturesome growers and new beginners are the ones most in need of timely hints.

Then again, too much weight is sometimes placed on immaterial details in cultural information, and far too much valuable time and labor are often wasted by the inexperienced in trying to be exactly right in these particulars. Only prolonged practice enables the cultivator to distinguish between essential points and those of minor importance and also sets him right as to how far rules, as laid down in such information, hold good and should be observed when the greatly differing climatic conditions prevailing in this wide country—latitude and longitude—are to be reckoned with. Experience is still the best teacher, and of incalculable value.

THE TRADE ONLY—When Writing Please Mention
THE FLORISTS' EXCHANGE.

able value as an aid in understanding the teachings of others.

School Keeps Right Along.

Conscientious writers of cultural notes never go so far in their attempts to instruct as to deal with subjects that they know little or nothing about from actual experience, and frankly admit that they do not know everything worth knowing. Neither do their readers know it all. We are all compelled to rehearse old and to study new lessons every day, all liable to overlook, to forget, to err.

This admitted, it becomes clear that to be continuously reminded of what to do, to be told again and again of how to do it, cannot help but be of benefit to all who earnestly strive to creditably acquit themselves of their daily work, of which, as we have seen, there is no lack. At this season, in particular, there is no difficulty in laying out a week's work. Enough to do that brooks no delay may be pointed out to keep every able-bodied florist and gardener pretty active from Monday morning until Saturday night, with a few busy Sabbath hours generously thrown in for good measure, as for instance:

In the Houses.

Though it is late and all should by this time be snug and trim against the arrival of severe Winter, much, as is the case every Fall, must yet be done on many places to finish up in the erection of new and the repairing of old structures. Autumn weather for such work is ideal, but can never be relied upon to hold on long enough to justify delay in an effort to first get through with what might seem more pressing work. The heating apparatus by now must have sufficiently well shown whether or not it is as near perfect in its operation as such things can possibly be made. If it has shown defects that admit of being corrected, this work should be attended to before anything else. Never, for goodness' sake, go into the Winter with a crippled boiler.

All houses are pretty well filled now, with little room to spare for things that could well stay out of doors or in the frames yet a while longer. But more room is in sight, to be obtained by the rapid clearing out of chrysanthemums as their season is nearing its close, room already spoken for, however, and badly needed for the proper spacing of stock intended for the holiday trade, such as azaleas, lilies, cyclamens, poinsettias, ferns and decorative plants of various species. Some of these, besides plenty of room, now need feeding, all of them, especially Gloire de Lorraine begonias, an occasional turning to the light. Liquid food, applied often in mild form, will have a more gratifying effect than when being administered in heavy doses at great intervals. In an effort to call forth fine coloring in the foliage of dracenas, pandanus, crotons and similar variegated plants, plenty of direct light at this season and pure, buoyant air for at least five hours on sunny days will be found to be more potent agencies than lack of root room and high temperature.

Roses, carnations, sweet peas, snapdragons, also many plants not raised for cutting of blooms, need staking, tying or stringing, the first two mulching and regular fumigation. Dead, dying or diseased plants and foliage anywhere must be removed; some plants want a good sponging and some larger pots. The timely transplanting of young stock is a matter of importance; so is pinching back at the proper stage in its growth, where this is an item in their culture. Geraniums, cyclamens, small seedlings and cuttings of all kinds, if, of necessity, deprived of sufficient room at present, must at least have sufficient air and light. Anything yet in trays, to be potted up later, or such things as myosotis, early narcissi, small ferns, freesias and the like, planted in boxes, as also echeverias, alternantheras, etc., to be carried through the Winter in like manner, should be placed on shelves, if these are available, or can be put up temporarily where they in no way will interfere with the work to be done underneath them. Many of the old stock plants, brought in from the open and to be started into new growth later on, can find room under benches and should now have water but sparingly.

Walks should never be obstructed by stock placed on or near their edges. Resting or dormant plants need but little in the way of light, heat or moisture, and many of these kinds find fairly good quarters under staging or benches at

HENRY A. DREER, 714 Chestnut Street, PHILADELPHIA, PA.

present, while such a place is unfit for anything now in full growth and in need of being attended to regularly.

Clumps of canna roots, dug up and brought in with all the old soil adhering, hardly ever fail to Winter well if placed under the coolest bench of a carnation house and guarded against excessive drip. In that way, no boards under them are needed and the bare ground is to be preferred. Dahlia roots, dug up and allowed to dry before being stored for Winter, keep best if packed in dry, sifted soil and stood in some cool corner of the packing or potting shed; shallow store boxes, having room for one or at most two tiers of the clusters, are best for the purpose, especially if of uniform size to admit of being stood one on the other. Dahlias and cannas, touched merely by one or two light frosts before being dug up and put away for Winter, will always be found to be in better condition when wanted in the Spring than those roots whose top-growth was suffered to be entirely cut down by frost.

It is time to prepare benches, sand and soil for the rooting of cuttings and the starting of seeds in quantity. Many kinds of stock could to advantage be propagated now, slow growing pot plants of varying species now being studded with good material for the purpose, and a fresh crop of seeds coming in daily. A great part of the work awaiting all providers of future stock later on might thus be had over with before the great start is actually made.

All hothouse and greenhouse plants can stand a greater amount of fresh air and direct sunshine under glass in the Fall than in early Spring, particularly those having been kept out of doors during the Summer and to be grown on under artificial heat, roses, carnations, bulbous stock and cut flower plantations, now under forcing, not excepted. Then again, it is much easier in the midst of Winter to maintain the right degree of temperature as required day and night, than just now. Where many kinds of stock, each kind differing from the other in point of treatment, must be grown together under one roof, trouble is rife. Much of the difficulty experienced in the management of stock under glass at this time of year comes from an excess of clammy moisture in the atmosphere, lack of light, un-

tidiness, the opening and closing of ventilators at too late an hour on bright days, a blazing fire in the boiler at sunrise and a dead one late in the afternoon.

In Garden and Field.

Among the most urgent of outdoor work now is the removal of half hardy plants in pots to safe quarters, plants such as ericas, acacias, hydrangeas, azaleas and others, benefited by a few light freezings and a free exposure to the cool and dry air of Autumn, but seriously harmed if caught by hard frosts. Cinerarias, calceolarias, stevias and marguerites, if not already housed, must have given their grower a good deal of trouble in keeping them from being nipped by frost. They should be in the house now and require but little heat to feel well and safe there.

There are things harder than the foregoing that should remain out of doors as long as it is possible to keep them from being damaged by too severe an attack of Winter. To this class belong vincas, snapdragons, carnations, stocks, English ivies, wallflowers, roses of the tender sorts, and all odds and ends usually grown by the great majority of retail florists who largely handle potted plants.

All roses intended for forcing must now be potted up. Campanulas and other hardy plants, if wanted for the production of cut flowers under glass, should also now be benched or potted up. Small plants of hardy species to be sold out of pots in the Spring for planting out, will do well enough in frames all Winter, with protection against the cracking of pots; but this protection will not be needed for some weeks yet. Pansies and daisies in frames are to be dealt with in like manner. Lilies in frames and bulbous stock, boxed and buried for Winter forcing, must be brought in if the blooms are wanted early, but must first be given time for the formation of abundant root supply—the surest guarantee for success in forcing.

The planting of hardy deciduous trees and shrubs can safely be undertaken from now on until too heavy frosts or deep snow put an end to all outdoor labors. Steps toward being ready for a timely sowing of grass seed in early Spring should also now be taken in the matter

CYCLAMEN

Splendens Giganteum Hybrids

Winter Protection for Half Hardy Plants.

Editor Florists' Exchange.

I notice what D. M. says (page 556) in regard to Winter protection. There is one practice that I have adopted with some things that worked well in a comparatively mild climate, and, I think, would do well in the Middle States. With tea roses, place a mound of dry sawdust around them, well up the stems. It will not matter to these plants that the tops will be killed back to the mound, for they will grow and bloom all the better for the cutting back.

In Raleigh, N. C., there is an old *Erythrina cristagalli* that has been cut down every Fall, and a mound of sawdust placed over the stump. The way that plant grows and blooms would be a revelation to many. In Washington, D. C., there has long been a plant of this *erythrina* in a cold frame adjoining one of the propagating houses, that being cut down in the Fall comes out all right in the Spring.

In North Carolina I grew *Plumbago capensis* in the same way, and one Winter the plant being in a sheltered place, the cover was forgotten, but it came up all right in the Spring and bloomed finely. *Achania malvaviscus* grows there, too, as a hardy herbaceous perennial, and makes a large bush during the Summer with an abundance of its bright scarlet flowers. I believe that as far north, at least, as Philadelphia, the sawdust mound would be found a very effective protection to the teas and hybrid teas in Winter, and I hope that Mr. Meehan will test it. The mound should be made broad enough at the base to form a protection against hard freezing in the roots.

Several years ago at the Agricultural college in Raleigh the wife of a new professor from the North carefully wrapped up her tea roses, to the amusement of all who were accustomed to see these with green leaves all Winter. In the Spring her coddled plants were rotten and dead to the ground, while all along the front of the college building she could have seen the great bushes ten feet through that wintered under natural conditions. She has not coddled her roses since.

In the same locality, I placed a thick cover of cotton seed hulls around the rose geraniums, and they

came up all right in the Spring. I tried the same protection with a bed of scarlet geraniums; some of them sprouted weakly in the Spring, but were soon surpassed by the young plants from the greenhouse.

I think, that in the Middle States, the sawdust mound would carry the *Erythrina cristagalli* through the Winter better than lifting it. Figs branched at the ground and bent down and covered with earth, something after the manner of a star with four rays, will winter easily, for I have carried them through in this way in a locality where the mercury fell regularly below zero every Winter, in the hills of Northern Maryland. In North Carolina the branches rotted with the earth cover and came through all right with pine boughs placed around them.

Hydrangeas I formerly grew largely in Northern Maryland, where it is colder than in Philadelphia. My plan there with *H. Hortensia* was to thin out in the late Fall the stunted wood and then bend down to the earth the branches that were to flower the next season. I then cut sods, as for sodding in long rolls, and sodded them all over so that they looked like green mounds all Winter, the plants being along the north side of the mansion, where the sawdust cover would have been unsightly. These old plants always came through and bloomed finely, blue flowers, though cuttings from the same plants grown in pots always gave pink flowers. The blue color of the *Hydrangea Hortensia* in the open ground has always been a puzzle to me. The sod mound is not unsightly and I hope Mr. Meehan will try this, too. I hope, also, to hear from him as to the hardiness, and evergreen character of a privet I sent him some years ago, which was perfectly evergreen in North Carolina, and the name of which has been something of a bother.

I had a plant of Teas' weeping mulberry in North Carolina, grafted seven feet high on alba. The plant makes a perfect arbor with limbs drooping to the ground. I never saw but one fruiting tree of the so-called paper mulberry, *Broussonetia papyrifera*; it was in South Carolina, and was full of its black fruits. Nearly all the plants of this in this country are male or staminate ones.

Some succulent plants are far more hardy than supposed, if they are kept dry. Some years ago at the State Fair in Raleigh, N. C., an exhibitor had a large plant of *Agave americana*. When the fair was over he said that he would give me the plant, and I accepted the gift; but other matters attracted my attention and the plant was forgotten. It remained there in a shed at the fair grounds all Winter, without a drop of water, and when I thought of it in the Spring, I expected to find a dead plant; but to my surprise, it was all right and made a fine show on my lawn all Summer. Being too large and cumbersome to lift, I tried the sawdust mound on it in Winter, but the water got into the heart and it was killed. Kept perfectly dry, this plant will endure a great deal of cold, but frozen with water on the outside, it is easily killed.

For crape myrtles and pomegranates the sawdust mound is worth trying in Philadelphia.

Salisbury, Md.

W. F. MASSEY.

Our London Letter.

BY A. HEMSLEY.

CHRYSANTHEMUMS.—We are getting more new varieties; among the best I have seen are H. J. Jones's '08. This is a very large incurved Japanese of a deep golden yellow, and it has had certificates from the National Chrysanthemum and the Royal Horticultural societies. It is one of Mr. Jones's own raising; he has also some other fine seedling varieties.

Messrs. Wells & Company are also to the front again. They gained a first-class certificate from the National Chrysanthemum Society for Mons. L. Thorn, a fine incurved Japanese of a clear pale yellow. They also submitted several others which though good things, failed to gain distinction. Mrs. A. T. Miller is one of the finest whites we have; the flowers are of immense size and the broad florets, which are slightly curled, are of great substance, and it is one which I have seen good under various conditions. But it is not quite new.

We sometimes hear that the very large blooms are going out of fashion, yet I find there are many who admire them especially when arranged in large vases. Some growers who cannot grow a sufficient number of blooms to fill the large vases, want to keep to the old-fashioned boards; but even when only single blooms are shown they look better in vases than the formal arrangements on boards. One local society set the example last year by specifying that no boards were to be used, and a very pretty show resulted.

LILLUM LONGIFLOREM has been well supplied in fairly dwarf, clean stock, but prices have been no better for these than for the cut flowers, which remain below the average of previous years.

CHRYSANTHEMUM SOCIETY OF AMERICA

Annual Meeting and Exhibition Held in New York, November 6, 1907

Officers for 1908: President, A. J. Loveless, Lenox, Mass., re-elected; Vice President, August Poehlmann, Chicago; Secretary, Davis Fraser, Pittsburgh, Pa., re-elected; Treasurer, John N. May, Summit, N. J., re-elected.

Next Place of Meeting to Be Selected by Executive Committee

The annual meeting of the Chrysanthemum Society of America was held on Wednesday afternoon, November 6, in the Mechanics and Traders' Hall, West Forty-fourth street, New York. President A. J. Loveless in the chair. The president of the American Institute, Robert Ritter, welcomed the visiting members, and apologized on behalf of the institute he represented for the limited quarters they had been able to furnish for the Chrysanthemum Society to hold its exhibition. The secretary, David Fraser, was unable to be present, and Arthur Herrington acted as secretary pro tem. President Loveless read his address, which was, in part, as follows:

Mr. Loveless referred to the progress making in the society, but urged greater responsibility on the part of individuals in the way of securing additional members. Continuing he said: "I do not believe the best interests of the society can be served by merely holding an annual exhibition in the Autumn, as it has a tendency to localize the work in the immediate vicinity where the exhibition happens to be held. A national society should have broader lines, and reach out so as to embrace every town in this country, where an exhibition of chrysanthemums is held, but this phase of the work can only be undertaken when the society has a regular standard membership to insure sufficient funds to cover any expenses incurred. To this end I would suggest that the various horticultural societies throughout the country be invited to join the Chrysanthemum Society of America as auxiliaries, paying the national society an amount to be determined by the membership of each individual society, pro rata. By this means every horticultural society in the country can become a part of the national society, and be enabled to compete for its special premiums, within its own jurisdiction."

After complimenting the committees of the C. S. A., and the splendid service they rendered chrysanthemum growers in helping to eliminate inferior varieties, President Loveless said: "It is true that some varieties do not turn out as well as one might expect, but this fact is unavoidable and cannot be foreseen, and while we get some marvelous flowers from varieties originating in England, France and Australia I feel sure the United States is capable of producing something even more phenomenal in size, and with a constitution suited to our climatic conditions, and while the whole world looks to us for the latest developments, let us be equal to the occasion, and by careful and systematic hybridization produce varieties which will be sought after the world over for their excellence."

"We must work out our own problems in matters of cultivation, for no cultural methods successfully practiced in foreign countries can be adopted and carried out here with any degree of success, our climatic conditions being entirely different, this also being true of different sections of our own country."

"A new era seems to have commenced by the introduction of the large flowered, early varieties; these, I feel sure, will be very welcome, as in some localities the season for chrysanthemums is all too short, and as we are fairly well supplied with late varieties, excepting perhaps a red sort that would come in for Christmas, the improvement seems to be in the right direction. The single varieties are also becoming more popular year by year and as these are improved in quality and color, the general public will accept them as desirable plants for the home, and also for decorative purposes."

"These are being grown more generally than is supposed, almost every house of chrysanthemums containing a few singles, and as we become acquainted with them our love for this class of blooms increases and we find a little more space devoted to them each year. The improvement of these varieties should be the work of our society, every encouragement being given to exhibits as opportunity offers."

Regarding the annual report the president remarked: "I think it would be of the greatest importance could we arrange to include in its pages the reports of the various exhibitions held throughout the country, classifying the exhibits, naming the winning varieties in every case, and compiling these into a reference list, so that anyone could see at a glance which varieties had been most successful in the exhibitions of the year, making valuable memoranda for the future."

He closed his address by thanking the horticultural press for its courtesy in printing the society's notices, and also for interest in the work of the organization. He hoped in the future a column could be devoted to items of interest to chrysanthemum growers, and be contributed to by members of the society. He also tendered thanks to the various committees and to the American Institute.

The secretary's report was then read by Mr. Herrington. It was evident from this report that great efforts had been made to round up the delinquents, but very little response had resulted, and the society at present numbers but eighty members in good standing.

The treasurer, John N. May, was absent, and his report was necessarily omitted.

William Duckham then read a paper on "The Cultivation of Exhibition Chrysanthemums." Charles H. Totty followed with a paper on "Single Chrysanthemums." Some discussion ensued on the necessity of providing for the exhibits of pompon and single chrysanthemums at the exhibitions, and a committee was appointed to prepare a scale for these types and report at the next meeting. R. Vincent, Jr., said he was glad to see that the kinds of chrysanthemums he was interested in and had been cultivating for so many years had at last been recognized by the society. The committee consisted of C. H. Totty, Elmer D. Smith and W. Duckham.

Officers for the ensuing year were elected as follows: President, A. J. Loveless, re-elected; vice-president, August Poebmann; secretary, D. Fraser, re-elected; treasurer, John N. May, re-elected. The selection of next place of meeting was left to the executive committee.

The suggestion made by the president in his address regarding closer affiliation with other societies was then brought up by Mr. Herrington and, on motion of that gentleman, a committee of three was appointed to devise some plan whereby local horticultural societies could become more interested in the national organization. The president appointed as such committee, W. N. Craig, chairman, A. Herrington and W. Kleinheinz. The meeting then adjourned.

The Awards.

The winners of the C. S. A. prizes were as follows: The society's cup for the best 10 blooms of any variety was captured by T. Proctor with the variety C. Montigny, and the silver cup of the F. R. Pierson Company for the best 10 blooms of yellow, 10 of white and 10 of pink, by H. Turner. The silver cup for the best 12 blooms of Miss Clay Frick went to Wm. Kleinheinz. Vaughan's Seed Store silver cup, for the best bush plant, was won by Peter Duff. W. Wells & Company's gold and silver medals for the best six blooms of Miss Miriam Hankey went to C. H. Totty and W. H. Waite, the former capturing the gold medal and the latter the silver one. The Henry A. Dreer prize, for the best 24 blooms in six varieties, was captured by H. Turner. Stumpp & Walter Company's prize for the best three blooms of Morton F. Plant went to W. Kleinheinz. The J. M. Thorburn & Company's prize for the best 12 blooms in four varieties was won by W. Turner. The A. T. Boddington prize, for the best 10 blooms of Beatrice May, went to J. Downing. The C. H. Totty prize, for the best 12 blooms, 12 varieties, 12 inch stems, was won by Nathan Smith & Son. The Nathan Smith & Son prize, for the best six blooms, seedling or sport of American origin, was awarded to Wm. Kleinheinz with a white variety named Lynwood Hall. For the largest single bloom, white, J. Fraser was the winner with O. V. West; for the largest single bloom, yellow, T. Proctor won out with F. S. Vallis; for the largest single bloom, pink, A. H. Wingett was the winner, with Lady Hopetoun.

Re-elected President C. S. A.

Single-Flowered Chrysanthemums.

Read by Charles H. Totty, Madison, N. J., before the C. S. A. at New York, Wednesday, November 6, 1907.

This type of chrysanthemum is not new in the sense that it is a recent break from any other type, and yet it was until the past two years practically unknown by the majority of flower buyers in America. There are several reasons for this, the principal one perhaps being that the general public had been educated to the large flowers, and would not see their money's worth in the more modest singles, putting them down in their own minds as merely outside hardy flowers.

To-day things are changing, and the single varieties are becoming recognized at their true worth. I will confess that it was the working of the old law of supply and demand that caused me to turn to the single varieties. Americans traveling in Europe and noting the many beautiful types of singles and the varied uses to which they were put, asked their superintendents why these singles were not grown more in America. As in every walk of business life the demand created the supply, and to-day I can point you to many private establishments where the singles are grown in ever-increasing numbers for conservatory decorations as pot plants, and where they are highly appreciated for cut flower use.

A Call for Singles.

One day last week I spent a few minutes in a high-class retail store. On the counter were two vases of singles, one of Kitty Bourne, a yellow, and the other Ladysmith, a light pink. During those few minutes I noticed that two sales were made of these varieties, and though it may be only a straw, does not the old proverb say that "straws show how the wind blows?"

Use as Pot Plants.

Aside, however, from the financial end of the question, the singles make beautiful pot plants. They are easy to grow, and there are few homes whose occupants cannot enjoy them if they care anything at all for flowers.

There is no fear that the singles will displace the big fellows, either on the show tables or for large decorations; but both have their places and should be recognized.

C. S. A. Should Assist.

I am not aware that the Chrysanthemum Society of America has ever made provision in its classification, or scale of points, for the single-flowered types, but I submit the matter to the executive board for its consideration at some future date. The American hybridizer is busy raising new singles and if the C. S. A. will give him encouragement and an ideal to attain to, I think we could soon see wonderful improvement over present types. I do not happen to know the scale of points of the British society, but for the sake of uniformity it might be well, perhaps, in case this society takes up the matter to find out and see how that scale would apply to our own case.

A Good Type Described.

A good type of single, to my mind, should be, first, dwarf in habit. The weedy, loose-growing forms are not so well adapted for pot plants, nor do they make the showing as a cut flower that the dwarfer, closer

type does. The flower should be almost flat when opened; if the petals droop too much it destroys the shape of the flower, which should be circular. Also the flower should not have too many rows of petals. A semi-double flower cannot be called a single in any sense of the word. If we add to these qualifications a flower of good clean color, the result is a thing of beauty, which if not a joy forever is at least a source of great satisfaction to the grower and a boon to the gardener who has to produce a good deal of stock from a limited space.

Cultural Requirements.

Culturally, the singles present no problems to master. There is no question of crown or terminal buds, since the plants are allowed to develop naturally and, of course, give flowers only from terminals. I find it pays to disbud slightly, as the flowers then come much finer, and the plants respond to generous feeding as readily as do the big fellows. A selection of good varieties would run about as follows: White—Miss Irene Cragg, Nancy Perkins, Gertrude, Miss T. C. Warden and Merstham White. Pink—Ladysmith, Mrs. E. Roberts, Gracie Lambert, F. W. Smith, Reine des Roses, Katie Covell and Marvel. Yellow—Kitty Bourne, Lily Beer, Golden Star, Miss A. Holden, Pretoria and Kathleen Bunyard. Odd Colors—Mary Richardson, a salmon red, one of the finest we have; Crown Jewel, a fine bronzy yellow; Belle of Weybridge, chestnut; Felix, chestnut; Linton, a large-flowered deep blush; Rev. W. E. Rewfrey, a crimson maroon; Ethel Beer, a bright terra cotta. The list of varieties runs into the hundreds, and all have some merit, though many are almost identical in color and one naturally looks for the cream only.

In conclusion, gentlemen, permit me to say that few plants will give better returns for the amount of time and trouble involved in their culture than the once despised single chrysanthemum.

AMONG THE GROWERS

Lager & Hurrell, Summit, N. J.

A visitor to the establishment of Lager & Hurrell, the well-known orchid growers, at Summit, N. J., would just now see the preparations making for the flowering of orchids on a commercial scale, for the approaching holiday season; and would be able to get some idea as to the most economical methods of growing orchids for the cut flower trade.

The establishment lies in a hollow, made from the high ground, and consists of five houses, one 200 feet long, three 150 feet long, and one 100 feet long, all heated by a hot water system.

With the exception of one of the 150 foot houses, the structures contain a mixture of different species of orchids. The plants are thus disposed because each house has been found to possess a different atmosphere, and a longer blooming season for some of the varieties is in this way obtained. For instance, if a whole stock of plants of *Cattleya labiata* were benched together they would all come in bloom at one time; but distributed through the different houses the blooming period is extended, because they don't all flower at once. Just why the difference in atmosphere exists is inexplicable, but the experience of several years has demonstrated that there is a difference, and it is quite to the advantage of the grower. The longer the blooming season of any particular variety, the less chance of glut in the market, and the higher the prices. With a few of a kind here and there, growing under slightly different conditions, it is possible to retard or force the flowering to conform to the required output.

In the cattleya house the most economical method of growing for bloom is apparent. The plants are grown on boards, the boards being of a length suitable for convenient handling and arrangement upon rails in such a way as to slope parallel with the roof. Each board has cleats on the sides, but is open at the ends to permit of drainage. The plants are firmly fixed to the boards with coppered staples, and peat for holding moisture is worked in and around the plants. Small pieces of plants, not otherwise of value, can be worked in with the larger clumps. When in position, a solid and continuous bench of plants is presented, with an immense economy in space as compared with that required for plants grown in pots or cribs. The most important thing to observe in boarding the plants is that there be free aeration of the roots. Another advantage offered by the board method is ease in watering, less care being required than when pots are used.

The cattleyas benched are: *C. Dowiana* and *C. labiata*, varieties now in profitable cut; *C. Percivaliana*, which follows, will be nicely in bloom for Christmas; *C. Trianae*, which will flower from December to March; *C. Schroedera*, practically the only cattleya to be relied on for profusion of bloom at Easter; *C. Mossiae* and *C. Meudeli*, also for Spring blooming; and *C. Gaskelliana*, *C. Warneri* and *C. gigas* for Summer flowering. All these cattleyas do well under the treatment mentioned, will grow admirably in any even-span roofed or lean-to house, and are the sorts best suited for a commercial grower. They may also be grown at the end of a house in which carnations or other flowers are cul-

tivated, by shading the portion to be devoted to them. Mr. Hurrell recommends this method to anyone wishing to make a beginning with orchids. Use whitewash evenly until the shading is about the same as that afforded by ground glass, which is sufficient to keep the plants from burning. Let them have plenty of air, but not too much water. They like water, but an excess of moisture is a mistake.

A Fine Piece of *Cattleya Mossiae*
Importers, Lager & Hurrell.

In some of the houses creepers are grown beneath the benches, and the even moisture exuded by them at night, or when the ventilators are closed, is of great benefit to the plants. Above and below the plants in the cattleya house a miscellaneous assortment of orchid plants, classed from the firm's catalogue, may be seen, the arrangement permitting of easy selection.

In another house used for general plant stock a lower bench running the entire length of the house

is used for the accommodation of new arrivals from the tropics. An immense shipment of *Cattleya Mossiae* had just arrived, and was to be seen laid out on this bench for recuperation before being made up. This shipment, the firm states, is the best, in so far as quality is concerned, they have ever received, and includes many specimens of unusually large size. On one of the clumps a hundred and fifty bulbs may be counted, and should produce over a hundred flowers.

Large numbers of cypripediums are grown both for cut flowers and plant sale. Among them, and nicely in flower, are a few plants of *Fairieanum*, the "lost" orchid, the rediscovery of which a short time back evoked such interest in the orchid world, and resulted in the sale of a specimen at a fabulous figure.

Among the few orchids in flower, of interest to commercial florists, were noticed *Dendrobium formosum giganteum*, and *D. Farmeri*; and a new hybrid known as *Laelio-cattleya C. G. Roebling*, a cross between *C. Gaskelliana* and *L. purpurata Anura*, one evidently destined to be added to the list of orchids adapted to florists' use.

P.

John Scott, Flatbush, N. Y.

A recent visit to the establishment of John Scott, Flatbush, N. Y., opened our eyes to the fact that there was such a crop of gardenias being prepared for this market for the coming Winter the like of which has never been seen before in this vicinity. Mr. Scott has several houses devoted to this flower—some are filled with young plants, others with plants from which heavy crops were cut last season, while many hundred plants are grown in pots. It is a well-known fact among professional florists that the gardenia is about as difficult to handle as any commercial plant grown. Mr. Scott seems to have solved the problems that are associated with the cultivation of gardenias, and has become one of the most successful producers in the country of cut flowers of this

L. Longiflorum

Dwarf Hybrid

L. Harrisii

L. Doell

plant during the Winter season. His stock is in excellent shape throughout, and a splendid crop of flowers is an assured fact. He has also several houses filled with the well-known fern, *Nephrolepis Scottii*. This variety, in spite of the many forms of *nephrolepis* that have since been placed on the market, still holds its own as a decorative fern, as a rapid grower, as taking less bench space than any other variety, and as meeting with ready sales for all the stock that can be produced.

The importation of large palms and bay trees is a feature that Mr. Scott has gone into extensively. He has on hand at the present time a very fine collection of *Kentia Belmoreana* and *Forsteriana* in sizes ranging from medium to large. *Araucarias* have also been imported heavily, and many fine specimens are to be seen. *Begonia Gloire de Lorraine* and *Begonia Agatha* are both being grown extensively, and two houses of very fine plants in from 5-inch pots upward, give promise of being particularly desirable stock for the coming holidays.

Lilies in Bermuda.

Editor The Florists' Exchange:

For some years past a considerable amount of damage has been done to the Bermuda lily industry by our growers here carelessly or ignorantly permitting the different varieties to become mixed, causing a tremendous loss to the florist who purchases them. For not only is the first cost on a large percentage of the bulbs quite lost, but the loss of house room, the disappointment of both grower and customer, caused by the non-flowering of bulbs sent over as *Lilium Harrisii*, but which are not, have combined to reduce the value of the industry here in Bermuda by some 80 per cent.

Since I have been here I have given the subject very careful consideration, and I feel sure that the florists of America will welcome the news that their interests are being watched at Bermuda. All know now that *L. Harrisii* is the only bulb that can be forced into flower at any time between November and Easter, that the value of a batch of *Harrisii* depends on the stock being pure; and the certain knowledge that they are pure and unmixed is perhaps as valuable.

Some two or three of our largest growers, I am glad to say, have for the last few years very carefully weeded out during growth the hybrids and longiflorum and can now guarantee their stock absolutely pure *Harrisii*; these, of course, sell privately to the large nurseries. A large number of cases are sold in the open market and the florist who purchases them is entirely in the hands of the packer; for it is very difficult to distinguish between the different bulbs.

In the hope, therefore, that the photographs accompanying this letter may be of some service to the florists of America, I take the liberty of forwarding you a set, and trust that you may be able to publish them in your journal.

No. 1 was taken early in April and shows the several kinds in their various stages of development when *L. Harrisii* is in full flower.

In this picture, 1 is a plant of *L. Harrisii*; 2, a "hybrid," called sometimes "Doell"; 3, 4, and 5 another hybrid of dwarf growth, while 6 and 7 are *L. longiflorum*.

No. 1a shows the mature bulbs of these; the heap ticketed 1, is *L. Harrisii*; 2, "Doell"; 3, the dwarf "hybrid" (3, 4 and 5); and 4, *longiflorum*.

The large figures are two typical bulbs from each heap; No. 1, *L. Harrisii*; No. 2, "Doell"; No. 3, dwarf "hybrid"; No. 4, *L. longiflorum*.

If you consider it desirable I could give a detailed description of each type on some future occasion. [Please do.—Ed. F. E.] T. J. HARRIS.

Bermuda. Superintendent Public Gardens.

WREATHS AND CROSSES OF MOSS.—In the protest of J. J. Buchey & Company against the assessment of duty by the collector of customs at the port of New York, before Board 1, October 22, 1907, the following opinion was rendered by McClelland, G. A.

"Wreaths, crosses, etc., composed of rock moss, dyed and prepared, were held to have been properly classified as unenumerated manufactured articles under section 6, tariff act of 1897."

Reading from top across cut.

Lilium sps. "Hybrid." Dwarf growth, much foliage of dark bluish-green color, late flowering, first flowers May 10, 1907.

Lilium sps. "Hybrid." Tall as *Harrisii*, strong grower, first flowers April 11, 1907.

Lilium longiflorum; very late. First flowers May 13, 1907.

L. Harrisii. True "Easter" lily. First flowers March 30, 1907.

FOR THE RETAILER

For reproduction on this page, we solicit from our readers engaged in the Retail Trade, good, clear photographs of subjects that are of general interest, such as store interiors, designs of different classes, new delivery wagons, etc.

House Decoration for Weddings.

House weddings are a daily occurrence in this and other large cities. It is usually the custom to decorate the house in the case of church weddings, but the affairs are seldom as elaborate as when the ceremony is held in the house itself.

In house decoration a study should always be made of the conditions and proportions. It is naturally the aim of every florist to get as much out of a customer as possible, but any florist who has an eye to future business knows that an overloaded decoration will not only be detrimental to his reputation as an artist, but will eventually hurt his business. Never crowd a decoration because the flowers happen to be inexpensive.

moses are always graceful for mirror decoration.

In decorating mantels vases of flowers will be found more effective than scattering the blooms here and there through the asparagus. Everything trivial should be avoided. Mirror effects should be carefully studied; it is often advisable not to cover a mirror at all, as the reflection from some other part of the room will at times be of more value and call for more favorable comment than if the mirror itself had been treated.

If individual specimens are to be used in a house, whether they be palms or ferns, they should be as nearly perfect as possible, as they are sure to be closely scrutinized. Good material in plants or flowers forms its own best advertisement.

The value of graceful plants of palms and ferns for house decorating cannot be too highly estimated. *Cibotium Schiedei* and *Adiantum Farleyense* are among the most attractive ferns, and too much cannot be said of *Cocos flexuosus* as a palm that fits all places. *Kentias*, of course, are always serviceable, and I may say indispensable. Such palms as the stiffer growing varieties of *Phoenix* should be avoided for house affairs. *Palmettos* are often used instead of palms or in conjunction with them, but for high-class affairs they should be left out. Wild smilax will be found to look much better for filling in and the covering of pots, and is the most effective covering for bare walls and ugly ceilings.

Harrisii Docil Hybrids of Dwarf growth Longiflorum
Lilies in Bermuda; Photo taken in April, showing kinds in their various stages of development when *L. Harrisii* is in flower.

While a certain amount of solidity is required for church decoration, it must be carefully avoided in the home, if good results are to be obtained. It is generally necessary to have a group of palms or a canopy effect at one end of the room where the ceremony is to be performed. I have usually found it more practical, in the event of the room being narrow, to erect the bower or canopy, as the case may be, on one side of the room instead of at the end. Not only can a better effect be thus obtained, but it will be found more convenient for the reception party, which will often be crowded at the end of a narrow room.

In a house decoration where the rooms are almost invariably well filled, all decorative effects should be kept well up; anything below the line of sight would be lost. Of course, ugly places, such as fireplaces, have to be filled in, but a few palms or a large spreading fern will be all that is required. Flowers would be thrown away in such places.

The reception hall and stairway leading to the upper floors should be well taken care of, as it is first seen on entering the house. The balustrade can be covered lightly with wild smilax or asparagus; or at this season Autumn leaves would be appropriate. The newell post should be a handsome feature of the hall. A large cluster of chrysanthemums or other large flower tied with handsome ribbon, or a basket of flowers fastened on the top looks well. The decoration can be continued up the stairs, using the same variety of flower. At the head of the stairway a few nice palms will look well. Mirrors, chandeliers and any part of the hall lending itself to decoration should be taken care of, always bearing in mind not to get it too heavy, and to preserve a color scheme. Strings of Asparagus plu-

The buffet table is usually the thing for house weddings, as there is seldom room to seat all the guests. This should be done in white, although pink may be used. The decoration is generally made high, the centerpiece being raised; or a tall vase is used. In this latter case long-stemmed flowers are employed, a graceful effect being obtained by allowing the flowers and asparagus to hang down almost to the cloth.

D. RAYBUN.

NEW JERSEY FLORICULTURAL SOCIETY.—At the monthly floral display held on the first instant, *cosmos* Lady Lenox, grown in an eight-inch pot, was exhibited by Peter Duff, for Mr. John Crosby Brown, which did full justice to the claims made for this new flower in beauty of color and size. A standard chrysanthemum, *Lady Lydia*, with 123 flowers, from the same source; exhibition blooms of the following varieties of chrysanthemums: *Mme. Maranette*, *Colonel D. Appleton*, *Valerie Greenham*, *Morton F. Plant*, *P. S. Vallis*, *Beatrice May*, *M. L. Rousseau* and *Brighthurst*, from Sydney and Austin Colgate, grown by William Reid; a vase of *Pink Ivory*, from Mr. Charles Hathaway, grown by Max Schneider; a vase of mixed chrysanthemums from Mr. Stewart Dickson, grown by Albert Larsen; *Cypripedium insigne Sanderæ*, grown and exhibited by Edwin Thomas, and fruit from Mr. Stewart Hartshorne, grown by A. T. Caparn, and from Charles Hathaway. John Derwin, gardener for Mr. A. C. Van Gaasbeck, was placed in nomination, and Charles Schweinfurth elected to membership. Final reports were made upon the forthcoming show to be held on the seventh and eighth instant, and the acceptances read from John N. May, Charles H. Atkins and Anthony J. Manda, who are to serve as judges. A letter of sympathy to A. D. Rose, who lies ill with pneumonia, was ordered sent by the secretary. J. B. D.

(68) **Carnations.**—Kindly state when one may expect blossoms from rooted carnation cuttings if set in benches the last of February.

Mass. S. E. B.

—As we understand the question, rooted carnation cuttings will be planted in the benches the last of February and kept growing right through. If we are correct in our interpretation of the inquiry, cutting of the flowers will begin during the latter part of September or early in October, a great deal depending upon how the plants were pinched back and cared for during the Summer.

I send you cuttings of Rose Pink Lawson. Please inform me what causes the disease with which they are affected, also the remedy. The trouble seems to be spreading all over the bench.

F. S. New York.

—The carnations are badly affected with stem rot, also bacteriosis, and if it is at all possible to procure new stock, it would be better to do so, and replace the plants that are attacked. Spraying with Bordeaux mixture would keep the bacteriosis in check, but for the stem rot there is no remedy.

(69) **Palms.**—What is the proper way to mix soil for repotting palms, and cause of spot on leaf of same, sample of which I enclose.

F. S. New York.

—The palm leaf sent is not diseased; the spots there are caused by blistering through imperfections in the glass. Where palms are carried through the Winter under glass that is not free from bad spots, it is a good plan to put a light shading of cheesecloth under the glass to prevent blistering of the leaves. A good soil for palms is one that contains about one-sixth part of perfectly decomposed stable manure, two-sixths leaf mold, with enough sand added to insure quick drainage.

(70) **Wintering Tritoma Pfitzeri and Incarvillea Delavayi.**—Kindly tell me the best way to winter Tritoma Pfitzeri and Incarvillea Delavayi.

H. R. H. New York.

—To keep the roots mentioned through the Winter we would advise storing them away, the same as is done with dahlias, by placing them in some frostproof shed or cellar and covering them over with sand.

(71) **Cloth as a Substitute for Glass on Sash.**—I would like to know if there is a cloth sash used for forcing vegetables, etc. I have heard that it is superior to glass sash and that a grower in Greenwich, Me., used it extensively for greenhouses and frames. Is that correct? If so, is it waterproof, and how is the frost kept out? Would it bring on vegetables as early as glass?

F. H. R. North Carolina.

—In the South cloth has been used quite extensively in the raising of vegetables, but whether it has been found successful to use that material in Maine we are unable to say. We do not believe, however, that it would be wise to risk any large crop of vegetables through the Winter with no covering but cloth, unless it were in a climate where there are never more than two or three degrees of frost. A writer in the Market Gardeners' Journal of October 30 says: "I have always insisted that glass sashes are in the long run cheaper than cloth. The first cost of glass is, of course, greater, but when the almost annual renewal of cloth is taken into consideration, it will be found that in the long run the glass is the cheaper."

(72) **Glazing Greenhouses.**—In glazing a greenhouse would you advise bedding the glass in putty and then running liquid putty along the top, or is there a better method, and if so, what?

A. B. C. New York.

—While some will bed their glass in putty when glazing a new house, we do not believe that it is necessary, nor do we think it is the best way. We would simply lay the glass on the sash

VIOLETS

York, Pa.

Since the York County Fair, October 11, business has brightened up considerably and chrysanthemums are the only flowers wanted now. Roses and carnations, although not very plentiful, have to take a back seat for a while.

The York County Fair surprised everybody, the attendance being far ahead of that of previous years. The floral exhibits were exceptionally good, although room was so scarce the plants, etc., could not be arranged so as to be shown to their best advantage. Messrs. Schaefer, Smith and Plitt were the largest exhibitors. Schaefer's palms certainly were first prize ones, also his mantel decoration, it being a 40-inch shallow box of Adiantum Croweanum; some of the fronds were 22 inches in length. C. Smith had a fine display of bulbs not for competition, and they certainly did him credit. The display of design work was good and right up to date, and pretty keenly contested; the prizes were carried off by Messrs. Smith and Schaefer.

Bulbs, azaleas, etc., are arriving in quantity now, and are being planted as fast as they come in.

Chrysanthemums are in the midst of their glory now, and are selling well, prices ranging anywhere from \$1.50 to \$5 per dozen. Carnations are selling at from 40c. to 75c. per dozen and roses, except for a few fancy or specials, are out of the market altogether.

C. Smith has a fine lot of chrysanthemums, and he certainly knows how to grow them too.

C. Schaefer also has a fine lot; his Robert Halliday, Alice Byron and Pink Ivory are certainly a picture. To supply his fast increasing trade, he has been obliged to purchase material for a new house, 150x30 feet, to be put up this Fall, and he intends erecting one, but more probably two more next Summer.

Outdoor planting of bulbs, etc., is in full swing, and there seems to be an unusually large demand for them this year.

Business is good; the weather is cold and wet, people are nearly all home from the country, and so from now on—the rush. Florists like it.

RUBBER.

DANBURY, CONN.—T. H. Judd recently planted 6,000 carnation plants in his new greenhouse.

OUR FUNNY LANGUAGE.

Some seeds you sow,
You say they're sown;
The bed you hoe,
But it's not hoed;
Yet stuff you grow
Is always grown.

When plants you feed,
Those plants are fed;
But ground you weed
Is never wed;
And flowers that seed
Are never sed.

When bulbs you buy,
You're sure they're bought;
But if they die
They are not dough.
You ask me why?
I answer wought.

The weather's wet,
It might be wetter;
Yet if you fret
'Twon't make things fretter.
The fruit that's set,
It can't get setter.

Things we forget
Are then forgotten;
But borders set
Are never sotten.
A garden let
Is never lotten
Therefore you bet
Our language's rotten.

—Peter Penn, in Gardening World, London.

WASHINGTON, D. C.—Fire, which nearly destroyed the five-story brick building at 321-323 C Street, southwest, occupied by the Seed Distribution Division of the Department of Agriculture, caused damage amounting to \$75,000 early on Wednesday, November 6, 1907. The loss, which is nearly covered by insurance, included damage to building, machinery, equipment, and destruction of seeds, which will delay for several weeks the distribution of flower and vegetable seed through government sources.

THE EXHIBITIONS

Chicago.

[By special Wire, Wednesday, November 6, 1907.]

Chicago's "Great Flower Show," the third annual exhibition which the Horticultural Society has held in the Coliseum Building, and which opened to the public at noon to-day for a week's duration, is all that was anticipated by its most enthusiastic supporters, and unbounded credit is due Manager George Asmus and the executive committee—J. C. Vaughan, P. J. Hauswirth, J. B. Deamud, Leonard Kill, E. A. Kanst, George Asmus, August Poehlmann and R. H. Warder—and the members of the twenty other active committees, composed jointly of members of the Horticultural Society of Chicago and the Chicago Florists' Club, all of whom have worked courageously for weeks to bring about this glorious result, as well as to the extensive list of exhibitors from far and near who have contributed their choicest products in large or small quantities to perfect this grand consummation.

The attractions which make the present show of especial interest are both numerous and unique, and in general effect it does not seem probable that its equal has ever before been presented or even contemplated. The floor space, which with the main hall and the annex aggregates about an acre and a half, is fully occupied, and the large amount of sodding on which the exhibits are placed in the main hall has certainly produced a revelation in American flower show arrangement, adding a charm to the effectiveness of the exhibits and reducing to a minimum the dust which is not only offensive but injurious to the floral exhibits, especially affecting their keeping qualities.

The general scheme in the floor plan and arrangements is in the main in accordance with the sketch prepared by H. J. Stockman, whose carefully executed designs were accepted by the committee with some slight alterations. The basic idea of the plan was to produce a Summer park effect in the main hall, and a semblance to Winter in the annex, where the nursery exhibits are installed.

From the entrance to the hall on the east side, where the shorter exhibits have been placed, to the west side, where the retail florists' booths and the tall park contributions are located, and toward either end, is presented a most pleasing and impressive view of the show as a whole, though, as usual, the scene from the balconies, where the entire exhibition may be viewed at once and from an elevation, is probably the most fascinating.

The walks or aisles, eight to ten feet in width, are laid out so as to form many vari-shaped sodded beds in conformity with the modern custom of arranging a flower garden all idea or suggestion of symmetry as to shape being avoided, the result being very satisfactory.

The advance entries were considerably larger this year than last, and the exhibitors from outside of Chicago are much more numerous than ever before.

A notable feature is the increased interest and improved exhibits of the private gardeners, a department which if duly encouraged will doubtless add appreciably to future shows.

The annex is completely devoted to exhibits of nursery stock, forming an interesting department with the Winter appearance of the trees and shrubs in marked comparison to the flowers and tropical foliage of the exhibition hall.

The decorations are not on nearly as elaborate a scale as in previous years, yet are sufficiently extensive to fulfill requirements with a great saving in expenditures.

The retail flower booths though greatly reduced in numbers are quite as attractive as ever, and it is noticeable that trade exhibits, or exhibits tending very strongly in that direction, are much more numerous. A full account of these will be given next week.

First Day.—Wednesday, November 6.

The opening day was specially devoted to chrysanthemums, miscellaneous plants and private gardeners' exhibits. The cut chrysanthemums were about on a par with those of previous years, but the plants were generally better than heretofore, while the miscellaneous plants and private gardeners' exhibits, especially the latter, were superior to previous exhibitions. The weather for the opening day was perfect and the attendance unusually large for the first night. The awards were as follows:

Cut Flowers—Chrysanthemums.

Fifty white—First, D. C. Noble, Columbia City, Ind., with Mrs. Henry Robinson; second, Poehlmann Brothers Company, Chicago, with Timothy Eaton; third, Wietor Brothers, Chicago, with same variety.

Fifty pink—First, H. W. Buckbee, Rockford, Ill., with A. J. Balfour; second, E. G. Hill Company, Richmond, Ind., with Emil David; third, Poehlmann Brothers Company, with Dr. Enguehard. Fifty yellow—First, Poehlmann Brothers Company; second, D. C. Noble; third, H. W. Buckbee, all with Colonel D. Appleton.

Fifty any other color—First, Poehlmann Brothers Company, with John Shrimpton; second, Wietor Brothers, with Intensity; third, Gunnar Tielmann, Marion, Ind., with Julian Vuillemer.

Twelve white—First Nathan Smith & Son, Adrian, Mich., with Beatrice May; second, H. W. Buckbee, with Alice Byron; third, Poehlmann Brothers Company, with Timothy Eaton.

Twelve yellow, not darker than Major Bonaffon—First, Nathan Smith & Son, with Crocus; second, Poehlmann Brothers Company, with Timothy Eaton; third, John A. Salzer Seed Company, La Crosse, Wis., also with Timothy Eaton.

Twelve yellow, darker than Major Bonaffon—First, Poehlmann Brothers Company, with Colonel D. Appleton; second, H. W. Buckbee, with Mrs. William Duckham; third, Mr. E. M. Barton (Charles Reardon, gardener), Hinsdale, Ill., with Colonel D. Appleton.

Twelve pink, lighter than Viviani-Morel—First, H. W. Buckbee, with William T. Robertson; second, Poehlmann Brothers Company, with Dr. Enguehard; third, Wietor Brothers.

Twelve pink, not lighter than Viviani-Morel—First, H. W. Buckbee, with Dr. Enguehard; second, D. C. Noble, with Viviani-Morel; third, Nathan Smith & Son, with A. J. Balfour.

Twelve red—First, John A. Salzer Seed Company, with Intensity; second, Poehlmann Brothers Company, with John Shrimpton; third, E. M. Barton, with Intensity.

Twelve bronze—First, Buckbee, with Mary Ann Pickett; second, E. G. Hill Company, with Dubrussion Foubert.

Twelve any other color—First, Hill Company, with M. Loiseau Rousseau; second, Buckbee, with Charles Longley; third, Barton, with Harrison Dick.

Collection named varieties, one bloom each, 25 varieties—First, H. W. Buckbee; second, E. G. Hill Company.

Collection named varieties, one bloom each, 25 varieties, on mossed boards—First, Buckbee; second, Hill Company.

Display of pompons, 15 varieties—First, E. G. Hill Company; second, Nathan Smith & Son.

Specimen plant, any color—First, Vaughan's Seed Store, with May Foster; second, J. J. Mitchell (A. J. Smith, gardener), Lake Geneva, with O. P. Bassett.

Specimen plant, white—First, H. W. Buckbee, with Mrs. Buckbee; second, J. J. Mitchell, with Mutual Friend; third, Vaughan's Seed Store, with Clementine Touse.

Specimen plant, yellow—First, Vaughan's Seed Store, with Golden age; second, J. Riordon, with same variety; third, Buckbee, with Cheltoni.

Specimen plant, pink—First, Vaughan's Seed Store, with A. J. Balfour; second, Buckbee, with William Duckham; third, Mr. A. S. Trude (Robert Mueller, gardener) with Dr. Enguehard.

Specimen plant, single—First, Vaughan's Seed Store, with Sweetness; second, A. S. Trude, with Miss Glendolin Mitchell.

Specimen plant, anemone—First, Vaughan's Seed Store, with Garza; second, A. S. Trude, same variety.

Standard, any color—First, Vaughan's Seed Store, with Clementine Touse; second, A. S. Trude, with Dr. Enguehard; third, J. Riordon, with Golden Age.

Five standards—First, Vaughan's Seed Store; second, A. S. Trude.

Five specimen plants—First, Vaughan's Seed Store; second, Buckbee; third, J. J. Mitchell.

Five specimen plants, single varieties—First, Vaughan's Seed Store; second, A. S. Trude.

Five specimen plants, pompon varieties—First, Vaughan's Seed Store; second, A. S. Trude.

Twelve plants, grown to single stem, yellow—First, Vaughan's Seed Store; second, Buckbee.

Twelve plants, grown to single stem, white—First, Vaughan's Seed Store; second, Buckbee.

Group of chrysanthemum plants arranged for effect—First, Vaughan's Seed

Store; second, F. Oeschlin; third, J. Riordon.

Grafted specimen plant—Vaughan's Seed Store.

Collection of orchids—Edward G. Uihlein.

Ten palms—First, George Witthold Company, Chicago; second, E. G. Uihlein.

Best palm—First, Vaughan's Seed Store; second, George Witthold Company.

Ten araucarias—Vaughan's Seed Store.

Ten Begonia Gloire de Lorraine—First, J. A. Peterson, Cincinnati; second, Vaughan's Seed Store.

Six Boston ferns or sports of same—First, J. J. Mitchell; second, F. Oeschlin.

Six Cibotium Schiedei—Vaughan's Seed Store.

The report will be continued next week.

American Institute and C. S. A.
New York.

The exhibition of chrysanthemums, held under the joint auspices of the American Institute and the Chrysanthemum Society of America, opened on Wednesday evening, November 6, 1907, in the rooms of the American Institute, and while the limited space at command necessarily crowded the exhibits, the show as a whole was a very creditable one, many good things being seen in the way of well-grown flowers and plants. The national society's exhibits were, of course, the center of attraction and competition for many of the exhibitors. Competition was close in most of the classes, but the work of the judges was satisfactory to all.

In the classes in which prizes were offered by the American Institute, Peter Duff was the winner in each class for a specimen plant, white, yellow, and pink. These plants were all beautifully grown and reflected much credit to the cultivator. For six plants grown to single stems, J. Bell was the winner, with Colonel D. Appleton, all of which were magnificent blooms considering that the plants were in but six-inch pots. For the best 12 bush plants, J. McNichol was first, and for the best 12 plants in variety, the same exhibitor was again first; J. Downing, second.

In the cut flower classes, George Hale captured the first prize for six white blooms, with Merza; Wm. Turner taking second and J. Fraser, third. Wm. Turner was awarded first for six pink, with Wm. Duckham; J. Fraser, second. For six yellow—Mr. Turner was again first, with Cheltoni, Thos. Head taking second. For six crimson, Wm. Turner was the winner, with W. R. Church; I. Fraser, second. For six bronze, Wm. Turner again was first, with Ethel Fitzroy; George Hale, second. For six incurved white, C. H. Totty was first, with Merza; A. H. Wingett, second. Six incurved yellow, Mr. Totty was again the winner. For six incurved pink, George Hale was first, with Wm. Duckham; Thomas Head, second. Six Japanese bronze, W. Smith captured first, with Glen View; Nathan Smith & Son, second. Six white, George Hale won out with White Carnot; C. H. Totty, second. Six Japanese yellow, George Hale was first, with Mrs. Thirkell; A. H. Wingett, second. Six pink, Thomas Head took first, with an unnamed variety; George Hale, second. Six crimson, George Hale, first, with Mrs. Partridge; Nathan Smith & Son, second. Six bronze reflexed, Thomas Head, first; George Hale, second. Six anemone flowered, yellow, J. McNichol, first; George Hale, second. Six anemone flowered pink, C. H. Totty, first; George Hale, second.

Ten white, Wm. Turner, first, with Nellie Pickett; Nathan Smith & Son, second. Ten pink, Wm. Turner, first, with Wm. Duckham; H. Turner, second. Ten yellow, Wm. Turner, first, with Colonel D. Appleton; J. Fraser, second; C. H. Totty, third. Ten crimson, J. McNichol, first, with H. Partridge; C. H. Totty, second. Ten bronze, C. H. Totty, first, with O. H. Broomhead. Ten blooms, any variety, artificial supports allowed, T. Proctor, first; C. H. Totty, second.

For the best six undisseminated variety, C. H. Totty was first with W. Moir. Twenty-five white, T. Proctor, first, with Merza. Thirty varieties on short stems, C. H. Totty, first, with a beautiful collection. Twenty varieties on short stems, W. Turner, first; J. McNichol, second. Ten varieties on short stems, J. McNichol, first; A. H. Wingett, second. Twelve varieties on short stems, Nathan Smith & Son were the winners.

In addition to the foregoing there was a very comprehensive exhibit of pompon chrysanthemums from R. Vincent, Jr. & Sons Company, White Marsh, Md., including over 100 kinds; also an extensive exhibit of the same type of blooms from Thos. Meehan & Sons, Germantown, Pa. R. Vincent, Jr. & Sons Company were awarded the first prize; Thos. Meehan & Sons, second.

Chas. H. Totty exhibited two seedling chrysanthemums which he had just purchased in Philadelphia, one white, the other pink, seemingly very desirable varieties for commercial purposes, they being of that incurved solid type which admits of their being shipped to any distance without injury.

John Cook, Baltimore, showed a vase each of two unnamed roses, one a beautiful pink approaching Killarney in color; the other a pure white. H. Turner had on exhibition a plant of the new celosia, Pride of Castle Gould.

Taking it altogether, the exhibition was a grand success so far as the quality of the material shown was concerned, and it seems too bad that we have not available in this city a larger hall for the holding of national flower shows.

The judges, were W. N. Craig, Robert Cameron and Eugene Dailledouze.

Monmouth County (N. J.) Horticultural
Society.

The tenth annual exhibition of this society took place at the Frick Lyceum, Red Bank, N. J., October 30 and 31. It was the best show the society ever held, and large as the Lyceum is, there was no more room than was required. The special palms and ferns, also vases of 25 chrysanthemum blooms for effect were placed on the stage; these exhibits, with forest scenery as a background, and red, white and blue electric lights, made the display exquisite. The exhibition was very well attended and was a great success.

There were four groups of chrysanthemums in not more than 6-inch pots, each group occupying 75 square feet, in which A. Bauer, gardener for Mr. Daniel O'Day, Elberon, got first prize; N. Butterbach, superintendent for Hon. C. N. Bliss, second, and H. A. Kettel, superintendent for the James Loeb Estate, third. W. W. Kennedy received a first-class certificate for a group of anemone seedlings; some of these were certificated last year, and purchased by Charles H. Totty, Madison, N. J.

For groups of foliage plants, H. A. Kettel was first, N. Butterbach, second. Three bush plants, three varieties—W. Dowlen, gardener for Mr. Archaelis, first; James Kennedy, gardener for Mrs. Young, Elberon, second. Specimen palms, H. A. Kettel, first; Dowlen, second. Foliage plants other than palms—George Hale, superintendent for Mr. E. D. Adams, first; William Turner, superintendent for M. C. D. Borden Estate, second. Six specimen ferns—N. Butterbach, first; Kettel, second.

In the class for 36 blooms, 6 varieties of chrysanthemums, William Turner got first with enormous blooms of Nellie Pickett, Cheltoni, Mrs. H. Partridge, Fitzroy, William Duckham and Dunne; George Hale, second. For 18 blooms, W. Dowlen was awarded first; N. Butterbach, second. For 25 blooms, distinct varieties, William Turner was again first with grand flowers; George Hale, second. For exhibits of six white, yellow, pink, crimson, bronze, and any other color, Mr. Turner received first; Mr. Hale, second. Six blooms, Mme. Carnot, white and yellow, Hale was first; Turner, second. Twenty-five blooms for effect—Hale, first; Butterbach, second. In the class for twelve specimen blooms, 12 varieties, N. Butterbach won out with Lady Leonard, William Duckham, Wm. Duckham, Dunne, Beatrice May, President Loubet, Mrs. E. Hunt, Thirkell, Fitzroy, A. J. Miller, Montigny and Partridge; William Dowlen, second.

In the rose classes for American Beauty, Bride, Bridesmaid, and any other color, N. Butterbach got first; George Hale, second.

For carnations, white, Kettel, first; Turner, second. Pink, M. Tierney, first; Kettel, second. Red, Turner, first; Bauer, second. Crimson, Tierney, first; Turner, second. Any other color, Bauer, first.

H. A. Kettel captured the Hartshorne special prize for the best 25 carnations, any variety, and W. W. Kennedy the special for the best seedling.

The judges were C. H. Totty, Peter Duff, and J. B. Hantyne.

M. Tierney, gardener for Mr. Robert Hartshorne, exhibited a vase of a beautiful scarlet seedling carnation called Mrs. Robert Hartshorne. It is a cross between Mrs. T. W. Lawson and General Maceo. He received the society's certificate.

ARAUCARIAS OUR SPECIALTY

WATCH US GROW

1907 is our 12th anniversary in a successful career in the importation, growing and shipping of this well-known and so much admired evergreen, decorative plant, **Araucaria Excelsa**, **Robusta**, **Compacta** and the **Excelsa Glauca**.

Our importation this spring, 1907, has swollen up to the enormous number of 6,000; more are coming with the azaleas in September and October. The florists in every city from the Atlantic to the Pacific Ocean can talk of Aschmann's **Araucarias**.

Now is the time to buy. They will gain in their growth 100 per cent. in two or three months.

The next in rank is our **Nephrolepis Ferns**, of which we only grow the best selling and well-known varieties, and of which we have seen a big lot: **Boston**, **Elegantissima**, **Whitman** and **Scottii**, three large houses full, in best selling sizes, all pot grown (not bench grown).

Our ferns are not forced or grown in shady houses, but grown exposed to the sun, ventilators are open day and night. Such treatment stiffens the fronds, and makes strong, stout plants, that can be shipped 5,000 miles safely without injury to the plants in transportation.

ARAUCARIA EXCELSA, 5 to 8 1/2 in. pots, 10-12 to 14 in. high, 3 to 4 tiers, 2 years old, 50c. each. Larger sizes, 6 1/2 to 6 in. pots, 2-3-4 years old, 3-4-5 tiers, 60c.-75c. \$1.00 to \$1.25 each.

ARAUCARIA Compacta Robusta, 6 in. pots, 2-3-4 years old, 10-12-16 to 18 inches high, 3 to 4 tiers, \$1.50-\$1.75 to \$2.00 each.

ARAUCARIA Glauca, 3-4-5 tiers, 2-3-4 years old, 10-12-16-18 to 20 in. high, 6 in. pots, \$1.00-\$1.25-\$1.50-\$1.75 to \$2.00 each.

LANTANIA Borbonica, 25c. each.
KENTIA Forsteriana and **Belmoreana**, 6 in. pots, 6 leaves about 25 inches high \$1.00, 5 1/2 and 6 in. pots, 6 leaves, 20 to 25 inches high 75c., 5 to 6 1/2 in. pots, 6 to 6 leaves, strong bushy plants, 50c. to 60c. 4 in. 18 to 20 inches high 35c. each.
COCOS Weddelliana, 3 in. pots, 10-12-16 in. high, 15c.-18c. to 20c. each.
ARECA Lutescens, 4 in. pots made up, three plants in a pot, 18-20-22 inch high 20c. each.

FICUS ELASTICA or **RUBBER PLANTS**, home grown and Belgium stock, 5-5 1/2 to 6 in. pots, 25c.-35c.-40c.-50c. and 60c. each.
FERNS Boston, 4 in. 20c., 6 in. 35c., 6 in. 60c. each.
Elegantissima, 4 in. 25c., 6 in. 50c., each.
Whitman, 6 in. single plants, strong, 50c., 75c., \$1.00 each; 7 in. as big as a bushel basket, made up 3 plants in a pot, \$1.25 to \$1.50 each.
Pierstoni 4 in. 20c. to 25c., 6 in. 60c. each.
Barrowsii, 5 1/2 in. 40c. each.
Scottii, 4 in. 20c. to 25c., 6 in. 50c., 5 and 5 1/2 in. 35c. and 40c., 7 in. very heavy \$1.00 each.
Ferns for Dishes. A large assortment in 2 1/2 in. pots, \$8.00 per 100.

ADIANTUM Hybridum, the best adiantum for cut purposes, large plants in 6 in. pots, 30c., 35c. and 40c. each.

ASPARAGUS plumosus nanus, 3 in. pots, \$5.00 to \$6.00 per 100; 4 in. \$10.00 per 100; all bushy plants.

CYCAS REVOLUTA (Sago Palm), plants from 5 to 10 leaves 10c. per leaf, above 10 up to 25 leaves 80c. per leaf.

PRIMULA OBCONICA, in bud and bloom, best strain, 3 in. \$7.00 per 100; 4 in. \$10.00 per 100. 5 1/2 in. \$2.00 per dozen.

CHINESE PRIMROSES, 4 in. best Jno. P. Rupp strain, \$10.00 per 100, 6 in. \$2.00 per dozen.

HYDRANGEA OTAKSA, pot grown, 6 in. to 7 in., 25c., 35c. to 50c. each.

AZALEA INDICA, DEUTSCHE PERLE, for Christmas forcing, large specimen plants, \$1.00, \$1.25, to \$1.60 each; other varieties for later forcing, 75c., \$1.00, \$1.25, to \$1.50 each.

BEGONIA, Gloire de Lorraine, 6 in., 60c., 75c., and \$1.00 each.

SOLANUM (Jerusalem Cherries) full of berries 6 in. and 7 in. pots, 25c., 30c., 40c., and 60c. each.

Iowa State College, Dept. of Horticulture and Forestry.
 Ames, Ia., October 24, 1907.
 Mr. Godfrey Aschmann, 1012 West Ontario St., Philadelphia, Pa.
 My dear Sir: The shipment of plants recently ordered from you came to hand in good condition. Kindly accept our thanks for your prompt attention.
 Yours very truly,
 A. T. ERAIN, Associate Professor.

Oakmond, Pa., October 22, 1907.
 Mr. Godfrey Aschmann, 1012 Ontario Street, Philadelphia, Pa.

Dear Sir: I have not had time to write you since I received the plants on the 12th ult. I must state I am well pleased with them; they are fine and doing nicely. Thanking you very kindly for sending such nice plants. Very respectfully,
 R. H. NIEL, florist.

Please mention if plants are to be shipped with or without pots.
 All goods must travel at purchaser's risk. Cash with order, please.

REVIEW OF THE MARKET

NEW YORK. What with the election, the tight money market and the disagreeable rainy weather of Saturday last, the cut flower business is anything but lively. There is a plentiful supply of all seasonable stock, and it seems too bad that better prices cannot be obtained. Chrysanthemums are exceedingly good in quality as a rule, but when clearances are effected, it is only through sacrifice offers being made for job lots; extremely large blooms can be had at \$2 per dozen, and from this figure prices range down to 50 cents per dozen.

Roses are very plentiful now in American Beauty, Bride, Bridesmaid, Mme. Abel Chateau and Richmond, and prices are being cut all along the line. Carnations also are becoming more abundant every day, and on Monday it was apparent that some sacrifice in values had to be made for the first time, seemingly, this season, for considering the state of the market in general, carnations have held up quite well in price, owing chiefly to their not at any time being overplentiful. Longiflorum lilies seem difficult to dispose of just now, and there are many of these in the market. A moderate supply of Lilium rubrum is also coming in.

Cattleyas and Paper White narcissus are arriving, although not in any great quantities as yet. The orchid supply is equal to all demands, and there are many fine varieties on the market just now. Violets do not get plentiful, and prices are holding up fairly well. Gardenias are in quite ample supply, and values range from \$6 per dozen down. Lily of the valley is a hard subject to dispose of; not for a long time has it been so difficult to clear out this product at some price or other.

Tuesday being election day, business was quieter than on an ordinary Sunday; on Wednesday there was a steady downpour of rain, which not only acted as a check on the regular store buyers, but cut off trade that usually comes from the street peddlers and other transient customers. Stock of all kinds has accumulated heavily and fixed values are out of the question.

CHICAGO.—Last week showed a decided improvement over the week before; not that throughout the market a rushing business was carried on, but prices were fairly good and trade on the whole was much more steady. The large quantity of stock shipped for All Saints' Day relieved the market to an appreciable extent. Commencing on Monday and throughout the week the local demand maintained a firmer tone. The dark weather, which has prevailed to an unreasonable degree, has shortened the supply of carnations which judging from the outlook in many houses recently visited would now be plentiful with a generous amount of sunshine to develop the nearly matured buds.

Chrysanthemums are in full supply in all mid-season sorts, and though prices for anything unless it is choice average low, immense numbers are disposed of daily.

Roses and carnations generally are in ample supply for all demands the call having accommodated itself to any curtailment of consignments effected by the dark weather.

Lilies are in plenty; lily of the valley good with brisk demand. Violets are in supply about even to a steady call; green goods about normal.

W. K. W.

ST. LOUIS.—We cannot say that business is dull, nor is it good. Ready cash is tight at present, and business houses are only paying their employees in checks, which is to hurt the trade somewhat. This week society is not displaying too much activity, and few large receptions and weddings are reported. Funeral work, though, has been in plenty the past week. The opening of the chrysanthemum show at Shaw's garden to-day (Monday), Brix's flower show the last three days of this week and the Horticultural Society's show next week should make good advertising for the business in general. The past week the trade could get about anything they wanted in cut flowers or greens from any of our four wholesalers.

In chrysanthemums there is a good run on fancy blooms, and some extra fine Mrs. Henry Robinson, Colonel D. Appleton, Timothy Eaton and Mrs. Perrin are seen, the top price being \$3 per dozen, others sold at from \$1.50 to \$2 per dozen. A fine lot of Ivory brought \$5 per 100; small white in bunches of twenty-five realized \$1 per 100.

As to roses, fancy American Beauty are not any too plentiful; \$4 per dozen is the price for the best; \$2 to \$3 next choice; \$1 to \$1.50 for medium and \$3 to \$5 per 100 for shorts. Other roses bring from \$2 to \$5 per 100;

when extra fancy, \$6 to \$8 is asked. Richmond, Uncle John, Ivory, Killarney and Mme. Abel Chateau are coming in with good stems and color, but the demand is not any too good.

Violets are arriving in fine condition now since the cold nights have set in; these flowers are selling out pretty clean every day, as the supply is yet limited, at 35c. and 50c per 100 for choice. Carnations are not overplentiful, with fancy cleaning up at \$3 to \$4 per 100; good stock brings \$2, and short common, \$1 to \$1.50. All varieties in Enchantress sell well; extra good red in Robert Craig and Cardinal are scarce. Boston Market, Lady Bountiful and White Perfection sell well.

The market in greens is in good condition, with prices as usual.

ST. PATRICK.

BOSTON.—Business is very dull; in fact, the early part of this week there was practically nothing doing, and all kinds of flowers are druggery. Roses are very plentiful, and the best American Beauty are to be seen, but no call for them. Bride and Bridesmaid are also abundant. Carnations sell slowly; there are any number of fine flowers now on the market.

Chrysanthemums are plentiful and while a few sell at fancy prices the majority go slowly. Lilies are more plentiful than they were. Lily of the valley is of good quality. Violets are much improved in quality, but the demand is not what it ought to be. There is always a dull season at this time, which is likely to continue until the chrysanthemums are past.

J. W. D.

INDIANAPOLIS.—The effect of the Eastern financial difficulties are now being distinctly felt in the business circles of the Middle West; to say that their influence is not great in the flower world would be folly. Two manufacturing firms alone have discharged enough employees the past week to effect directly one-twentieth of the total population in Indianapolis. So far no break has occurred in regular counter trade, and funeral work bears up splendidly and keeps the market clear of surplus stocks. The large supply of chrysanthemums makes extensive variations in the prices; medium grades bring \$8 to \$15 per 100; extra select flowers sell as high as \$35 per 100. Good Ivory are numerous at \$5 to \$8 per 100. Choice sprays of white, pink, and yellow find a better market than the large glooms; \$1 to \$6 per dozen is the general retail price for chrysanthemums. Potted plants are of better quality than last season and sell readily at 35 cents to \$1 each.

The local supply of violets is nearly sufficient at 75 cents per 100. Eastern violets retail at \$2 per 100. Lily of the valley is first class at \$4 per 100. A few cattleyas bring 40 cents each.

Roses are certainly of fine quality, but, as is usual at this period, market conditions are not the best. American Beauty sell in advance of the others at \$5 to \$35 per 100. Killarney is often called for at \$6 to \$8 per 100. Many Bride and Bridesmaid are shipped away at \$5 to \$6 per 100; short-stemmed blooms for funeral work bring \$1 per 100.

It seems that all kinds of lilies are now grown at any time. Callas and Harrisii are on hand at \$12 per 100, also auratum at \$15 and ruorum at \$7.50 per 100.

The carnation demand has eased so it is possible to obtain quantities of any color on short notice. Prices are not so firm, at \$2 to \$3 per 100; 60 cents and 75 cents per dozen is asked at the retail shops.

The florists and nurserymen dealing in hardy shrubs, cedars, etc., are enjoying a prosperous season. Winter window boxes and tubs are also much in evidence.

I. B.

Detroit.

Trade Notes.

Local business conditions are very satisfactory with probably a little shade cast over them through slowness of collections. Flowers of all kinds reach the wholesale house in large quantities and are daily cleaned up at good prices. A comparison with the conditions of one year ago shows that at that time we had a surplus of all kinds of chrysanthemums, while this year only yellow varieties begin to lag and we have a great shortage in white sorts. Carnations were a drug one year ago and were

sold at from \$8 to \$10 per thousand; this year they are cleaned up daily at \$2 to \$3 per 100.

On December 19 the Detroit Florists' Club will give an exhibition and hop in Harmonie Hall to its members and friends. Anyone desiring to show novelties should consign them to the Michigan Cut Flower Exchange.

F. D.

Philadelphia.

Trade News.

Business is unusually quiet; there is no bustle around the retail stores, and at the wholesale establishments all kinds of flowers are piling up. Prices are very much off; good chrysanthemums that ought to bring \$3 per dozen can be bought for \$1.50 and are even hard to sell at that figure.

Florists' Club Meeting.

There was a very good meeting of the club on Tuesday last, the magnet being a talk on "Forcing Lily of the Valley" by Walter P. Stokes, which proved very interesting. Some of the principal points brought out were: In the first place obtain first-class pips, have them selected, all of even size. When the pips arrive, which is usually in November, it pays to haul them out to the greenhouses and repack all the cases, using more wet moss and sharp sand, as the percentage of loss would be much less on taking them out of cold storage. He had only had a loss during the last few years of five per cent., but on poor pips and on pips not repacked the loss would be 10 to 20 per cent. When taking the pips from cold storage, take them into heat to thaw out, and let them remain in the cases until all the pips are perfectly dry. In forcing, maintain a temperature of 75 degrees under the sand, but keep the house cool—at carnation house temperature. Cover the forcing boxes with duck or heavy muslin of a dark color; when the foliage is well up, remove this covering and cover with slats about three-quarters of an inch apart. This keeps out the sun and lets in sufficient light to green up the foliage.

Arrange to have a sufficient supply of pips, so that the new stock would not be used until January. It is also better to put some new stock at once in cold storage, as it ages up better. If new stock was used immediately it would take at least six weeks to mature and even then there would be too much loss. At this time of year on old stock flowers can be had in two weeks; on new stock, January to April, it took four weeks, then in July and August, 18 days.

As to cost of production he had figured lily of the valley pips at \$12.50 per 1000, cold storage \$1 per 1000; waste, 8 per cent.; commission on selling, 15 per cent.; labor \$2 per 1000, making \$16.80 per 1000 cost of production.

The most particular thing in all cases is to get pips from a reliable grower, one who would give even assorted stock.

DAVID RUST.

FIRMS WHO ARE BUILDING.

WOBURN, MASS.—Charles Cummings is building a greenhouse, 300 feet in length.

LAKE ODESSA, MICH.—The Lake Odessa Floral Company has added to its plant a greenhouse, 33 x 90 feet.

PLUM RUN, O.—Workman Brothers have just about completed their new greenhouse. It is a fine structure.

PORT RICHMOND, S. I.—J. Schroeder is building two greenhouses for carnations and putting in a large boiler.

OBERLIN, O.—A new greenhouse for the raising of vegetables is being constructed by H. A. Cook. The house is to be 32 by 60 feet.

ALLIANCE, O.—The Leroy L. Lam-born Company has completed an addition to its plant which now contains nearly 30,000 square feet of glass.

SPOKANE, WASH.—The Sookane Nursery Company is making preparations to erect a greenhouse, which, a local paper says, "will probably be the largest in the Inland Empire."

PLYMOUTH, WIS.—Dr. Derrwaldt has just had an addition, twenty feet by fifty feet made to the Hub City greenhouse. This was done in order to meet the increasing demand for potted plants and vegetables for Spring setting.

LATANIAS

Fine strong plants, 2 in. \$3.00 per 100, \$25.00 per 1000; 3 in. \$6.00 per 100, \$50.00 per 1000; 4 in. \$15.00 per 100.

CHAS. R. BUTCHER, Upper Montclair, N. J.

DES MOINES, Ia.—The Iowa Seed Company has just completed another greenhouse 185 feet long. This now makes a total of 32 greenhouses, which this firm is devoting almost exclusively to growing flowering plants for the mail order trade.

MEDICINE HAT, ALBERTA.—The Roseries Company's greenhouses are well under way, the framework is almost completed for three houses, each 300x20 feet in size with boiler house (20x30), and offices. Thirty thousand feet of glass will be required and one carload of it is already on the ground. It is the intention eventually to have the buildings cover five acres of ground, and the company is to spend \$50,000 the first year. Roses will be supplied to the retail florists of the four western provinces. The mild Winters and natural gas for cheap fuel were the chief inducements which brought the Roseries to Medicine Hat. Winnipeg and Calgary capital is largely interested in the enterprise.

Indianapolis.
News Notes.
The F. A. Conway Company has harvested one hundred and fifteen pounds of fancy aster seed. Their new production met with excellent success this season, so Mr. Conway expects little trouble in disposing of the seed.
Thomas Hart, the veteran florist, is to celebrate his eightieth birthday December 6. In appearance Mr. Hart would easily pass for sixty; he attributes his health to constant outdoor application at the flower business.
Bertermann Brothers Company were busy with store decorations the past week.
Charles Wheatcraft has returned from a prolonged visit in Texas.
August Rölker & Sons' shipments of azaleas from August Haerens, Holland, are giving much satisfaction in these quarters.
The flower shows at Henry Rieman's, Weigand's and Bertermann Brothers Company promise to be very successful events. Hill's new roses, also the various new carnations, will be the principal attractions at these places November 13 and 14. Henry Rieman has been putting forth great efforts to augment his collection with all the new varieties obtainable.
Stands are still changing hands in Tomlinson Hall market. Much is heard pro and con as to the various locations assigned. Business is reported as quieter than for some time. An immense supply of chrysanthemums is always on hand.

Baltimore.

Trade Notes.

Continued fair weather is bringing forth large quantities of flowers, although all outdoor stock has been cut off. The prices are rather low and considering the good quality of both roses and chrysanthemums the low prices obtained are somewhat discouraging to our florists. Commencing November 11 there will be a special chrysanthemum week at the Jamestown Exposition. Preparations are making for an extensive floral decoration at the various State exhibits. Growers are kindly invited to ship a few good flowers to the States Exhibit Building; due recognition will be given to exhibitors. Correct name, address, etc., should accompany each shipment. Professor Symmons, Entomologist, State Exhibit Building, will look after the exhibits and will acknowledge each shipment, no matter where it comes from, or how small or large it may be.

Encouraging reports are coming in, and indications point to a most successful State horticultural meeting, which will be held December 3-6 at the Fifth Regiment Armory, Baltimore. Every branch of horticulture will be represented. The Maryland Corn Breeders' Association has been given space for a full and complete display. The Baltimore florists, not having a Fall show of their own, have joined to make this exhibition, which is of special interest to the people and the trade in general, a success. Valuable prizes will be given; no admission fee will be charged. The larger exhibitors will be furnished with blue-prints showing the floor arrangement by applying to Secretary Symmons, College Park, Md. No charge is made for space, and everybody both in and outside the State is invited to participate.

Among visitors in Baltimore this week were representatives of Vaughan's Seed Store, Chicago; H. F. Michell Company, Philadelphia; Peter Henderson & Company, New York and W. Atlee Burpee & Company, Philadelphia.

It is hoped the one million dollar loan for the extension and improvements of the Baltimore park system will be approved by the people at the general elections this week.

R. Vincent, Jr. & Sons Company have an extensive collection of hardy pompon chrysanthemums; they are making preparations for exhibiting same in the various large cities in the East.

John Cook will exhibit his fine pink seedling rose. Mr. Cook wishes to make these exhibits before advertising this rose. C. L. S.

DAYTON, O.—Ritter, the florist, was victimized recently by a very smooth young chap who purchased a dollar's worth of flowers and offered in payment a \$15 check. He received in consequence a dollar's worth of flowers and \$14 in cash. The check which the florist presented at the bank proved to be worthless.

MARYVILLE, MO.—Peter Mergen is erecting an office and flower store.

The Association of Wholesale Florists' Employees on Wednesday evening of last week added one more to the series of social successes which stand in an unbroken

Defiance, the new brilliant scarlet carnation, a seedling for which W. N. Rudd has been at work for years and which will be disseminated this season jointly by Jensen & Dekema of Chicago and the originator, is now fairly launched upon the market and great expectations as to its future are indulged in by those who are familiar with the variety and its limited history. As seen growing this week at the Foster avenue range of Jensen & Dekema it certainly bids fair

to materialize all that is prophesied for
it, and it may surely be stated that no
exaggerations have been indulged in as
to its various excellent qualities. Visi-
tors to Chicago during the show, or at
all times for that matter, are cordially
invited to visit the Jensen & Dekema
establishment and see this and several
other of the newer varieties of carnations
as grown by this successful concern.

W. W. Randall returned on Monday
from his three weeks' vacation spent at
his former home in Pennsylvania.

C. L. Washburn says a good many of
their customers are having Fall openings
which call for a small number of each
of all the novelties and fancy lines. To
such an extent is this being carried that
he fears it will interfere with their ar-
rangements for exhibiting at the show.

A. L. Vaughan has been invited to
act as one of the judges at the flower
show at Little Rock, Ark., November 14-
16, and will leave for that city next
week.

Auton Then has taken a stall in the
Flower Growers' Market, leasing the
only unoccupied space available.

J. A. Valentine of Denver was one
of the earliest visitors to arrive.

The flower show has received a great
deal of advance attention by the daily
press, generous articles with numerous
illustrations descriptive of special fea-
tures to be exhibited having adorned all
the papers, especially the Sunday edi-
tions. The Sunday Tribune devoted a
color page to a fine reproduction of the
Mrs. Marshall Field rose. Besides adver-
tising the show all these flower "write
ups" are a decided help to the trade in
general.

E. E. Pieser, who takes more than a
passing or superficial interest in mon-
etary problems, has developed a plan
which he claims with apparent justifi-
cation would preclude the possibility of
a money panic such as at present exists.
It has been submitted to the financial
editor of the Tribune for consideration.

It is seldom if ever the public has
been treated to a more beautiful, elab-
orate, and finely appointed chrysanthemum
and orchid exhibition than Superintendent
Frey offers at the present time,
week days until ten o'clock and Sundays
until six o'clock p. m., in the show
houses at Lincoln Park. The plants and
the arrangement are conspicuous fea-
tures, the number and variety, both be-
ing very large, of all sizes, heights and
forms, which lend readily to the banking
effect desired as they are arranged and
intermingled with an assortment of ferns
and decorative plants. The general color
scheme which has been artistically ex-
ecuted is the massing of the colors and
by shades blending where possible one

THE BEST WAY to collect an account is to place it with the National Florists' Board of Trade

56 Pine St., New York

WHY? Because many debtors will pay the
Board fearing otherwise a bad rating in our
Credit List. Full information as to methods
and rates given on application.

into the other. Mr. Frey has a large
assortment, in the neighborhood of one
hundred chrysanthemums, constituting
what may be termed a distinct strain
combining the pompon, anemone and
single classes embracing a number of
new forms and many new shades par-
ticularly desirable for and effective in
plant form or for dainty decorative ef-
fects.

Remarkable success also has been
achieved this year with the Selfridge
and Lincoln Park collection of orchids,
the cattleyas especially being prominent,
large numbers of which, intermingled
with other less familiar varieties, form
an attractive feature on the left side of
the main show house.

A great deal of time and money has
been devoted to a new system and ar-
rangement of electric lights overhead, be-
hind, and among the plants which during
the evening produce an effect of in-
describable beauty.

This exhibition, which will continue
for some time but open in the evening
only for about two weeks, reflects great
credit upon the park and offers an op-
portunity of which all should avail
themselves, and the many horticultural
visitors to Chicago at this time should
not fail to make a note of the fact that
it is a delightful trip for some evening.

Wm. K. Woon.

Poughkeepsie, N. Y.

The Wilson Floral Company is the
latest addition to the trade ranks in
Poughkeepsie, a new store on Main
street being recently opened under the
above title. Mr. Wilson intends to do
a cut flower and seed business, also to
devote considerable of his time to land-
scape gardening. Before coming to this
place this company was in business at
Gloversville and previously was at
Scranton, Pa.

Conrad Gindra, a son of David Gindra,
who for many years has been identi-
fied with the horticultural interests of
Dutchess County, has entered into the
commercial business on the Hyde Park
road adjoining the Beek estate. Mr.
Gindra has two large houses of car-
nations in splendid condition, as well as
bulbous and other stock that he intends
to sell at wholesale. David Gindra is
now in feeble health.

M. J. Lynch had an elaborate wed-
ding decoration on September 28. The
occasion was the Adams-Delano nup-
tials that were celebrated at the resi-
dence in Barrytown. The house was
decorated with lilies and smilax. Roses
and Farleyense ferns were used exten-
sively on the tables. It was a good or-
der and was executed by Mr. Lynch
in a manner that was satisfactory to
the guests and all concerned.

The Haggerty Floral Company made
a splendid exhibit at the Dutchess Coun-
ty Fair recently held at the Poughkeepsie
Driving Park. Their display of
gladioli and potted plants secured for
them a liberal share of the premiums.

Michael Smith, the South avenue florist,
has recently taken down his green-
houses and gone out of the business.

The "Saltford Flower Shop" contin-
ues to do a prosperous business on
Main street. The new conservatory on
the roof at the rear of the store is at
all times attractive. Mr. Saltford says
he is well pleased with it, as it brings
good returns on the investment.

Since the Saltfords have leased the
Reylea greenhouses on Orchard street it
gives this firm fully 50,000 feet of glass
to operate. The output of this glass
area is always at the disposal of the
patrons of the "shop."

B. Willig, one of the largest violet
growers in the Poughkeepsie neigh-
borhood, an account of whose place ap-
peared in The Florists' Exchange a few
months ago, is now devoting part of
his attention to carnation growing. One
of his large violet houses is this season
planted in high grade carnations with
promising results.

J. M.

WHITE MARSH, MD.—R. Vincent,
Jr. & Sons Company are propagating
their new geranium Dagata very exten-
sively. Almost an entire block of
houses is to be devoted to the increas-
ing of this variety, while 20,000 more
are in another house. The cuttings are
rooting very satisfactorily.

Richard Vincent, Jr., and his son
Thomas, attended the New York exhibi-
tion this week.

THE TRADE ONLY—When Writing Please Mention THE FLORISTS' EXCHANGE.

Boston.

News of the Week.

The regular monthly meeting of the directors of the Boston Co-operative Flower Growers' Association was held Saturday evening.

Thomas Roland of Nahant is sending in some fine cypripediums to the market. David Lumsden has been appointed superintendent of greenhouses at the New Hampshire Agricultural College at Durham.

Anderson & Williams are having a fine cut of bouvardia at the present time. Mann Brothers are practically the only growers who have a continuous supply of lilies these days.

Henry M. Robinson & Company celebrated their first anniversary in the cut flower trade on October 29, when many of their patrons and friends met in the evening and wished them Godspeed.

C. W. Ward of Quincy is cutting some fine Mrs. Clay Frick chrysanthemums.

Albert Scott of West Roxbury makes a specialty of bouvardia and it is exceptionally fine this season.

E. Phelman, the popular salesman for H. M. Robinson & Company, has returned to his duties after having been confined to his home for two weeks with a lame foot.

William Nicholson of Framingham has been spending a week in New York and vicinity.

Edward Winkler of Wakefield is happy over the arrival of a baby girl at his home last week.

The Waban Rose Conservatories entertained about thirty-five of the buyers for the Boston stores at their greenhouses on the third instant.

J. T. Butterworth has returned from several weeks spent in England; a fine shipment of several cases of orchids preceded him. His Cattleya labiata are exceptionally fine this season.

J. W. DUNCAN.

Washington, D. C.

A Chrysanthemum Show.

During the past week the Propagating Gardens, under the superintendency of Charles Henlock, and the greenhouses of the Department of Agriculture, under Mr. Burns's supervision, offered the public one of the best exhibitions of growing chrysanthemums ever seen in this city.

At the Propagating Gardens the number of varieties grown was not as large as at the other. All the plants were grown to single stem in solid beds and arranged in groups of about three dozen of one variety, thus affording the grower an opportunity to notice the evenness with which they flowered, along with other good points. All were specimen blooms.

At the greenhouses of the Department of Agriculture, a whole house was devoted to the display of a beautiful arrangement of the most gorgeous colors to be found in chrysanthemums. All of the latter were pot-grown, and comprised many varieties and classes, from the enormous single stem varieties of the Japanese type, to the modest pompons. Many were specimen plants and flowers; eight feet was about the highest of the single stem sorts.

Among the best shown in each exhibition were Beatrice May and Lanona, which seemed to attract special attention, while Harold Wells and many other fine whites were praiseworthy. Among the pinks, Morton F. Plant and M. A. Monmouth attracted all; the last named at the Agricultural greenhouses had some ten or twelve flowers to each plant. In the newer yellow shades Mrs. Roosevelt was fine; George Hunt, Rey d'Italie, Henry Sinclair, and many others were also fine. There was a very fine collection of red in Mr. Henlock's collection consisting of S. T. Wright, Merstham Crimson, Dazzler and Casco.

The exhibitions were to continue as long as the flowers were good.

James Quinn, formerly foreman for A. B. Garden, is in charge of the two excellent new rose houses in Mr. Burns's range. The houses are 142 feet long and 40 feet combined width. The benches have tile bottoms in pieces measuring 10 by 21 by 1 inch, which butt over a T-iron in the center. The construction throughout is of iron, and was designed and erected by Mr. Burns. The stock consisting of Golden Gate, Kaiserin Augusta Victoria, Richmond and Killarney is magnificent.

The Masonic funeral of Mr. Steumetz, the latter and furrier of this city created an unusual demand for some fine

Hammond's Grape Dust

This trade-mark is registered in U. S. Patent Office.

KILLS MILDW ON ROSES, CARNATIONS, VIOLETS AND CHRYSANTHEMUMS

ROBERT SIMPSON, Rose Grower

Dear Mr. Hammond:

Clifton, N. J., Oct. 11, 1907

In reply to your inquiry regarding my experience with Grape Dust, would say that I am glad to be able to say a good word for the article in question, because I have found it so generally satisfactory when used for mildew on roses.

I do not know anything about its constituents, nor do I care so long as it does the work, and is as economical as anything else on the market.

During the summer when the steam pipes cannot be brought into use to check mildew, and dusting over the foliage has to be resorted to, we prefer to use Grape Dust rather than sulphur, because it is so much lighter and finer in texture: a given number of pounds will cover more than twice the number of plants: will cover them more thoroughly, and Grape Dust can be put on with a bellows in about one-fourth the time that would be required for sulphur.

The fact that I have used it continuously for ten or twelve years should prove to you that I consider it the best article on the market for the purpose for which it is used.

With best wishes I am,

Yours very truly,

ROBERT SIMPSON

Put up in 5 and 10 lb. packages at 7 cents per lb.; also in 25 lb. bags, 100 lb. kegs, and in barrels of 200 lbs. net. Kept in stock and sold by the leading Seedsmen in America. **USE "SLUG SHOT" FOR SOW BUGS, ETC.**

HITCHINGS & CO

NOT FATAL,
BUT COSTLY

A grower in this advanced age who builds a house with wooden plate and nailed-on bars, when our steel eave and roof bar bracket would increase the life of his house twice over, while adding to the first cost but a small per cent., is certainly not what would be called a careful buyer.

This point in our construction is not alone a protection against decay, but a powerful brace and stiffening member to the entire house. Will sell materials for the entire house, or the steel eave and brackets alone. Write us.

HITCHINGS & COMPANY

GREENHOUSE DESIGNERS AND BUILDERS

Manufacturers of Heating and Ventilating Apparatus

1170 Broadway, New York

New York.

News of the Week.

The November meeting of the New York Florists' Club will be held in the rooms in the Murray Hill Lyceum, Thirty-fourth street, near Third avenue, on Monday next, the eleventh. The essay committee has provided a treat for this meeting in the form of a lecture on "School Gardens," to be delivered by Henry Saxton Adams of Wellesley, Mass., a well-known authority on the subject. This will also be ladies' night; the house committee will provide suitable refreshments in their honor, and it is hoped that a large number will be present. The nominating committee will also report at this meeting; and it is expected that several exhibits of chrysanthemums and other flowers will be staged; this should, therefore, be one of the best meetings of the season.

The Wholesale Florists' Association has made rapid progress since becoming organized a few weeks ago, and is already putting into effect several features, the establishing of which were the main incentives in the formation of the association. It is pleasing to know that the prominent retail dealers throughout the city are in perfect accord with the arrangements the wholesale flower dealers wish to establish, and the fact that there has been a day set—the 25th of each month—for the settlement of all accounts is perfectly agreeable and satisfactory to a majority of those in the retail business.

Many of the larger retail florists in the city are so much in accord with the recently organized Wholesale Florists' Association that they are refusing to buy flowers from dealers who have not yet become members thereof.

The leading papers of the city are devoting much space to explaining the fact that the worst of the banking troubles are over, and the situation in general is improving rapidly. The effects of such improvement, if there be any, have not seemingly reached the florist trade, and business in general is very poor.

A card from L. W. Wheeler informs us that he is at San José, Cal., associated with the Braslan Seed Growers' Company.

L. B. Coddington, the well-known rose grower of Murray Hill, N. J., started for a pleasure trip across the Atlantic on Wednesday, November 6.

The annual flower show of the New Jersey Floricultural Society was held this week, Thursday and Friday, November 7 and 8, in the hall of the Women's Club, East Orange, N. J. The annual exhibition of the Tarrytown Horticultural Society was held on Wednesday, Thursday and Friday, November 6, 7 and 8, in the Music Hall, Tarrytown, N. Y.

Richard Vincent, Jr., and his son, Thomas, were present and exhibiting at the American Institute show November 6 and 7. They left New York Thursday night to be present at the Boston show on the 8th and 9th; and will leave Boston by steamer for the Jamestown Exposition Saturday afternoon, returning to White Marsh, Md., on Tuesday, November 12. Mr. Vincent says that their new range is fully covered in and ready for piping and the interior work. He reports several very large sales of dahlia

roots and recent great activity in handling same.

Mr. and Mrs. George Stumpp and child (of Stumpp & Walter Company, seedsmen), left Wednesday by the steamer Antilles for El Paso, Tex. They will be gone for a month.

St. Louis.

The Week's News.

Martin Renkauf, traveler for H. Bayersdorfer & Company, Philadelphia, was interesting the trade last week in holiday novelties. He has just returned from the Coast, and reports a great run of trade there. He goes from here to visit the Chicago flower show this week, thence working his way home.

Robert P. Tesson will be married next Thursday at Christ Church to Miss Harriet Wilkerson; they will reside at Sunny Point, West Forest Park.

Adolph Brix visited Chicago the past week to buy plants for his public flower show which opens next Thursday. Mr. Brix has made great preparations for this exhibition, and says he will surprise visitors with design work and table decorations. The club members will visit the show on Friday night.

Tom Carroll, once prominent in the florist business here and who had to retire on account of becoming blind, lost everything he had by fire the past week. His wife in trying to save him was burned to death, but he was saved. Expressions of sympathy were heard on all sides among the trade. He is still an honorary member of the local Florists' Club.

Monday, November 4, was opening day for the public chrysanthemum show at the Missouri Botanical Garden; a large number of visitors passed through the gates. Superintendent H. C. Irish and Messrs. Fulgraf and Pring explained to the visitors the merits of the plants. Some extra fine specimen plants were very attractive; also the grafted plants. The large tent in which the show is held is situated near the main entrance gate, and the gatekeeper says the first day's attendance was much larger than last year's.

John Held, a South End florist, who kept a revolver under his pillow for protection against robbers, had the weapon stolen the other night by a burglar who entered the house while Mr. Held was firing at the greenhouses. On his return his wife and one of the workmen were found chloroformed. A number of valuable articles were stolen, including Mr. Held's best overcoat and a new suit of clothes.

Frank Buchsbadt, until recently with Michel, is now at the Grand Leader, a large department store, selling plants which this firm is advertising as a specialty. It is said that a floral branch will be added to the store before the first of the year.

The wife of Henry C. Ostertag died Sunday last, after an illness of three weeks. Her husband and five children are left to mourn her loss. The funeral took place Wednesday afternoon; many friends in the trade attended and expressed their sympathy. The St. Louis Florists' Club, of which Mr. Ostertag is a member, sent a large floral wreath.

The St. Louis Florists' Club will hold its regular monthly meeting next Thurs-

day afternoon at 2 p. m. in the Burlington Building. As this will be show week, a great many visitors are expected in the city, and President Young extends to all an invitation to meet with us. There will be plenty of good things to eat, drink and smoke, and other entertaining features will be added to the program.

All the members of the Horticultural Society are hustling for the success of their show, which opens Tuesday, November 12. The window posters are out and are attractive. A good delegation of florists from here will visit the Chicago exhibition this week. ST. PATRICK.

New Orleans.

News Notes.

All Saints' Day in New Orleans takes the place of Decoration Day in the North. There are very few graves which go unadorned on this day. A few years ago the principal flowers used were dahlias and a white pompon chrysanthemum which was not even called a chrysanthemum, but was always spoken of as the "All Saints' Day flower." But very few of these are used nowadays. The early varieties of the large chrysanthemums are grown in such numbers that when one visits the various growers he can scarcely realize that the blooms can be disposed of in one day. But it appears there were very few left over after the two days' sale, and in addition there were importations from the Western cities which usually supply this market, not only with chrysanthemums, but with roses and carnations.

The florists' stores were veritable chrysanthemum shows for a few days preceding the first. The threatening weather did not keep the people from visiting the cemeteries.

The use of artificial designs is less extensive every year, but there are still some used. Even designs of natural flowers are not as numerous as formerly.

Wm. Rosemius had the misfortune to lose his house by fire while he was at the market selling his chrysanthemums. The fire is supposed to be of incendiary origin.

The gardens of the South are gay at present with those two Autumn glories—Antigonon leptotus and Cassia corymbosa. CRESCENT CITY.

Worcester, Mass.

By the will of the late O. B. Hadwen, president of the Horticultural Society, not only Worcester but the horticultural world at large is benefited. To Clark university and college is left the fine home place of Mr. Hadwen, consisting of more than twenty acres, which with the buildings is assessed for \$20,000. This virtually gives Worcester another park.

He also gives to Clark university and college \$1,000 to embellish their grounds with ornamental trees and plants.

Mr. Hadwen's real estate holdings in Worcester are assessed at about \$60,000. CAROLUS.

BEVERLY, MASS.—M. Grady & Son have been awarded the contract for the complete stone work and the laying out of the landscape gardening for the new schoolhouse at Ipswich, Mass.

WM. H. KAY, CO., 244 Fulton St. N. Y.

ADVERTISING in THE FLORISTS' EXCHANGE not only pays, but is far reaching. Messrs. R. Vincent, Jr. & Sons Co., of White Marsh, Md., this week showed us an order for geraniums received from a grower in Tokio, Japan, crediting the order to their advertisement in THE FLORISTS' EXCHANGE.

To have geraniums reach far-off Japan in good condition is somewhat of a proposition, but the Vincents, with their large experience in packing, expect to be able to deliver the goods in good shape for growing on.

TOLEDO, O.—Thirteen members of the Florists' Club visited Detroit, Mich., on Friday, November 1, and took in several of the growers' places. An enjoyable time was spent, neither the day of the week nor the number of visitors being attended with any unlucky or untoward circumstance.

TEWKESBURY, MASS.—Lou Smith, who recently married, was presented by his friends on November 1 with a bed lounge. The presentation speech was made by Mr. Reidy, assistant to Mr. Smith. An enjoyable evening was spent.

Heating.

Growers' Problems Solved by U. G. Scollay.

I have just finished piping two greenhouses running east and west, the west end joining the dwelling-house. My boiler is in the east end well down under a shed. I am using the down-hill system, and have my expansion tank in the house, and connected to the returns under the north bench. I have the city water under the middle bench at a pressure of 60 pounds. Could I attach this to the boiler and do away with the expansion tank? Would this be safe and where should I attach it? T. O.

South Dakota.

—We have known of a hot water heating system being connected direct with the street pressure. We have also known that it has worked. We have also known of very serious accidents occurring from such practice, owing to the pipe between the city main and the system becoming clogged or stopped. Serious trouble could result from such a case. Our practice is usually to have a separate expansion tank for each heating system. It is the safest practice to follow.

is not always seen in the
total figures on an estimate
—much depends on the
material included in the
bid. It is an actual fact
that our material is made
different and better than
any other, for which reason
our price is often more than
the prices of some other
firms. Even on the hinges
ours are better, as they are
made for six screws in
place of four, and are a
heavier pattern with better
galvanizing. It's these
small things all the way
through that means a sav-
ing on repairs after a while.

C. EISELE, 11th & Roy Streets, PHILADELPHIA, PA.

"THE BEST INVESTMENT I EVER MADE."

Is the verdict of one of the largest rose growers who placed two of these GREENHOUSE BOILERS instead of two others of well known make.
 Estimates furnished for heating plants erected complete, or for material only.

SUMMER IN WINTER

BY USING

Standard Greenhouse Boilers

One cent gets our catalog.

GIBLIN & CO., Utica, N. Y.

An Object Lesson

Some half dozen customers of ours did not have their houses completed until long after the Convention in August, just because they paid no attention to the advice given in our Ads. all through last November and December, to place their spring orders THEN. We did our part, and even worked overtime, but with so many houses ahead and each being turned out of the factory in the order given, such delays are bound to happen in the rush season, even though we have the largest greenhouse factory in the world, and every modern facility to push work. So take warning, for indications are that next spring will be just like last. Get your order in the factory during the winter months. Write us—get our catalogs.

We make every part of a greenhouse but the glass. We sell any part.

Novelties in Flower Seeds for 1908

My new list has been published now and may be had on application.

FRED ROEMER, Seed Grower
QUEDLINBURG, GERMANY**Seed Trade Report**

AMERICAN SEED TRADE ASSOCIATION

George S. Green, Chicago, Ill., president; M. H. Duryea, New York, first vice-president; F. W. Bolgiano, Washington, D. C., second vice-president; C. E. Kendel, Cleveland, O., secretary and treasurer; Leonard H. Vaughan, Chicago, assistant secretary.

An announcement of the death of D. M. Ferry, seedsman, Detroit, Mich., appears in our obituary column this week.

MILWAUKEE, WIS.—James Currie of Currie Brothers is contributing to a local newspaper a series of interesting articles on city gardening.

The Secretary of State for Michigan estimates the 1907 bean crop of that State at 4,829,032 bushels, harvested from an area of 371,464 acres, as against 5,158,160 bushels in 1906 from 368,440 acres.

M. JACQUES ROLLAND, Nimes, France, conducts a seed trade that began in 1680, 227 years ago, and has been continued without interruption ever since. M. Rolland modestly wonders if he can count his business to be the oldest one in the world's seed trade.

FLORAL PARK, N. Y.—C. L. Allen, the veteran seedsman, who has been ill for some time, is now, we are glad to say, convalescing nicely. Mr. Allen was traveling when he became sick at Syracuse, N. Y.; he went as far as Reading, Pa., but was there compelled to return home.

NEW YORK.—J. J. Comont of Carter, Dunnet & Beale, London, was in the city this week on his way home. Mr. Comont has visited the United States in the interests of his firm each year for a quarter of a century, and reports the present trip one of his most successful.

EVANSVILLE, IND.—According to an Indianapolis dispatch the American Pure Seed Company, a large corporation of that city, will be removed to Evansville. Notice of the increase of stock value from \$10 to \$25 a share, with the reduction of the directorate from eleven to five, and the removal of headquarters to this city, was recently filed with the Secretary of State. J. A. Everitt is president of the company. Mr. Everitt is known all over the country as the reputed organizer of the American Society of Equity and until recently, when he was made the object of concerted attack from within his organization, stood foremost in the ranks of those combined to secure equitable prices for farm products. He resigned under the severe fire brought against him at the last national meeting of the association in Indianapolis two weeks ago. Charges had been preferred that he was using the presidency of the national society as a means of private gain. There is no information that the removal is in any way due to the recent division of the Equity Society.

THE BEAN INDUSTRY OF ONTARIO, CAN.—During the fiscal year 1906, the exports of beans from Ontario were 88,663 bushels, with a value of \$139,908. The bean growing section of Ontario is confined to that part south and west of a line north from Port Burwell to about Ingersoll, and west to near Sarnia. However, there is only a small portion of this district where beans are grown to any

Prices Advertised in these Columns are for

THE TRADE ONLY—When Writing Please Mention

THE FLORISTS' EXCHANGE.

extent. The average bean crop in this whole territory comprises about 45,000 acres, and produces on an average about 750,000 bushels each year. Of this 45,000 acres, nearly 40,000 are in the townships of Harwich, Howard and Oxford, in Kent and in Arlborough, West Elgin, the remaining 5,000 acres being scattered here and there throughout the rest of the district.

THE CROP REPORTING BOARD of the Bureau of Statistics of the Department of Agriculture finds, from the reports of the correspondents and agents of the Bureau, as follows: The preliminary returns in the production of corn in 1907 indicate a total yield of about 2,553,732,000 bushels, or an average of 26.0 bushels per acre, as compared with an average yield of 30.3 bushels per acre (2,927,416,000 bushels), as finally estimated in 1906. The general average as to quality is 82.8 per cent., as compared with 89.9 last year. It is estimated that about 4.5 per cent. (130,995,000 bushels) of the corn crop of 1906 was still in the hands of farmers on November 1, 1907.

The preliminary estimate of the average yield per acre of flaxseed is 9.0 bushels, as compared with the final estimate of 10.2 bushels in 1906. A total production of 25,420,000 bushels is thus indicated, against 25,576,000 bushels finally estimated in 1906. The average as to quality is 89.7, against 92.7 in 1906.

UNCLE SAM'S SEED SHOP SUFFERS FROM FIRE.—On page 632 of last week's issue, brief reference was made to the loss by fire sustained by the Department of Agriculture at Washington, D. C., on November 6, 1907, when damage amounting to \$75,000 resulted in the government seed distribution building, at 221-223 Linwood place, southwest. Later advices show that the building is occupied by Contractors E. A. Cole, H. J. Westwood and H. E. Crissey, who have charge of packing garden and flower seeds for the Department of Agriculture. At the time the fire occurred about \$75,000 worth of seeds were in the building, and Dr. B. T. Galloway, Chief of the Bureau of Plant Industry, who has charge of seed distribution, thinks about one-half of them were destroyed. Contractor Cole says the damage to the property belonging to his firm will amount to about \$15,000, while Acting Chief Wagner says the damage to the building will be about \$15,000 or \$20,000, making the total amount of damage about \$75,000. The building and seeds were fully insured, but Contractor Cole thinks the damage to the stock of his firm is slightly greater than the amount of insurance carried. About eighty persons, mostly young women, were thrown out of employment by the fire, but Dr. Galloway thinks the seeds which were not destroyed will be dried out and ready for packing in a few days.

Dr. Galloway says that the destruction of so large a quantity of small seeds would greatly hamper the distribution the coming year. The department, he said, makes its purchases a year ahead and he thought it would be impossible to duplicate the seeds which were destroyed. The larger seeds, such as corn, peas and beans, he explained, were stored on the ground floor of the building, and while the water reached and soaked them, he thought they could be dried out and packed for distribution in a short while. In order to save them, he said, he would put a corps of laborers at work and have them removed from the

damaged building. Most of the seeds destroyed were the smaller garden and flower seeds.

Contractor Cole said that the weight on the three floors of the building was great, but he could not give an idea as to the number of tons of material and seeds there. Mr. Cole said his firm was under contract to fill 37,000,000 packages, and 7,000,000 of them had been filled. The members of the firm of contractors reside at Fredonia, N. Y., Mr. Cole being the only member in Washington.

The origin of the fire has not been determined.

THE CABBAGE SEED CROP FOR 1908.—The outlook for the coming crop of all the Brassicas is by no means flattering. The sowing of the seed was attended with difficulty, owing to the dry weather in July. The plants made a slow but sturdy growth. The time for setting came, but few would take the trouble to puddle them in, while others could not for want of water. The result is a much reduced average; at the best the plants are not one-half the average size, although very strong and vigorous.

The time for inspection is at hand, the "rogues" are being eliminated and at the approach of Winter the plants will be put in their trenches, and undergo the usual chance of keeping through the Winter. Should that season prove intensely cold, many pieces have not strength sufficient to withstand its rigors. On the other hand, should the Winter be mild there is danger of the young plants making a tender growth, which impairs vitality.

Looking on all sides the prospect is not a cheerful one, and taking into consideration the fact that stocks on hand, particularly of the Wakefields, are very much depleted by greatly increased sales to the Southern trade, it is very doubtful if the supply will be equal to the demand the coming season.

The kale question is also a very serious one. The seventy successive days on Long Island without rain has kept the plants in check, and a very cold Winter would be fatal to the crops.

The rutabaga crop is all right, as the plantings were in a section that was occasionally favored by showers.

IMPORTS OF SEEDS, ETC.—November 4 and 5.—American Express Company, 150 bags clover seed; Murray & Nickell Manufacturing Company, 201 bags seed; L. J. Spence, 400 bags sugar beet seed. November 6.—C. C. Abel & Company, 42 cases bulbs; Armstrong & Patterson, eight cases plants; E. T. Buckingham, seven cases plants; H. Frank Darrow, five cases flower roots; J. W. Hampton, Jr. & Company, one case bulbs, etc.; Hamburg-American Line, seven bags flower seed; Peter Henderson & Company, 16 cases bulbs and plants; McHutchison & Company, one case plants; R. F. Lang, one case bulbs; Maltus & Ware, 173 cases plants, 181 cases roots, 10 tubs plants, 29 cases trees, 108 cases bulbs, plants, etc., 45 cases trees and shrubs; McHutchison & Company, 97 cases plants, nine cases plants; seven cases plants; P. H. Petry & Company, three cases plants, etc., 23 cases plants; T. C. Pollock, seven cases plants; C. B. Richard & Company, 39 packages plants;

G. W. Sheldon & Company, 36 cases trees; J. TerKule, eight cases bulbs, J. M. Thorburn & Company, 34 cases bulbs, three cases bulbs; J. TerKule, one case bulbs; Vandegrift & Company, 55 bags seed, two cases trees; Vaughan's Seed Store, 34 cases trees, 120 packages bulbs and plants; C. C. Villegas & Company, six cases plants, November 7.—H. Frank Darrow, 77 cases plants; P. Einsman, 17 cases plants; Wm. Elliott & Sons, two cases plants; J. W. Hampton, Jr. & Company, two cases plants; C. A. Haynes & Company, nine cases plants; McHutchison & Company, 97 cases plants, two tubs laurel trees; Marcus Mutilled, four cases plants; McHutchison & Company, 97 cases plants; August Rötker & Sons, 24 cases plants; C. B. Richard & Company, 13 cases plants, 69 cases plants, 250 tubs laurel trees; Stump & Walter Company, one case plants; Vandegrift & Company, 12 cases palm seed; Maltus & Ware, three cases orchids; H. Frank Darrow, 155 cases lily of the valley pips; Peter Henderson & Company, 70 cases seed; Maltus & Ware, 39 cases lily of the valley pips; Julius Roehrs Company, 32 cases live plants; S. Stern, 213 cases lily of the valley pips; Vaughan's Seed Store, 50 cases lily of the valley pips; Peter Henderson & Company, four bushels seed; Weber & Don, 17 cases mushroom spawn.

Seed Trade Notes.

We have had another good week of bulb trade, with the natural result that stocks begin to show that the end of the season is approaching. In regard to surpluses there seem to be very few indeed, when we take the whole list of bulbs into account. Roman hyacinths have sold with less vim than usual, and some large lots have the past fortnight been disposed of at slight concessions to close them out. It would seem, in fact, that all the items that have gone at all slowly this season have been florists' bulbs. Take, for instance, *Lilium Harrisii*; not for many seasons have they sold harder, all growers seemingly fighting shy of them. This contraction of sales of *Lilium Harrisii* has been gathering headway, so to speak, ever since this lily began some years ago to develop disease, and as the strange part of this disease is that it does not appear nor can it be detected until the bulb has made a growth of about one foot or so, buyers are unable to protect themselves against it, hence the inclination to leave the bulbs alone as much as possible. I believe absolutely healthy bulbs will not come to us from Bermuda until such time as the bulb growers there give their stocks ample time to ripen properly, as they used to do in the old days when this disease was unknown.

The foreign steamers the past week have brought in a large part of the late maturing stocks, such as spiraeas, *Anemone japonica*, various sorts of lilies, including *Lilium giganteum*, and lily of the valley clumps. Advices are at hand also reporting that lily of the valley pips will soon be here; and if the fine planting weather will only continue until the Japan stock (including *Lilium auratum*, *speciosum*, etc., and *Iris Kempferi*) has time to get here, and be planted this Fall, our bulb season will turn out to be a very satisfactory one.

There has been quite an active demand this past week by advance buyers of seeds for Spring sales, many dealers seemingly having an idea that they can pick out the scarce items and purchase them now; and later toward selling time fill in their remaining needs. But it will be found that the larger seedsmen are not to be caught napping. You will remember that some weeks ago I expressed the belief that the coming season of 1907-1908 would be a good one to stick close to your regular seedsmen, and let him fill your entire list of seed requirements. It is not right to expect, neither is it fair to a wholesale seedsmen's regular customers that he (the wholesale seedsmen) should fill outside orders for a few scarce items to the injury of his regular trade. I am very much afraid that as yet some dealers who sell seeds, in connection with other lines of trade, do not realize how short seeds are.

I have for some little time been watching with interest the outcome of the plans of the Southern Texas Growers' Association, as regards onion seed supplies for its members. The varieties of onions practically planted by these growers are White Bermuda, and White

Stokes Seed Store.

219 Market St., PHILADELPHIA

Bermuda Crystal Wax, with some Red Bermuda onion. It seems that this association has very recently sent an agent to the Tenerife Islands, who has placed contracts there for the delivery of these varieties of onion seed, covering a period of five years, beginning in the Fall of 1908. The agent who placed these contract orders is reported to have told his association: "I did not buy a very large amount of seed for 1908, as some members of the association are reluctant to take hold of a new proposition such as this will be." The reluctant onion growers have been for years buying their supplies of seed of the regular seedsmen, and having obtained splendid crops are satisfied with conditions as they are at present. Again, their agent is reported as saying: "However, I am quite sure that in my contract I have thrown more safeguards around the seed business than any other buyer that has ever been on the Islands." I will not take more space at this time to discuss this matter pro and con. I do not know the capabilities of the gentleman who represents this association as regards the seed business; but I do know that it takes all the experience and life-time care of the seedsmen to be able to supply the planter with reliable seed. Therefore I feel that the Texas onion growers who are reluctant to change from their regular seedsmen are at least carefully conservative.

As the weeks pass along toward the seed season, holders of what onion seed there is seem more and more loth to part with it until some kind of a market price is fixed. That it will be a high one there can be no question. As regards onion seed for another year (that is 1909), seedsmen do not feel over sanguine, even supposing we may have the coming Summer a satisfactory season for the production of seed, as the present market prices of the onions themselves are so high that growers seem to prefer, in many cases, to sell their seed stocks of the onion bulbs rather than run the many uncertainties of obtaining even a fair crop of seed. As at the present time yellow and red varieties are worth \$2 to \$2.50 per barrel, and white sorts \$4.50 to \$5, there would therefore seem to be no immediate expectations of very much lower prices for onion seed.

As regards the distribution of free seeds by the Government, it is earnestly hoped by the entire seed trade that the agitation against the practice will be so strong and well-directed the coming year, that an end may be put to this continued pernicious interference with the legitimate seed business. For the present, at least, fire has put a stop to the output of this industry, as last Wednesday the five-story building in Washington, D. C., where the seeds are prepared, was with its contents completely destroyed. The loss is reported as something less than \$100,000 and is fully covered by insurance. Let us hope this plant will never grow again.

The few reports that have come to hand this week as regards sweet corn, amply confirm our previous apprehensions of a very short crop. It turns out to be practically a crop failure as regards the late varieties. One sale of a little Stowell's Evergreen this week at \$7 per bushel will show how the wind blows.

WIETOR BROS.

CHICAGO

THE LARGEST GROWERS OF CHRYSANTHEMUMS IN AMERICA

And this year our List of Varieties and Quality of Stock was never surpassed. As to Quantity, our crop is estimated at 125,000 High Grade Blooms. All Colors. Prices Right.

We had plenty of Early. We have Plenty of Mid-Season. We shall have Plenty of Late.

Chrysanthemum Stock Plants Now Ready

Our Stock of Roses and Carnations is fully up to its usual Standard of Perfection.

WIETOR BROS. No. 51 Wabash Ave. CHICAGO

European Notes.

This column was left vacant last week in the hope that it might be possible to send some more cheering news, but our hopes are thus far doomed to disappointment and the work of preparing goods for shipment is still attended with the greatest difficulties.

Our sunshine record for October is 91 hours and the rainfall nearly three inches. We are at any rate free from any danger of a water famine for some months to come.

Of our seed crops some lots of mangel and late radish are still in the fields; the latter will not possibly be available for the coming season's trade.

Between the storms we have threshed some of our early radishes and the results are most disappointing. The blight which struck most of our crops has spoiled the sample and reduced the yield fully 30 per cent. This will still further discourage the growers, and as the wheat and grain trade is still booming our seed growers have all turned farmers.

The situation in the clover seed market is still as last reported. The Lucerne growers in Provence are wondering if they are ever going to see the sun again, while the farmers in England are kicking themselves for not cutting their clover hay in September instead of leaving it for a chance crop of seed. It is practically useless for other purpose now.

The later crop of dwarf French beans in Italy is proving much better than anticipated, but as they are not yet harvested and storms and floods have joined with earthquakes to devastate that favored region there may yet be a "slip 'twixt the cup, etc."

Archibald Smith, formerly of Boston, Mass., has had a serious fall and broken his left arm and damaged a rib. He is making good progress.

G. H. Dicks has arrived per S. S. Lusitania on her record run.

Alfred Legerton, wholesale seedsman in Oldgate, London, has had to call a meeting of creditors. Depreciation in the value of real estate is said to be the cause of the failure.

EUROPEAN SEEDS.

ADVERTISING in THE FLORISTS' EXCHANGE not only pays, but is far reaching. Messrs. R. Vincent, Jr. & Sons Co., of White Marsh, Md., this week showed us an order for geraniums received from a grower in Tokio, Japan, crediting the order to their advertisement in THE FLORISTS' EXCHANGE.

To have geraniums reach far-off Japan in good condition is somewhat of a proposition, but the Vincents, with their large experience in packing, expect to be able to deliver the goods in good shape for growing on.

NURSERY DEPARTMENT.

Conducted by Joseph Meehan.

AMERICAN ASSOCIATION OF NURSERYMEN.

J. W. Hill, Des Moines, Ia., president; C. M. Hobbs, Bridgeport, Ind., vice-president; George C. Seager, Rochester, N. Y., secretary; C. L. Yates, Rochester, N. Y., treasurer.

Magnolia Soulangeana.

Will the seedlings of *Magnolia Soulangeana* come true? When should the seeds be planted and what treatment do they require before planting?

SUBSCRIBER.

—Seedlings of *Magnolia Soulangeana* cannot be depended on to come exactly true, but they are so nearly so that selling them as *Soulangeana* is practicable. Some may be a little lighter, some a trifle differing in size and in other ways not just the same.

Wash the pulp from the seeds now, then place them in damp sand in a cool place until Spring. If you have a greenhouse, sow them in February; otherwise, sow them outdoors in Spring, as soon as the weather permits.

J. M.

Camphor Production in the United States.

The Agricultural News, of Barbados, West Indies, has this to say of camphor production in the United States.

"The experimental work toward the production of camphor that is being carried out in the United States was recently described by Mr. James Wilson of the Department of Agriculture. Through the Department, camphor seeds have been distributed for years past, and trees are growing in large numbers throughout the Southern and Western States. A large manufacturing concern, which uses camphor to the value of \$500,000 every year, is building up a camphor grove of 2,000 acres in Florida, from which it hopes later to derive a good supply. It is stated that satisfactory results have attended the preliminary trials which have already been made in the extraction of the camphor."

There is no apparent reason why camphor trees would not thrive in many of our most Southern States, but the extract from the Agricultural News makes a mistake, or some one does, in saying the trees are growing in large numbers in the Western States. The tree will not grow in any Western State, nor in any other one where more than 10 to 15 degrees of frost occurs; and it might not endure that much cold with a dry air about it. It is not hurt by such cold when near the sea coast, as it endures it along the south coast of England at times; but even many Australian trees flourish there, the temperature of the sea and the moist air rendering that possible.

Our country is such a large one, embracing all kinds of climate and soils, that but few plants could be named that would not be at home in some part of it.

Usefulness of the *Berberis Thunbergii*.

One of the useful shrubs of which nurserymen cannot have too large a stock is the Japanese barberry, *Berberis Thunbergii*. This has been recognized since the time of its first introduction by those who took notice of the shrub and saw its many merits. Its small yellow flowers in Spring are pretty; its foliage, which follows, is neat and ornamental, and in Midsummer its scarlet berries ornament it from that period all through the Winter until the next Spring. This persistency is a most valuable quality. There are many other shrubs that hold their berries until Winter's frosts come, but how very, very few of them are in good condition afterward. Another treat this barberry gives us is its lovely foliage in the last days of Autumn. These notes are being penned November 9, and to see these barberry plants at this time is a treat indeed. Single plants are beautiful, but a hedge of them is a glorious sight just now. The color of the foliage may be called an orange red, but it varies day by day as the season advances and until the end comes.

As an ornamental hedge alone the plant is unsurpassed, but it must not be forgotten that it is a plant to use for a defensive hedge as well. Its prickles are not large, but they are very penetrating and as the natural growth is of a bushy nature a good hedge of it is one that no human trespasser wants to push through a second time after a first trial.

Nurserymen and florists can safely recommend this barberry to every one wanting a pretty, neat shrub or an ornamental hedge; and to get a stock of it procure the seeds now or before the ground freezes to prevent sowing. Wash the pulp off the seeds and sow at once. If prevented from sowing now, keep the seeds in damp sand in a cool place all Winter—outdoors if preferred—and sow them early in Spring.

All barberry seeds should be treated in the same way; in fact, there are but few deciduous tree and shrub seeds that do not come under the same rule.

Preparing Ground for Seeds.

This season proves such a late one for the ripening of seeds that it is likely to find the ground frozen up before many sorts, that should be sown in Autumn, are secured. At this writing, October 25, in this vicinity, Norway maple and many similar seeds are still on the trees, although several white frosts have occurred and the mercury has verged on 32 degrees once or twice. This state of affairs need not greatly trouble those who wish to sow seeds and who can get them within a few weeks. Make the ground all ready for the sowing, and have a heap of sand, or sandy soil, ready near by. Then when the seed comes, sow it, even though the ground be frozen, and cover the seeds with sand. Sown in this way the result will be just as good as if done earlier, as a few weeks' time, more or less, makes no difference with Fall sown seeds.

Maples, ash, birch, and the most of the stone fruits, must either be sown in Autumn or else kept in damp sand all Winter. Sometimes it is more convenient to keep them under cover until Spring,

ting, these varieties especially: obtusa compacta, obtusa nana, pisifera, pisifera aurea, plumosa, plumosa aurea, Rosedale and squarrosa. The blue color of squarrosa recommends it, but it is not always possible to have shapely plants of it unless they have been under the knife a year or so beforehand. The junipers offer something in the pyramidal line, the Irish, Swedish, stricta and virginiana, all representing this type, and they well fit in corners and other places where height with little spread is required.

In the spruce line the white, the hemlock and the Norway are the three most useful; the oriental could be named but it is expensive, comparatively, and really many Norways look like it. White spruce is a handsome evergreen when young, compact and shapely; so are the Norway and the hemlock. The spreading habit of the hemlock fits it for standing alone when such a plant is desired.

There are three pines well suited for pot uses, the white, Himalayan and Cembran, and it happens that all these transplant with more ease than most other sorts. And all have soft, silvery needles—the Cembran less soft than the others, still not so objectionably sharp-pointed as the Austrian, says.

Arbor vites offer a choice of several sorts, some quite pyramidal, others globe-shaped. The common one, occidentalis, is tall and slim, usually; so is its variety, George Peabody, the golden tinted one. The Chinese is good to use for variety's sake, and when a round-shaped one is desired fry pumila or Hoveyi.

Among miscellaneous evergreens of merit in this connection there can be admitted to the collection the Nordman fir, Lawson cypress, Irish yew, box bushes, Euonymus japonicus, Mahonia japonica and ivy bushes.

Where seasons permit of it these evergreens do best when potted a month in advance of Winter, potted well, and then placed in a sheltered, half-shaded position until the approach of hard weather makes it imperative to get them under cover. The greatest call for these pot evergreens comes for uses pertaining to Christmas, but not altogether, for hotels and similar institutions usually demand them as soon as Winter sets in making outside journeys less enjoyable than before.

These foliage plants, as they may be called, are sold in advance of Christmas to a great extent, after which those of a flowering nature come along, affording the florist and nurseryman an opportunity to dispose of most of his evergreens before the rush of Christmas work commences.

Camphora officinalis (Camphor Tree) Growing at Pomona, Cal.

but all who have to do with outdoor work in Spring know how they are rushed then and how pleased they are when they find much of the work was done in the Fall.

In the case of nut seeds that vermin are fond of, it is as well to preserve the seeds, under cover, for Spring sowing; but with other seeds it is a great help toward getting through with the Spring rush to sow them in the Autumn.

Evergreens for Pots.

The desire to have living plants in the house in the Winter season is possessed by everyone, even the poorest dwelling usually having a representative of some plant in the window. Florists and nurserymen who come in contact with lovers of plants more perhaps than any other body of people find a growing desire for Winter plants, more often for such sorts as have merits of foliage than those of a flowering nature. Perhaps hardy evergreens lead all other kinds. Palms, of course, as well as many other greenhouse plants, have their share of calls, but the evergreen being hardy can fill positions other plants cannot, in hallways and even outdoors, hence the great demand for these plants.

The size of plants most available for potting are those of from two to three feet. This size can be got into pots of 12-inch diameter and less, a size admitting of easy handling and yet affording sufficient soil to maintain the plants.

The various retinisporas are well adapted for pot-

Propagating the Verbena Shrub.

Those who have grown the verbena shrub, *Caryopteris mastacanthus*, know how difficult it is to keep it in good condition when outdoors all Winter. The difficulty is partly due to its natural half-shrubby character, and partly to its lack of great hardiness. It is such a beautiful shrub in late Autumn that it is well worth preserving over Winter. Its flowers are light blue, coming in clusters, in October, when but few shrubs are in bloom, and no others of the same color, unless it may be those of a blue althæa, are visible then.

An easy way of preserving it and of getting up a good stock of it is to keep a few plants in pots. Just a few will suffice. These plants should be placed in heat early, say in February. They start to grow quickly, and as soon as proper length of growth is attained cuttings should be made. These root readily, and are soon tall enough to yield their tops as cuttings, so that in a very short time there is a nice lot of plants on hand. These small plants will be stocky by the time planting out is in order, and they are just the kind that will give a fine show of flowers in the Autumn. Small plants in 3-inch pots make a nice display of flowers in Autumn, if the season be at all favorable for growth.

JOSEPH MEEHAN.

Plant Notes Geraniums.

No matter what resolutions growers make annually, or oftener, the great majority of them, when propagating geraniums by whatever method pursued, insert the cuttings too closely together both in the rows and the rows to each other. The consequence of that is, that very often quite a large percentage of the cuttings never attain the salable plant stage. When cuttings are thus inserted too closely, they require much more labor expended on them in the way of cleaning than if there had been more space allowed for each cutting. Geranium cuttings in flats need very little water after the one thorough watering they have had, or ought to have had, when put in, until they are rooted, and even then, only when it is absolutely necessary. When it becomes apparent that water is required, it should be given in such quantities that all the sand, or soil and sand, as well as all the roots will get an abundant supply; and no water should again be given until on investigation it is found that they are in the condition they were previous to the last application. All dead and decaying leaves should be picked off the plants, as well as off the soil or sand in which the plants or cuttings are placed.

D. M.

Newport, R. I.

News and Trade Notes.

On Tuesday, November 4, the plants and greenhouse property of the J. M. Hodgson Company were disposed of at auction. The sale drew a fairly large number of buyers including several representatives of New York florists. Everyone who attended did so in the expectation of securing bargains, and if they all did not succeed it was not because of the prices ruling; from beginning to end, everything went at ridiculously low figures even considering the condition of the stock. Palms, large and small, sold for less, in many cases, than the actual value of the pots and tubs. The sale of plants, fixtures, etc., did not realize \$1000—a figure much less than the appraised value. The real estate, which includes all the greenhouses and a dwelling house, was knocked down to Mr. Spalding for a little over \$11,000, which also was an astonishingly low figure, especially when it is considered that the property is located on a corner on Bellevue avenue.

The newly organized firm of Spalding & Hodgson will, it is understood, put the greenhouses in good condition and restock them with plants for business next year. Leikens was one of the largest buyers of palms at the sale; large numbers of those he bought were shipped to New York for immediate service, the remainder he is storing with Oscar Schultz for the winter.

F. L. Zeigler, after purchasing several large lots of palms and miscellaneous plants at the Hodgson sale, found it impossible to keep them until he could dispose of them in the regular course of his business; he therefore resolved to offer them again at auction on the public square, selling them in very small lots, with the result that he more than doubled in returns, for less than half the number he purchased, the amount he paid for the whole.

Arthur Griffin is back from England looking in tip-top condition of mind and body; he enjoyed his trip immensely.

D. M.

More Than Pleased

Joliet, Ill., Oct. 18, 1907.

We have your favor of the 16th, and would say that we are more than pleased with the results obtained through advertising in your valued paper and herewith enclose you new contract for this season.

Thanking you for your many kind favors.

Indianapolis, Ind.

Current Topics.

Tomlinson Hall market reports the slowest business in many weeks.

Ben Pritchard, Homer Weigand, Clarence Thomas and Irwin Bernemann have returned from the Chicago exhibition; the improvement shown in roses at that exhibition brought forth much comment. The abundance of fine stock available for the Chicago retailers is, no doubt, better than can be found in any other American market.

Alvin Schrieber, who has been on the sick list, is once more attending to business.

August Grande seems to have a corner on the chrysanthemum plant market this season.

Gude Brothers, Washington, D. C., en route to Chicago, visited this city last week. E. G. Hill, August F. Beyer, South Bend, Ind., and James P. Keller, were also with us.

I. B.

OPEN YOUR EYES

PREPARE FOR
THANKSGIVING
and the Holidays

Watch Prosperity Look

Election is now over. Money stringencies are of the past, the country settled and the outlook is good. The wise florist knows that a dollar invested in a good stock of plants is safe and brings more returns than one hundred dollars invested in banks, which are unsafe.

Great prosperity is in sight. Everybody wants to invest their money. Why not you? Don't consider long. A little fortune lies before your door. Grab it quick while the market is low and while there is a chance for you. Waiting means suicide.

LOOK!

We have Araucarias to beat the band. Why? Because we are specialists in importing, growing and shipping Araucaria excelsa, robusta, compacta and glauca for the last fifteen years from the Atlantic to the Pacific ocean, Cuba, Canada and Mexico. Our Araucarias go and are well known everywhere.

Where do you think you will buy them for the holidays? From a man who imports a few hundred, or from a specialist who imports them yearly in numbers of 10,000? Surely from a man who can give you bargains.

FIFTY CASES of plants just arrived per steamer Manitau from Belgium, October 27. Amongst them are several thousand Araucaria excelsa in smaller sizes, fine bushy little plants, which we offer at a bargain. 3 tiers, 5 in. pots, only 40c.

Last Spring's Importation

ARAUCAARIA EXCELSA, 3 year old, 6 1/2 to 6 3/4 in. pots, 10-12-14 in. high, 3 tiers, 50c.

ARAUCAARIA EXCELSA, 3 year old, 6 1/2 in. pots, 16-16-17 in. high, 3-4 tiers, 60c.

ARAUCAARIA EXCELSA, 4 year old, 6 in. pots, 20-22 in. high, 4-5 tiers, 75c.

ARAUCAARIA EXCELSA, 5 year old, 6 in. pots, 22-25 in. high, 5 tiers, \$1.00.

ARAUCAARIA EXCELSA, Specimen plants, 6-7 in. pots, \$1.25-\$1.50 each.

ARAUCAARIA EXCELSA GLAUCA. This variety, on account of its beautiful bluish foliage, dwarf habit and fine compact shape gives it a striking appearance. Anybody seeing them must undoubtedly fall in love with them at sight. They are all in the finest shape you ever saw. 4 year old, 6 in. pots, 16 in. high, same in width, 3-4 tiers, \$1.25. 4 year old, 6 in. pots, 17 to 23 in. high, same in width, 4 tiers, \$1.50 to \$1.75. 5 year old, 7 in. pots, 25-30 in. high, same in width, 4 tiers, \$2.00. 5 year old, 7 in. pots, 30 to 36 in. high, same in width, 4 tiers, \$2.50. 5 year old, 7-8 in. specimen plants, \$3.00-\$4.00.

ARAUCAARIA ROBUSTA COMPACTA. This is the King of the Araucaria Family. It is of a beautiful green, fine in shape (width), compact habit, and highly admired by everyone. I have a house full of them; can meet all wants. 4 year old, 6 in. pots, 22-25 in. high, same in width, 4 tiers, \$1.50-\$1.75. 4 year old, 6-7 in. pots, 25-30 in. high, same in width, 4 tiers, \$2.00-\$2.50. 5 year old, 7 in. pots, 30 in. and above, 4-5 tiers, specimen plants, \$3.00-\$3.50.

LANTANIA Borbonica, 25c. each.

KENTIA Forsteriana and Belmoreana. 6 in. pots, 5 to 6 leaves, about 25 inches high \$1.00, 6 1/2 and 6 in. pots, 5 leaves, 20 to 25 inches high 75c., 5 to 6 1/2 in. pots, 5 to 6 leaves, strong bushy plants, 50c. to 60c., 4 in. 18 to 20 inches high 35c. each.

COCOS Weddelliana, 3 in. pots, 10-12-15 in. high, 16c.

ARECA Lutescens, 4 in. pots made up, three plants in a pot, 18-20-22 inch high 20c. each.

FICUS ELASTICA or RUBBER PLANTS, home grown and Belgium stock, 5-6 1/2 to 6 in. pots, 25c.-35c.-40c.-60c. and 60c. each; 7 in. pots, 75c.; 8 in. pots, \$1.25 to \$1.50.

FERNS Boston, 4 in. 20c., 5 in. 35c., 6 in. 50c. each, 7 in. \$75c. to \$1.00 each. Elegantisima, 4 in. 25c., 6 in. 50c., each; 7 in. pots, 75c.; 8 in. pots, \$1.25 to \$1.50.

Whitman, 6 in. single plants, strong, 50c., 75c., \$1.00 each; 7 in. as big as a bushel basket, made up 3 plants in a pot, \$1.25 to \$1.50 each.

Pieris 4 in. 20c. to 25c., 6 in. 50c. each.

Scotti, 4 in. 20c. to 25c., 6 in. 50c., 6 and 5 1/2 in. 35c. and 40c., 7 in. very heavy 75c. to \$1.00 each.

Ferns for Disches. A large assortment in 2 1/2 in. pots, \$5.00 per 100.

ADIANTUM Hybridum, the best adiantum for cut purposes, large plants in 6 in. pots, 30c., 35c. and 40c. each.

ASPARAGUS plumosus annuus, 3 in. pots, \$6.00 to \$7.00 per 100; 4 in. \$10.00 per 100; all bushy plants.

CYCAS REVOLUTA (Sago Palm), plants from 5 to 15 leaves 10c. per leaf.

PRIMULA OBCONICA, in bud and bloom, best strain, 3 in. \$7.00 per 100; 4 in. \$10.00 per 100. 5 1/2 in. \$2.00 per dozen.

CHINESE PRIMROSES, Jno. F. Rupp strain, 5 in. \$2.00 per dozen.

HYDRANGEA OTAKSA, pot grown, 6 in. to 7 in., 25c., 35c. to 60c. each.

BEGONIA, Gloire de Lorraine, 6 in., 60c., 75c., and \$1.00 each. Also new improved Erford, 4 in., strong, 20c., and B. Flambeau, sells at sight, 6 1/2 in. 25c. each; 4 in., 35c.; 3 in., 25c.; 2 1/2 in., 20c., in bloom and bud.

SOLANUM (Jerusalem Cherries) full of berries 6 in. and 7 in. pots, 25c., 30c., 40c., and 50c. each.

DRACENA BRUANTI, 6 in., full of leaves from bottom to top, 24 in. high, 40c. each.

AZALEA INDICA, 6000 just arrived from Belgium, grown under contract for us, and never in my life have I received them in such a good condition as this time—well budded and with all their foliage on them. Have only well-known leading varieties, such as Deutsche Perle, Simon Mardner, Veruca, Apollo, Mme. Von der Cruyssen, Empress of India, and a few early varieties that can be forced for Christmas.

Prof. Wolters, Bernard Andrew Allen, Nobe, John Lively, Talisman, etc., price, 40c., 60c., 60c., 75c., \$1.00, \$1.25, \$1.50, \$1.75 to \$2.00 each.

Iowa State College, Dept. of Horticulture and Forestry.

Ames, Ia., October 24, 1907.

Mr. Godfrey Aschmann, 1012 West Ontario St., Philadelphia, Pa.

My dear Sir: The shipment of plants recently ordered from you came to hand in good condition. Kindly accept our thanks for your prompt attention.

Yours very truly,

A. T. ERVIN, Associate Professor.

Oakmont, Pa., October 22, 1907.

Mr. Godfrey Aschmann, 1012 Ontario Street., Philadelphia, Pa.

Dear Sir: I have not had time to write you since I received the plants on the 12th ult. I must state I am well pleased with them; they are fine and doing nicely. Thanking you very kindly for sending such nice plants. Very respectfully,

R. H. NIEL, florist.

Please mention if plants are to be shipped with or without pots. All goods must travel at purchaser's risk. Cash with order, please.

GODFREY ASCHMANN

Importer, Wholesale Grower and Shipper of Pot Plants
1012 West Ontario Street, PHILADELPHIA, PA.

Parlor Plant Tubs, Florists' Cut Flower Vases, Pot Saucers and Rolling Stands

The Handsomest, Strongest, Most Serviceable, and Most Economical Florists' Furniture made.

WE carry a full line of Plant Tubs, Saucers, and Rolling Stands; also Vases for cut flowers.

These are all made of Indurated Fibre, the best material known for this service. Moisture-proof, practically unbreakable and of rich and striking appearance. Vastly superior to wood or earthenware and much more economical.

Prices very low. Ask your jobber or ask us.

Philadelphia. Show Notes:

The following prizes were awarded on Wednesday, November 13, 1907.
American Beauty, one vase of twelve blooms, offered by Mrs. George D. Widener, Ashbourne, Pa.—two prizes: First, Mr. P. A. B. Widener (Wm. Kleinheinz, gardener); second, Mrs. W. L. Elkins, John Hedlund, gardener.
Best American seedling carnation, never disseminated, twenty-five blooms for the "Craig Prize," a silver cup, offered by Robert Craig, Esq., Philadelphia. Won by Dailledouze Bros., Flatbush, N. Y., with Afterglow.
Best vase of twenty-five blooms, pink carnation, any named variety, for the prizes offered by Mrs. George D. Widener, Ashbourne, Pa.—two prizes: First, Mr. P. A. B. Widener; second, Mr. C. B. Newbold.
Special awards were given as follows:
Silver medal awarded to Robert Scott & Son, Sharon Hill, Pa., for new hybrid tea rose Mrs. Jardine.
Silver medal awarded to E. G. Hill Company, Richmond, Ind., for new hybrid tea rose Princess.
Certificate of merit awarded to Mr. P. A. B. Widener, Ogontz, Pa., for new chrysanthemum "Lynnwood Hall."
D. R.

Forcing Ramblers and Hybrid Roses for Immediate Shipment

The right time to buy roses is when they are fresh and well ripened. Roses potted up in the fall or the winter become better established and force better, and are far more satisfactory in every way, and you can retard and force at your leisure. We recommend American-grown "Ramblers." Don't attempt to force imported Ramblers; the general experience is that they are a failure.

We offer exceptionally strong two-year-old dormant, low-budded stock (on Manetti), in the following varieties true to name:

Prices: 65c. for bundle 5, \$12 per 100, \$110 per 1,000, 25 at 100 rate, 250 at 1000 rate.

ANNE DE DIESBACH. Bright carmine.

BALL OF SNOW. Pure white.

BARON DE BONSTETTIN. Dark crimson shaded.

BARONESS ROTHSCHILD. Satiny pink; extra.

CAPTAIN CHRISTY. Delicate flesh-color.

DUKE OF EDINBURGH. Bright vermilion; fine.

FISHER HOLMES. Dark rich scarlet.

FRAU KARL DRUSCHKI. The finest white in existence.

GENERAL JACQUEMINOT. Rich velvety crimson.

GENERAL WASHINGTON. Beautiful red, shaded carmine.

JOHN HOPPER. Beautiful rose pink.

LA FRANCE. The finest light pink.

MARGARET DICKSON. White, pale flesh center.

MAGNA CHARTA. Clear rosy pink.

MME. GABRIEL LUIZET. Light, satiny pink.

MME. PLANTIER. White.

MRS. JOHN LAING. Soft pink; most desirable variety.

PAUL NEYRON. Beautiful dark pink.

PRINCE CAMILLE DE ROHAN. Velvety crimson.

ULRICH BRUNNER. Cherry-red.

AMERICAN GROWN CRIMSON RAMBLERS

The only stock for forcing.

Large plants, 2 to 3 feet, \$1.25 for 10, \$12.00 per 100.

Large heavy plants, two years old, 3 to 5 feet, \$1.75 for 10, \$15 per 100.

Extra heavy plants, 4 to 6 feet, \$2.00 for 10, \$18.00 per 100.

THE BABY RAMBLER

MME. NORBERT LEVAVASSEUR. Strong field-grown plants, \$1.25 for 10, \$12.00 per 100.

THE NEW BABY RAMBLER ROSE

CATHERINE ZEIMET. A very important novelty. A white Baby Rambler rose, larger and better flowers than the type. White with yellowish center. An important fact is that it has the true rose perfume in a high degree. One of the best polyantha types to date, fine forcer. 50c. each, \$5 per doz., \$10 per 100. Extra heavy 75c. each, \$7.50 per doz., \$60 per 100.

THE TREE BABY RAMBLER

Grown as a standard.

The popularity of the Baby Rambler has suggested the growing of it as a tree or standard. The variety is too well known for description; enough to say, it retains all its characteristics of free blooming qualities, etc. 35c. each, \$3.50 per doz., \$25 per 100.

DEUTZIA

GRACILIS. Pot-grown for forcing, \$2 per doz., \$15 per 100.

LEMOINEI. Pot-grown for forcing, \$2.50 per doz., \$18 per 100.

NEW BABY DOROTHY ROSE

The greatest pot rose for florists extant. A superb forcing variety. We have proved it. Color a deep pink. Price, \$3.50 per 10; \$30.00 per 100.

WHITE BABY RAMBLER (Catherine Zeimet), with double white perfect flowers; fragrant; a good forcer, \$3.50 per 10; \$30.00 per 100.

PINK BABY RAMBLER (Anny Muller), a perfect bedding rose; as such there is nothing to equal it. Its color is charming. \$3.00 per 10; \$25.00 per 100. Above all in field-grown plants.

JOHN CHARLTON & SONS, University Ave. Nurseries, Rochester, N. Y.

Your paper has been a great help to us in many ways, and we do not care to be without it.
New York, L. J. Bates.

THE WEEK'S WORK

Timme's Timely Teachings

The Lilies.

From the time the bulbs are potted up until the finished plants or flowers are ready for marketing it is necessary to observe closely the behavior of lilies as they pass through their successive stages of growth. This becomes all the more needful when a closely timed course must be held to in an effort to bring up in due season at a finishing point which marks one of the grower's golden opportunities for seeing himself most liberally repaid for his labors. Lilies, although probably the most exacting in their requirements of all bulbous plants under indoor culture, are by no means to be classed among florists' stock especially difficult to grow. But success with lilies depends so much on being watchful, cautious and prompt in administering to their needs, that they often prove a source of constant doubt and worry to the overanxious grower. Where lily culture proves a disappointing venture it may safely be laid to more than one cause, usually not any of them clearly apparent or easily to be pointed at with unerring finger.

The insidious disease peculiar to all classes of lilies chiefly raised for indoor forcing is the fundamental cause of most of the trouble experienced in their culture. This preternaturally side-tracked—if such were possible—would leave the road to success with lilies fairly clear of insurmountable obstacles, and the difficulties met with would not be greater than those to be overcome in other cultures of importance attempted by good growers. A start made with well-ripened, strictly sound and healthy bulbs leaves timely planting, careful watering, the allowance of time to form roots before being brought into heat, cleanliness and steady pace in forcing as the chief essentials to be observed in lily culture, and more apt to bring good results when luck favored the grower in making such a start.

Lilies Under Early Forcing.

Bulbs of the true Harrisii type, started in August or early September, brought into moderate heat when root formation was found to be well under way and now nearing their finishing mark, will prove to be good property in the hands of grower and dealer from the end of November until well into the beginning of the New Year. The fact of their being a most uneven lot as to height and headway in growth made up to date is no matter for regret, as this enables the retail grower to meet the never lagging demand for potted and cut lilies throughout this period—a line of trade worth caring for. Very little in the way of clear profit will be missed by not having the entire lot of early lilies come in at Christmas, but having the means for ready supply, strung out all along the line of moderately good but constant demand.

Lilies to be right for Christmas and New Year must now show clearly defined buds well above the terminal foliage. In a temperature of from 60 to 65 degrees until flowers open and most of the buds have turned from green to white, these lilies will be in good trim for the holidays, with time to spare for a final hardening off in cooler quarters previous to being sold. A higher temperature is required for those more behind in growth, if wanted principally for the holiday trade. It is always well, and simplifies matters greatly, to assort lilies under forcing into several grades according to advancement in growth and to keep the lots by themselves. A shifting about of the more backward of these lots to warmer quarters becomes necessary, sometimes a removal

al to another house. In making sure of the right degree of heat to be employed day or night, it is never safe to rely on the readings of a thermometer hanging on the other end of the house. The cost of these instruments is so little as to make one wonder why they are so sparingly made use of on numerous places where best results in the cultivation of plants is aimed at.

If it is in any way possible to maintain an absolutely steady temperature and to manage ventilation so that no direct currents of cool air ever strike the lilies, the bother with greenfly will not be so great as to necessitate strong or over-frequent fumigation, especially not when flowers are beginning to expand. So-called burned edges and tips of leaves, greatly marring the beauty of lilies, palms and many other plants, are more often caused by careless watering than the scalding by tobacco fumes. Over-watering also causes the decay of roots, and if not this, at least interferes with their action to such an extent as to put a halt to healthy and perfect top growth, and often is the cue for lurking disease to put in its deadly work. Diseased lilies should be destroyed at once by the grower, without waiting for the disease to do it.

Lilies, it is true, may safely be subjected to hard forcing if deemed needful, but nicely adjusted heating arrangements—especially devised for the forcing of lilies and similar purposes—are not at the command of every lily grower. The retail grower, with his few hundreds of lilies in houses containing stock of quite a different nature—even if he were able to raise the temperature to an excessive height and keep it there—should take warning and rather forego Easter lilies at Christmas than to stay up nights scattering destruction broadcast. His lilies, even if not all coming right for the holiday business, will nevertheless turn out to have been a wisely made investment, as the early lilies always will when available in successive portions for a live home trade.

Lilies for Easter.

While lilies line up well with what florists may be able to put forth at Christmas—lilies being especially fine in decorating church, hall or fireside—their great value as holiday stock becomes most apparent at Easter. They then are the "top-liners," heading the list of most important plants, especially grown for the great Spring festival. Comparatively high prices rule on that occasion and are readily obtainable for the superbly finished product of the lily grower. In his exertions, therefore, to produce the best possible grade of stock in his line he never loses sight of what is of even greater importance, the exigency of having it in salable condition at the proper moment.

The bulbs of *Lilium longiflorum* are planted during the month of October and may even yet be planted and still be made to come right for Easter. Where thoroughly rotted manure is available, one part of it to two parts of partly decayed, turfy sod soil, well intermixed and prepared some time beforehand, forms a suitable compost for this variety of lily. Fresh manure should never be a part of the soil used in potting up lily bulbs, and where the right kind cannot be had it is better to use the loam alone, depending on liquid feeding later on when the plants are beginning to make healthy, rapid growth. The placing of anything that will insure perfect drainage in the bottom of the pots has its merits, and is by no means one of those little details that fail to show a difference in results whether omitted or not.

To start the bulbs in small pots and to transplant into larger ones when roots are showing is a good plan, provided the midway shift takes place before root formation has advanced to a point when serious disturbance of outlying fibers through the operation can hardly be avoided. I have found that this method of starting lilies, if rightly practiced, shows advantages which dispel possible doubts as to an extra day's labor in repotting being well spent. Along the fact that thereby the danger from over-watering newly planted or insufficiently rooted bulbs is greatly alleviated must prove it to be a safe and good course to follow,

especially by those not yet sure-handed enough to avoid serious mistakes right at the beginning.

And again, if to be right in starting means anything at all, it would also seem worth while to inquire into the merits of deep planting as against slight or but partial covering of bulbs with soil in potting. Two inches or more of soil above the bulb enables the stem of the top growth to form roots at its foot in addition to those already made at the base of the bulb. This is nature's way of growing lilies of such kinds as those used for winter forcing by florists. A double set of feeding roots is thus furnished, an annual and a perennial set, one above, the other below the bulb. Cleaning and preparing the bulbs for shipment necessitates the removal of all roots, those then dry and dead after having fulfilled their mission in directly nourishing the flowering stalk, as well as those ever alive and necessary for the well-being of the bulb. In planting these lily bulbs in pots it becomes the grower's first duty to coax forth a new set of roots to keep the bulb alive, though he may not see it in that light; still this is all he actually does. But in keeping them alive he also preserves their inherent energy, which in due season will exert itself in renewed action. In planting shallow he overlooks the possible need of reinforcement in upholding vigor of active growth, and is compelled to depend on bulb and first roots alone as the only source of nutriment for a top growth seemingly requiring twice the amount thus furnished.

I have for years grown good stock from shallow planted bulbs, but have also given deep planting a good trial and in comparing results have found that deeply potted bulbs, though not bringing more or larger flowers, produce a stouter, longer stalk, that the actual loss by disease was much smaller, but that in forcing under same degree of heat they proved slower in coming into bloom than those planted high in the pots, the difference amounting to over a week. Lily specialists, more conveniently enabled for thorough tests in this direction, would probably obtain results more sweepingly in favor of deep planting. The trial involves no extra expenditure of whatever kind.

After Treatment.

Easter lilies, potted up, watered, placed in frames, given a top covering of clean soil, sand or ashes, and properly seen to as to their needs as regards sufficient moisture and protection against too low a temperature, should be well supplied with roots by the middle or end of December. The week between Christmas and New Year, when the holiday rush is well over and has left us time and room, is when we bring in our lilies, having a place ready for them in a cool house. After ten or twelve days, a separating into lots of uniformly advanced growth takes place, all of them now being in need of more heat and moisture, a temperature of 60 degrees usually suiting the greater portion of the stock. From now on fumigation is regularly attended to, and occasionally supplemented by using nicotine in liquid form where smoke proves ineffectual in keeping the plants free of greenfly, as in the crown of the foliage.

Those lilies that by the end of February have pushed their buds clear above the foliage may be depended upon as coming right for Easter in a temperature not higher than 60 degrees in daytime with a few degrees lower at night. By the first days in April they will be in a condition to benefit by a removal to a much cooler house, will there finish up and be excellent stock for the Easter trade of 1908. Marisii lilies intended for Easter require less heat in forcing out bloom in time than do those of the longiflorum type, whether Bermuda or Japan grown. *Lilium l. multiflorum*, coming in small but usually well ripened, firm bulbs, responds most readily to nicely timed forcing.

A greater heat will be necessary for those lots that are slow in growth, or, if not behind in this, fail to show buds at the specified time. There is little need, however, especially not this season, for excessively high temperatures in bringing all lilies in line for Easter, unless the number of laggards is large enough or some of the late planted lots

need pushing to justify extreme measures. Any appreciable rise in heat, after the mark of 65 degrees has been steadily held to for several weeks, does much more in promoting rapid growth than any similar upward move before this point was reached, and I seldom find it necessary in the forcing of a tolerably even lot of lilies grown for Easter to go above the 75 mark. In the case of *Lilium candidum*, now also largely grown for the early Spring and Easter sales, hard forcing proves harmful and also needless since the bulbs of this kind are among the first to ripen, and are obtainable in good season for very early planting. They do best and will be less liable to be attacked by disape or the inevitable aphids when slowly grown and bloomed in a carnation house.

Lilies for the Summer.

The bulbs of such kinds as *Lilium speciosum*, *excelsum*, *Brownii*, *superbum*, *auratum* and many others ripen up quite late and can therefore only be had from about now until nearly the end of next month, after which they are supplied from cold storage rooms. All these are good stock for the professional florist, more particularly when grown in pots and slowly forced into bloom than when planted in the open border. There are three distinct varieties of *Lilium speciosum*, all fine either for cutting or the trade in potted lilies, and if the grower confines himself to this species alone, he misses little, as far as profits go, in not being stocked up in lilies more completely.

Planted up quite late in the Summer, the bulbs—held over in cold storage—may easily be forced into bloom for Christmas in a temperature of not higher than 55 or at the most 60 degrees. But the best use we can put them to is to have them come in gradual succession throughout the entire Summer when well-grown lilies of this kind are most serviceable and the call for them, as well as the prices obtainable, encouragingly good for the grower. Essential points in their culture are firm potting in a rather heavy and liberally enriched compost, care in watering, cool quarters and an abundance of air and light when making rapid growth until buds open up, when a light shading on sunny days becomes necessary. FRED W. TIMME.

Chrysanthemum Society of America.

The records do not show that any great enthusiasm was manifested in the annual meeting held last week by the Chrysanthemum Society of America in New York; that, too, notwithstanding the fine exhibition, and accompanying large attendance, brought to the metropolis through the efforts of the organization in question. This is much to be regretted. The C. S. A. is doing splendid work on behalf of all who cultivate the flower it champions, and the lack of interest so generally apparent throughout the country, in the society and what it stands for, is but poor recompense for the unselfish endeavor of the men composing it, and, to say the least, is anything but stimulative or encouraging. A total membership of 80 is far from being representative of the aggregate number of individuals engaged in the culture of the chrysanthemum in the United States, all of whom are direct beneficiaries of the society and its efforts. We should much like to see this very unsatisfactory condition improved, and we urge a greater support of the organization by all concerned than now obtains. Excellent as is the work the C. S. A. is performing under present adverse circumstances, it is but natural to suppose that, given the proper support and encouragement to which it is deservedly entitled, still greater benefits would result from its operations.

President Loveless in his address recommends the affiliation of other horticultural societies, interested in the chrysanthemum, with the C. S. A., each of these auxiliaries "paying the national society an amount to be determined by the membership of each individual society, pro rata." This is right in line with what has been done so successfully in the case of the National Sweet Pea Society of England, as

was pointed out by M. B. Faxon on page 401, issue of The Florists' Exchange for September 21, 1907. The scheme of affiliation of the English organization referred to is as follows: "Societies subscribing \$2.50 per annum are entitled to one of the National Sweet Pea Society's silver medals, to be offered as a prize for sweet peas only, also to one copy each of the society's annual and other publications; to one ticket of admission to the society's London (principal) exhibition; and to nominate one of its members to represent it at the annual and other general meetings of the society."

A committee of the C. S. A. has been appointed to consider this matter of affiliation, and we respectfully submit the foregoing for their information, fully believing that some such plan as outlined, suitable to the exigencies of the C. S. A., could successfully be put in operation by it. Each contributing society would, if the system referred to be adopted, be receiving a partial return for its monetary contribution to the funds of the national society, in the form of a medal, from that organization, a factor that at once would conduce to the welfare of and interest in the respective affiliated associations, besides having the other benefits herein specified.

We are glad to observe that the C. S. A. is to broaden its scope, so as to devote some attention to the smaller flowered chrysanthemums, interest in which is yearly increasing. This is something that has been advocated for many years, but so far unsuccessfully. Writing in 1895 in The American Chrysanthemum Annual, Patrick O'Mara remarked as follows:

"Too much stress has been laid, I think, on the fitness or unfitness of certain varieties for cut flower purposes. The Chrysanthemum Society of America, being composed mainly of men who are growing the chrysanthemum for cut flowers, is prone to regard new varieties from one point of view only. This I regard as a mistake. Horticulture is broader than the cut flower market, and there is room without crowding for the cut flower varieties, the pompons, the anemones, the singles, the tasseled and all the other quaint forms. If, then, the committees of our Chrysanthemum Society cannot see merit in any variety unless it is of a stated size and shape, or without certain lines of color, they should state distinctly that they speak only from the standpoint of the cut flower grower. This would clear up a wrong impression which obtains in some quarters, viz., that they constitute the last court of appeal on everything connected with new varieties of chrysanthemums."

The sorts neglected heretofore by the C. S. A. seem now to be "coming into their own," so far as recognition by the national organization is concerned, all of which shows commendable sagacity on the part of those intrusted with the conduct of the society's affairs.

Another excellent suggestion made by President Loveless is to include in the annual report of the association accounts of the various chrysanthemum exhibitions held throughout the country, specifying and classifying the winning varieties in each case. This will, as the president said, form a valuable reference list, adding to the worth of the document. And it can be truthfully said, that no organization of the character of the C. S. A. can make its literature too comprehensive or informative. All this, of course, means added outlay, and the adoption by the society of these various proposed excellent features but strengthens the contention that greater financial support, through increased membership and otherwise, should be accorded the organization by those who are to profit most by its beneficent operations.

Work of Committees.

PHILADELPHIA, Pa., November 4.—No. 1, cream white, Japanese incurved; exhibited by Gordon Smirl, Rosemont, Pa. Scored 85 points commercial and 85 points exhibition scale.

No. 2, magenta, light reverse, Japanese incurved; exhibited by Gordon Smirl. Scored 79 points commercial and 81 points exhibition scale.

CINCINNATI, November 2.—Unnamed, reddish bronze, Japanese; exhibited by Nathan Smith & Son, Adrian, Mich. Scored 79 points exhibition scale.

Mary Donellan, yellow; exhibited by Nathan Smith & Son. Scored 83 points commercial and 87 points exhibition scale.

NEW YORK, November 6.—W. H. Moir, Japanese incurved; exhibited by C. H. Totty. Scored 92 points commercial and 94 points exhibition scale.

Lynnwood Hall, Japanese incurved; exhibited by Wm. Kleinheinz, Ogontz, Pa. Scored 86 points commercial scale.

CHICAGO, November 9.—Sadie May Stremmer, lemon yellow, sport of Queen; exhibited by Metcalfe Greenhouses, Hopkinsville, Ky. Scored 64 points commercial scale.

The variety No. 4 exhibited by Frank E. Witney before the New York committee has been named Grace Witney.

DAVID FRASER, Secretary.

CLUB AND SOCIETY DOINGS.

NEW YORK FLORISTS' CLUB.—The monthly meeting of the club held on Monday evening, November 11, 1907, was fairly well attended, President Totty occupying the chair. It was ladies' night, but only a small gathering of the fair sex put in an appearance on this occasion. C. Schaefer was elected a member. The nominating committee presented the following names as candidates for the various offices for the ensuing year: For president, C. H. Totty, C. B. Weathered and W. Duckham; vice-president, Henry Weston, W. A. Marshall and A. Jaenicke; treasurer, W. F. Sheridan, J. K. Allen and A. L. Miller; secretary, John Young, J. A. Shaw and S. S. Butterfield; trustees for three vacancies, E. V. Hallock, W. B. Darré, P. Wagner, C. Lenker, A. J. Guttman, A. M. Henshaw, A. Rickards and Robert Simpson.

Henry Saxton Adams of Wellesley, Mass., gave a very interesting talk on school gardens, touching upon the educational and industrial points of view of the movement, which he said had already passed its infancy and had become an important factor throughout the country. In Massachusetts there were already 350 school gardens under the auspices of the Massachusetts Horticultural Society. The movement began in 1880, and was instituted by H. Lincoln Clapp, who had been much impressed with the success of school gardening as carried out in Germany. Mr. Adams explained the difference between public and private school gardens; the latter took up the work where the former left it, and carried it on during vacation time and at other periods when the public school was inactive. He spoke enthusiastically of the influence of school gardens on the morale of the children, stating that the condition of the bad boy as well as the bad girl was considerably bettered by work of this character. The influence of the school garden also reached the home, and a general betterment of home surroundings was the result. The school garden had the effect of breeding in a child a respect for the property of others, and enriched its whole life. The speaker did not approve of the plan of giving away seeds to school children, being of opinion that they valued more that which they paid for.

Referring to the attitude of the trade to this movement, Mr. Adams stated that a great many florists and gardeners were either too apt to criticize or else do so much that they spoiled the best intention. He recommended to all such a study of the literature on the subject, and advised that they take one girl and get her interested, and through her this interest would be spread to other children. Above all, he emphasized that the work should not be criticised. He considered the school garden movement one of the biggest advertisements that the florist could have, and urged that the trade should concern themselves in this development. Money contributions were at all times serviceable as well as good advice, and donations of seeds if absolutely necessary. He referred to the work of the Massachusetts Agricultural College in training teachers for this purpose. The movement, he said, must grow slowly; the public must be reached, and this can best be done by the trade showing that they themselves were interested in the movement.

President Totty, in inviting discussion, spoke of the great revival in this class of work going on all over the country and the influence for good it was exerting.

Mr. O'Mara eloquently lauded the movement. The great question of to-day, he said, was how to train people that they can get out of the land the best that is in it at the least expense of labor. The men engaged in agricultural and horticultural pursuits at the present time constituted the real brain of the country. Many people were too prone to look with a certain contempt upon the men who were generally termed "hayseeds." These latter he considered the bone and sinew of every country. (Great applause.) He believed that every one engaged in the horticultural business should encourage movements of the kind spoken of by Mr. Adams. Such movements were bound to breed a class of people who would find outdoor employment more profitable than working, for instance, at the loom or other phases of mechanical industry.

E. G. Hill of Richmond, Ind., who was present, was called upon by the president, and told of his great interest in the subject under discussion, also what was doing in that direction in his home town where the children had recently given exhibitions of flowers they had grown. He believed that a great educational influence could be exerted by the proper planting of school gardens; shrubs could be laid out and flower beds planted as object lessons for the children.

Mr. Hill then referred to the forthcoming national flower show to be held at Chicago in November, 1908, under the auspices of the S. A. F. O. H., and asked the support of the Eastern florists and gardeners on that occasion. He said it should be distinctly understood that this show was national in its scope and

was not to benefit any particular section, but the whole country. He believed that it would be possible to get some of the best foreign tradesmen to send exhibits, and predicted that if the first show was made a success, it would become a fixed annual institution.

The meeting was then turned over to the entertainment committee, under the chairmanship of J. B. Nugent, Jr. Mr. Nugent had, as usual, a very interesting program, which included selections on the piano and violin by the two Burnett boys, sons of George Burnett, seedsman, and vocal and piano music by W. Woodill, whose efforts were very much appreciated; some good songs by the Rickards Brothers, who were in excellent form, also vocal solos by several ladies. Refreshments were provided for the ladies and gentlemen, and altogether a very pleasant evening was spent.

The E. G. Hill Company, Richmond, Ind., exhibited their two new roses, Rhea Reid and the Princess. The former seemed more pleasing in color than when last shown here, stem and foliage indicating a very healthy and strong habit. The Princess is of a beautiful shade of pink, and the form of the flower follows closely upon that of its parent, Mme. Caroline Testout. As a Winter bloomer it would seem to be a welcome addition to our pink varieties, the color being more of a pronounced pink than that of Killarney. A preliminary certificate was awarded both varieties. Charles Weber, Lynbrook, L. I., showed a vase each of Imperial and Pink Imperial carnations, also a vase of Aristocrat. The award committee asked that the latter variety be exhibited again, and as Imperial and Pink Imperial had previously been judged by the club's committee, no action was taken on these varieties.

WORCESTER COUNTY (MASS.) HORTICULTURAL SOCIETY.—The annual meeting of this society was held on November 6. The meeting, which was largely attended, started in a stormy manner, but peace was restored when G. C. Rice of Worcester was unanimously elected president. Other officers elected were: Vice-presidents, A. J. Marble, Charles Greenwood and E. W. Breed; secretary and librarian, A. A. Hixon. The society is very strong financially and is the most flourishing of any similar organization in New England.

Obituary

D. M. Ferry.

Dexter Mason Ferry, probably the most widely known business man of Detroit, Mich., and head of the world known seed house which bears his name, was found dead in his bed, Monday morning last, November 11, 1907, at his home, 1040 Woodward avenue. He had not been in robust health since the death of his wife, November 2, 1906, but did not seem to be suffering from illness, and his death came as a shock to the entire city. D. M. Ferry, Jr., and Dr. C. C. Miller, Mr. Ferry's brother-in-law, were summoned and the doctor decided that death had come from heart failure, although Mr. Ferry had not been known to have any trouble of the kind. It is believed that the end was the result of a gradual wearing out of the system, due to advancing age.

Mr. Ferry was 74 years old, having been born August 8, 1833. He began life a poor boy, the son of a wagonmaker in Lowville, Lewis County, N. Y., lost his father in 1836 and then his family removed to Penfield, eight miles from Rochester, N. Y. Here he attended the country school until he was sixteen years of age, when he engaged to work for a neighboring farmer for \$10 per month. Afterward he found employment in Rochester, which gave him the means to attend the high school there.

Going to Detroit in 1852, he obtained a position with the book and stationery house of S. Dow Elwood & Company, first as an errand boy, then as a salesman and later as a bookkeeper. His farm training, however, combined with his acquired knowledge of business, suggested to him the possibilities in the sale of seeds, and in 1856 he started the career that brought him fame and fortune. With M. T. Gardner he began business as the firm of M. T. Gardner & Company, the association of their interests lasting for thirteen years, when Mr. Ferry bought out his partner and assumed the management of the concern, changing the name to D. M. Ferry & Company. H. K. White, C. C. Bowen and A. E. F. White were his partners, and under their combined efforts the business grew rapidly until, in 1879, it had assumed such proportions that a corporation was organized with a paid up capital of \$750,000. The business has been uniformly prosperous, and even the great fire of January 1, 1886, by which the company suffered a loss of \$1,000,000, failed to check its growth, largely because of Mr. Ferry's executive ability, which was never more in evidence than at this period.

Mr. Ferry's interests were numerous. Banking, manufacture and transportation, besides art, charity and religion occupied his attention. He was one of the organizers of the art loan exhibit which grew into the Detroit Museum of Art, and was a trustee of Harper hospital, Olivet college and many other public institutions. In his mercantile relations, he was president of the First National Bank of Detroit and of the Union Trust Company, vice-president of the Wayne County Savings Bank, president of the Standard Life and Accident Company of Detroit, vice-president of the Michigan Fire and Marine Insurance Company, a director of the Detroit City Gas Company, the Michigan Mutual Insurance Company, the Detroit Copper & Brass Rolling Mills and the American Harrow Company, being also president of the last named company.

He was always a firm believer in Detroit's future. A considerable portion of his wealth was invested in real estate in the city and in enterprises which he believed would help to develop its growth. Among these were his ownership of the Woodward avenue building occupied by Newcomb, Endicott & Co., which he built in 1879, and his connection with the National Pin Company, which he established in 1875 and of which he retained the presidency throughout the remainder of his life.

Mr. Ferry did not take a prominent part in State politics until late in life. Always a Republican from

The Late D. M. Ferry

the time of the party's organization, he held several city positions, including a place on the Detroit Board of Estimators in 1877 and 1878 and on the Commission of Parks and Boulevards in 1884 and 1885. He was a delegate-at-large from Michigan to the Republican National convention at Minneapolis in 1892 and from 1896 to 1902 was chairman of the Republican State Central Committee.

Twice Mr. Ferry was a candidate for high office, entering the race for governor in 1900 against Sterns and Bliss and losing the nomination in the State convention on the nineteenth ballot, and again in 1902 announcing his candidacy for the United States Senate only to retire when General R. A. Alger was seen to be the choice of the State for the position.

He was domestic in his tastes and much of his life was spent in his family circle. For this reason he was not prominently connected with the clubs of the city, although he was a sustaining member of the Detroit Club, the Fellowcraft Club, the Detroit Fishing and Hunting Association, the Country Club, the Detroit Golf Club, the Detroit Light Guard and Detroit Grays. He donated Ferry field to the University of Michigan in 1902.

Three children survive, D. M. Ferry, Jr., Mrs. E. H.

Hooker of Greenwich, Conn., and Mrs. Avery Coonley of Riverside, Ill.

The sterling qualities of the deceased are too well known to require any recapitulation here, but perhaps at this time it may be pertinent to quote Mr. Ferry's version of doing a seed business. "Fifty years ago our business was established with very little capital other than an earnest purpose and a capacity for hard work. To-day we are not only the largest seed house in the world, but have acquired a store of experience and knowledge which we think entitles us to be considered authority on matters pertaining to the growth of the choicest varieties of flowers and vegetables. Our commercial success is due largely to a thorough understanding of this simple principle: 'Men do not gather figs from thistles.' In free competition those only succeed who are worthy of public confidence. We cannot afford to sacrifice reputation for temporary gain. As gardeners we are convinced of the necessity of sowing rightly, in order that we may reap abundantly; of the futility of trusting to luck. As merchants, therefore, we have aimed to give full value for whatever money we have received, and as a consequence our trade has increased beyond the highest hope." Such were the principles of honesty and integrity upon which Mr. Ferry lived and worked; is it any wonder that his memory is to-day honored by the entire seed trade of the world?

The interment took place in Woodmere Cemetery, where Mrs. Ferry was buried last year. In closing this most deserved tribute to the memory of one of our most respected and honored seedsmen, we quote the eulogy of Governor Warner of Michigan, spoken when he heard of Mr. Ferry's sudden death last Monday morning: "I consider that Michigan has lost one of her strongest citizens in the death of Dexter Mason Ferry. He contributed more than his share to the material advancement of Detroit, built up a great industry that will live, and ever had the best interests of the city at heart. To the State at large he was a great help in many ways, and his sudden and untimely end will be keenly felt by thousands of friends and acquaintances scattered in every portion of Michigan."

August Loeber.

August Loeber, late traveling salesman for Arthur T. Boddington, seedsman, New York, through the Southern and New England states, died Friday, November 8, at the New York Hospital after a protracted illness covering a period of more than six months. He caught cold last Spring; this developed into rheumatic fever, pneumonia, pleurisy and endocarditis of the heart, from which last he never really recovered and which was the ultimate cause of his demise.
